## Managing Digital Signage and Enterprise TV

---

Revised: March 17, 2008, OL-15762-02

Activation Software feature modules for Cisco DMS are purchased and licensed separately. Features are hidden from all users until you purchase and install the required license to use them, and even then remain hidden from users whose privilege levels are low. To understand feature licenses and learn how to install them, see [Managing Licenses for Features and Components of Cisco DMS, page 2-3](#). To learn how user access to features is restricted by the combination of licenses and user privilege levels, see [Understanding User Roles in DMS-Admin, page 2-9](#). To learn which software feature modules are available for you to purchase, see <http://www.cisco.com/go/dms>.

## Overview

The separately-licensed DMM software modules for digital signage (DMM-DSM) and Enterprise TV (DMM-ETV) consolidate certain features and interoperate in other ways. The privileges that your Cisco DMS administrator has granted to your username determine which features and user interface (UI) elements you are permitted to see and use in these modules.

- Features of DMM-DSM provide a flexible environment in which to create, manage, and run a digital signage network. Simple but powerful design and publishing features help you to create content libraries and deliver presentations for digital signage, while centralized management features help you to manage a global IP network of DMP displays for any purpose in conference rooms, public venues, or executive offices. Used well, DMM-DSM can help your organization to enhance customer experience, entertain, and inform.
- Features of DMM-ETV help your organization to deliver video-on-demand and live broadcast TV channels over your global IP network of DMP displays in conference rooms, public venues, or executive offices. You can search the interactive on-screen menus and program guides, and then show live news, financial information, sales and marketing messages, educational or training content for classrooms, corporate communications, entertainment, or any other type of content that is suitable for your purpose. Alternatively, hospitality and healthcare providers might use enterprise TV features in support of in-room IPTV.

**Tip** The firmware for DMPs provides a web-based "craft interface" to manage one DMP in isolation. This software is called Digital Media Player Device Manager, or DMPDM. To learn about DMPDM, check the printed quick start guide that shipped in the product kit with your DMP or check the corresponding version of the [User Guide for DMPDM](#) on Cisco.com.

## Starting DMM-DSM

### Procedure

**Step 1** If you just logged in to DMM or if you have been using features of a software module that is not related to digital signage, do one of the following:

- On the DMM dashboard, click **Digital Signage**.
- Choose **Digital Signage** from the global navigation.

## Related Topics

- [Configuring User Rights and Permissions for Digital Signage and Enterprise TV](#)

## Starting DMM-ETV

### Procedure

**Step 1** If you just logged in to DMM or if you have been using features of a software module that is not related to Enterprise TV, do one of the following:

- On the DMM dashboard, click **Enterprise TV**.
- Choose **Enterprise TV** from the global navigation.

The TV Channels tab is preselected by default. To understand elements on this tab, see [UI Reference: Elements to Manage TV Channels](#).

## Related Topics

## Working with Dashboard Gauges for Digital Signage and Enterprise TV

DMM-DSM and DMM-ETV share a dashboard that shows various gauges. This shared dashboard summarizes and centralizes all features for monitoring DMPs, schedules, assets, and settings for content delivery. Gauge data is not updated in real time; you must refresh your browser to refresh the data.

If problems of any kind interfere with the data-collection processes that populate these gauges, they will show question marks in addition to the best data that is available.

Click the Dashboard tab to load this dashboard in your browser.

**Tip** Click + or - in the title bar for a gauge to expand or collapse it.

Drag a gauge by its title bar to rearrange the dashboard. All gauges are made wide that load on the left side of the dashboard, and all gauges are made narrow that load on the right side.

- [Working with the Media and Schedules Gauge](#)
- [Understanding and Using the Digital Media Players Gauge](#)
- [Understanding and Using the Enterprise TV Gauge](#)
- [Understanding and Using the Settings Gauge](#)

### Working with the Media and Schedules Gauge

The Media and Schedules gauge represents differing types of data on its left and right sides.

- [Understanding the Left Side of the Media and Schedules Gauge](#)
- [Using the Left Side of the Media and Schedules Gauge](#)
- [UI Reference: Elements on the Right Side of the Media and Schedules Gauge](#)
- [Using the Right Side of the Media and Schedules Gauge](#)

### Understanding the Left Side of the Media and Schedules Gauge

The left side of the Media and Schedules gauge shows a read-only version of the deployment schedule that digital signage and Enterprise TV share. You can browse through the schedule timeline here and increase or decrease the magnification level for the range of hours that the gauge shows without your ever scrolling.

Figure 3-1 The Left Side of the Media and Schedules Gauge

This gauge describes only the midnight-to-midnight, 24-hour schedule for today. You can center it on the current hour and you can filter it to show only the events that are scheduled for a particular DMP group.

### Related Topics

- [Understanding and Using the Settings Gauge](#)

## Using the Left Side of the Media and Schedules Gauge

### Before You Begin

You must be logged in an administrator or as a user who has at least read-only permissions for the schedule.

### Procedure

Step 1 Do any of the following:

- Click Now to center the timeline on the current hour.
- Move the slider left or right to adjust magnification of the schedule timeline:
  - The far left position "zooms out" to show schedule magnification in 6-hour increments.
  - The far right position "zooms in" to show schedule magnification in 5-minute increments.
- If your browser window is small enough that it shows a horizontal scrollbar above the timeline, use this scrollbar to scroll the timeline left or right, where left is earlier in the day and right is later in the day.

- [Understanding and Using the Settings Gauge](#)

### UI Reference: Elements on the Right Side of the Media and Schedules Gauge

The right side of the Media and Schedules gauge counts and categorizes assets of various types that are saved in your media library, and also counts the playlists and presentations that are saved. In addition, it shows 10 categorized shortcuts.

Figure 3-2 The Right Side of the Media and Schedules Gauge

Shortcut	Description
All Digital Signage area	
All Digital Signage	Shows the sum total count of how many assets, presentations, and playlists are saved.

Presentations	Counts the number of presentations that your organization has designed and saved in DMD. Also, a shortcut to Digital Signage > Presentations. The dashboard does not show this information to you unless you are logged in as an administrator or as a user with sufficient permissions to see presentations.
Playlists	Counts the number of ordinary playlists that your organization has populated and saved in DMM-DSM. Also, a shortcut to selecting Digital Signage > Playlists. The dashboard does not show this information to you unless you are logged in as an administrator or as a user with sufficient permissions to see playlists.
Create Presentation	A shortcut that starts Digital Media Designer. See <a href="#">Getting Started with DMD</a> . The dashboard does not show this information to you unless you are logged in as an administrator or as a user with sufficient permissions to create presentations.
All Assets area	
<ul style="list-style-type: none"> <li>• HTML</li> <li>• IMAGES</li> <li>• UDP</li> <li>• FIRMWARE</li> <li>• FLASH</li> <li>• VIDEO</li> </ul>	Counts how many assets of each type are saved in the digital signage and Enterprise TV share in common. Also, shortcuts that open your media library, filtering the result to describe assets of only the specified type. The dashboard does not show this information to you unless you are logged in as an administrator or as a user with sufficient permissions to see assets in the media library.
Add Asset	Opens the Add Asset dialog box, from which you can add assets to your media library. The dashboard does not show this information to you unless you are logged in as an administrator or as a user with sufficient permissions to add assets to at least one category within the media library.

### Understanding and Using the Digital Media Players Gauge

The Digital Media Players gauge shows a colored bar chart to summarize the health of registered DMPs in your network and counts the number of configured DMP groups.

- The color green represents registered DMPs that are reachable.
- The color red represents registered DMPs that are unreachable. A registered DMP might become unavailable if it receives a new dynamic IP address from the DHCP server at its deployment site. In this case, you should restart the DMP or edit the IP address record that DMM-DSM maintains for the DMP.

Figure 3-3 The Digital Media Players Gauge

**Tip** The interval between DMP polling cycles is 5 minutes, so any newly added DMP might report temporarily that it is unavailable; wait a few minutes if this happens to you, and then check again. If you notice that any of your DMPs are unreachable, see *FAQs and Troubleshooting Guide for Cisco Digital Media System 4.x and 5.x* on Cisco.com.

To check the free space on the SD memory card in a DMP, choose Digital Media Players > DMP Manager, and then — in the row that describes that DMP — check the value in the Internal Storage MB. (Total/Free) column. Alternatively, log in to the local instance of DMPDM on that DMP, and then click Internal Storage.

**Note** DHCP servers at your deployment sites should be configured to expire leased IP addresses for DMPs only when DMPs are restarted. A registered DMP might become unavailable for centralized management if it receives a new dynamic IP address from the DHCP server at its deployment site. In this case, you should restart the DMP or edit the IP address record that DMM-DSM maintains for the DMP.

### Before You Begin

You must be logged in as an administrator or as a user with sufficient permissions to see at least one DMP or one DMP group.

### Procedure

- Step 1 Click View All DMPs and DMP Groups to learn more.

### Configuring Your DMPs to Support Centralized Management

You must configure your DMPs to recognize the authority of your DMM appliance, so that you can manage them centrally in DMM-DSM. This process occurs automatically when you autoregister DMPs, but if autoregistration is somehow not suitable, such as for testing purposes, you can also perform the required steps manually.

DMM-DSM and your DMPs communicate over TCP port 7777 when centralized management is enabled.

**Caution** To stop untrusted DMM appliances from being able to seize control of your DMPs, you must configure your network firewall to restrict which devices you will permit to send inbound traffic to your DMP over TCP port 7777. If you do not know how to work with access control lists, see the manufacturer documentation for your firewall.

---

**Caution** The DMPDM login username by default is `admin` and the password by default is `default`. However, we urged you to change both of these when you set up your DMPs, because they are well known and constitute a security vulnerability in your network. To learn how to change the login credentials if you skipped that essential step during setup, see the quick start guide on Cisco.com for your DMP model type.

---

## Procedure

---

Step 1 Point your browser to the IP address of a DMP that you will manage centrally.

Step 2 At the DMPDM login prompt, enter the username and the password that you configured for the DMP.

**Note** All DMPs that you manage centrally in DMM-DSM must share one identical set of login credentials for DMPDM. To learn how to reconfigure your DMPs so that they all share identical credentials, see the quick start guide for your DMP model type on Cisco.com.

**Step 3** Click **Centralized Management** in the Settings area, and then enter the required values:

- DMM Appliance IP Address — The IP address of your DMM appliance.
- DMM-DSM Server Timeout (in seconds) — The maximum number of seconds that your DMP should wait for a response from your DMM appliance.

**Step 4** Click **Apply** to confirm your entries and to implement them until you change them or until you restart the DMP.

**Step 5** Click **Save Configuration** in the Administration area to make your configuration changes permanent even after you restart your DMP, and then (after you see the Save Configuration page) click **Save**.

**Step 6** Click **Restart DMP**, and then (after you see the Restart DMP page) click **Restart**.

#### Related Topics

- [Managing and Grouping Your DMPs](#)
- [Adding and Editing DMP Groups, and Autoregistering DMPs to Populate Them](#)
- [Adding and Editing One DMP Manually](#)

#### Enabling the YPbPr (Component Video) Interface on DMPs

To take advantage of the latest features, options, and modern technologies, most digital signage environments use digital displays. However, some networks might include legacy devices and technologies, including analog displays. If you use analog displays or have any other reason to use YPbPr component video cables when you connect your DMPs to their displays (and if your DMPs use firmware release 5.0.0 or 5.0.1) you must first enable the YPbPr interface on your DMPs.

**Tip** This procedure is not necessary for DMPs that use firmware release 5.0.2, 5.0.3, or 5.1, where DMPDM includes Component as a selectable video signal type.

#### Procedure

**Step 1** Choose **Digital Media Players > Advanced Tasks**, and then click the **System Tasks** row in the Application Types list.

**Step 2** Click  **Add New Application**.

**Step 3** After the page is refreshed, choose the required options and enter the required values for this task:

- a. Enter `DMP_Enable_YPbPr_(Component_Video)` in the Name field.
- b. Enter `Enable DMP support for Component Video output on the YPbPr` in the Description field.
- c. Choose `Set` from the Request Type list.
- d. Enter `sigma.conn=6&sigma.tvst=91&sigma.cspc=1&mib.save=1` in the Request field.

**Step 4** Click **Submit** to save your selections.

**Step 5** To deploy to any of your DMPs the "DMP\_Enable\_YPbPr\_(Component\_Video)" task that you defined and saved, see [Scheduling Time Slots for Media and Events on DMPs](#).

#### Managing and Grouping Your DMPs

Features available to you on the DMP Manager page (at Digital Media Players > DMP Manager) can help you to:

- Organize your DMPs in groups.
- Manage DMPs collectively instead of managing only one DMP at a time.
- Deploy assets or instructions to DMPs immediately.
- Manage the DMP displays in your network.

When you choose options anywhere on the DMP Manager page, it is updated automatically to show the options and features that are relevant to your selection.

DMP Groups	

<p><i>A hierarchical tree (an object selector) of DMP groups, subgroups, and DMPs. Here, you can add or remove group assignments for registered DMPs, create new groups, edit existing groups, and choose which DMPs the DMP List table should describe.</i></p>		
Add New DMP Group		Shows the Add New DMP Group pane.
Edit DMP Group		Shows the Edit DMP Group pane, where you can edit attributes of the group that you highlighted.
Delete DMP Group		Deletes the group that you highlighted.
Opened Group		Shows the list of group members until you click to hide them.
Closed Group		Hides the list of group members until you click to show them.
DMP		A DMP that you assigned to the relevant parent group.
<p><b>DMP List</b></p> <p><i>All DMPs at (or below) the highlighted level in the DMP Groups object selector, or the DMPs at this level that match your criteria for filtering this list. To see every registered DMP in your network, click the group that represents the root level. (By default, its name is "All DMPs" but this name is editable.) If there are more DMPs than there are rows, the list might straddle multiple pages. In this case, use pagination controls above the table to move from one page to another.</i></p>		
Actions	List from which to select any instruction or asset that you might send to DMPs.	
Add New DMP		Shows the Add New DMP pane.
Edit DMP		Shows the Edit DMP pane.
Delete DMP		Deletes the DMP that you highlighted.
Control TV		Opens the LCD Control dialog box.
Assign DMP to Group		Creates an association between at least one DMP and at least one group.
Remove DMP from Group		Severs the association between at least one DMP and at least one group.
Filter	A method to redraw the DMP List table, so that it includes only the DMPs that match your filter.	
Display Number	The maximum number of rows that the table should show per page if it straddles multiple pages.	
Status	<p>Says whether a DMP is reachable.</p> <ul style="list-style-type: none"> <li>• A green icon (✓) tells you that the DMP is connected to a power source, uses a known IP address, and is reachable.</li> <li>• A red icon (✗) tells you that the DMP is unreachable.</li> </ul>	

Name	A unique and human-readable name that you entered or that DMM-DSM chose; If DMM-DSM chose the name, it is either the DMP IP address or MAC address.
IP	The public IP address at which the DMP receives instructions and data from DMM-DSM.
Version	The release number for the installed firmware version on the DMP.
Description	The description that you entered.
Internal Storage MB. (Total/Free)	Measures the total storage capacity of the internal flash drive, and then measures the available capacity.
External Storage MB. (Total/Free)	Measures the total storage capacity of the external USB drive, if the DMP is connected to one, and then measures the available capacity.
WAAS Status	Says that a DMP has mounted a CIFS share, or does not say anything.

#### Adding and Editing DMP Groups, and Autoregistering DMPs to Populate Them

**Note** DMM-DSM uses TCP port 7777 to communicate with DMPs. This port is open on DMPs and you cannot close it.

When you create or edit a DMP group, the least that you must do is specify the group name and description. In addition, you can populate the group automatically with all of the DMPs in any NMAP address range that you specify, or you can manually add DMPs to a group.

#### Before You Begin

- The DMPs in your digital signage network must all share identical user credentials for their DMP Web Account and identical user credentials for their DMP Service Account. Otherwise, autoregistration cannot occur. To learn more, see the quick start guide on Cisco.com for your DMP model type.
- Verify that the "Enable TAC Troubleshooting Access" option in DMPDM is not disabled. (It is enabled by default.) If you disable it, autoregistration cannot occur.
- Verify that the routers, switches, and firewalls between your DMM appliance and the CIDR address range for autodiscovery allow TCP port 7777 to send and receive packets, and that they allow ICMP traffic to pass from your DMM appliance to your DMPs. If any of this traffic is blocked anywhere along its route, autoregistration cannot occur.
- If you have more than one DMM appliance, be careful to autoregister only those DMPs that you are not already managing centrally from another instance of DMM-DSM. Otherwise, you might temporarily disrupt the deployment of presentations and their assets in your digital signage network. When you autoregister DMPs that are not currently registered in DMP database on your DMM appliance, they restart immediately even if they are already centrally managed by a different DMM appliance than the one that you are using, and even if they are showing presentations on their attached DMP displays.
- We recommend that you autoregister DMPs after normal business hours. Autoregistration of 5,000 DMPs takes approximately 4 minutes in a fast network and does not use polling.

#### Procedure

**Step 1** Choose Digital Media Players > DMP Manager.

**Step 2** Do either of the following:

- Click the  Add New DMP Group icon above the DMP Groups object selector.

- Click the name of a DMP group to choose it in the object selector, and then click the  Edit DMP Group icon above the object selector.

Step 3 Enter a name and a description for the group.

Step 4 Define the network ranges from which to autoregister DMPs that should be added as members of this DMP group. Alternatively, if you will not autoregister DMPs now, you can skip this step.

Tip DMM-DSM runs each autodiscovery job one time. It does not look continuously in the specified network range for DMPs that you might add in the future. If you plan to add DMPs to your network continuously, you can schedule an autodiscovery event to recur as often as necessary.

Step 5 Click Submit to save your work. You can save a named group for use in the future, even if you have not yet assigned any DMPs to it.

#### Understanding the Sequence of Operations for DMP Autoregistration

Autoregistration finds every DMP in the subnets that you specify and then configures these DMPs to know and trust the IP address for your DMM appliance. It restarts the DMPs and then registers them in DMM-DSM for centralized management. Autoregistration operations follow this sequence:

1. DMM-DSM scans every device in the specified address range, looking for devices where TCP port 7777 is open.
2. DMM-DSM confirms which of the devices with port 7777 open are DMPs.
3. DMPs receive information about your DMM server, and are then instructed to restart.
4. Upon restarting, DMPs transmit updated information about themselves to DMM-DSM and set their own status to "Up."
5. DMM-DSM generates new database records for all DMPs that are newly autoregistered, assigns these DMPs to any DMP groups corresponding to the address range that you entered, and assigns them to the "All DMPs" group.

##### Navigation Path

Digital Media Players > DMP Manager

Table 3-3 Elements to Add and Edit DMP Groups

Element	Icon and Description
	 Add New DMP Group or  Edit DMP Group icon above the DMP Groups pane.
Name	A unique and human-readable name for the group.
Description	A brief description of the group and its purpose.

Add New Range		<p>IP address subnet ranges in which to find and autoregister DMPs.</p> <ul style="list-style-type: none"> <li>The netmask typically is /24.</li> <li>To find every DMP in a subnet, use 0 (zero) as the only digit in the fourth quad, such as 192.0.2.0/24.</li> <li>To find one DMP whose address is already known to you, enter its IP address and the netmask but use a comma instead of the fourth dot, such as 192.0.2.50/24.</li> <li>To find all of the DMPs in a narrow range of addresses, substitute a range for the fourth quad, such as 192.0.2.1-254.</li> <li>The address range can span one subnet or multiple subnets.</li> </ul> <p><b>Note</b> You can schedule multiple DMP autoregistration operations to run simultaneously if they all search the same one subnet. If the DMP autoregistration operations that you configure do not all search the same one subnet, you should not schedule them to run simultaneously. If you do, only the first such operation will run and DMM-DSM will not show any error message to explain why the other autoregistration operations failed to find any DMPs. If you must run DMP autoregistration tasks that search different subnets, schedule a 35-minute interval between the start time for one autoregistration and the start time for the next autoregistration. In a very large network that contains thousands of DMPs, the required interval might be longer than 35 minutes.</p>
Delete a Range		Deletes the range that you highlighted.
Automatic Grouping Ranges	Shows a list of all the defined NMAP address ranges. Click a range to edit it.	
Range (CIDR)	The field where you edit one CIDR address range at a time.

#### Understanding the Effect of Nesting One DMP Group Inside Another

We recommend that you create DMP groups to organize your DMPs according to characteristics that they have in common, such as where or how you will use them, according to whatever logic works best for you. For example, the logical basis for your DMP groups might be geographic (by state, province, or metropolitan area) or corporate (by product team, sales region, time zone, primary spoken language, or type of facility), as in this illustration:

One DMP group can contain another and each choice that you make for centralized management propagates from parent (DMP group), to child (DMP subgroup or DMP), to grandchild (DMP). There is no maximum number of levels that you can add to the hierarchy, but a simpler organization is more scalable than an unreasonably complex one would be.

We recommend that you do not assign any DMP to the root level in the hierarchy, due to the complexity of management, but we do not prevent you from doing this.

#### Deleting DMP Groups

##### Procedure

- Step 1 Choose Digital Media Players > DMP Manager.
- Step 2 Navigate in the DMP Groups object selector, expanding its levels as necessary until you find in its hierarchy the DMP group to be deleted.
- Step 3 Click the name of this DMP group in the object selector.
- Step 4 Click Delete DMP Group, above the object selector.
- Step 5 Click Submit to delete the group. Alternatively, click Cancel to stop this deletion.

Adding and Editing One DMP Manually

**Caution** DMM-DSM includes a feature to autoregister your DMPs so that you do not have to register each DMP manually. Nonetheless, you can register a DMP manually for testing purposes.

We recommend that you never use this method to register a DMP manually, except in a lab for testing purposes. This method is neither suitable nor scalable in a production network.

Later, when autodiscovery finds and adds this same DMP, a new entry will be added for it in addition to the entry that you added manually. This duplication causes an IP address conflict, which interferes with normal operation and triggers an alarm in DMS-Admin.

Procedure

Step 1 Choose Digital Media Players > DMP Manager.

Step 2 Do either of the following:

- Click the  Add New DMP icon above the DMP List table.

- Click the name of a DMP group to choose it in the object selector, and then click the Edit DMP icon above the DMP List table.

Step 3 Choose options and enter required values for the DMP.

Step 4 Click Submit to save your work. Alternatively, click Clear to discard your work.

Step 5 (Optional) Add the DMP to a DMP group.

## Filtering the DMP List Table

### Procedure

---

Step 1 Choose Digital Media Players > DMP Manager.

Step 2 Click the entry in the DMP Group object selector for a group whose list of member DMPs you will filter.

Step 3 Choose an option from the Filter list, above the DMP List table:

- Status — Select Up or Down to limit matches by DMP availability.
- Name — Enter the text string to limit matches by DMP name.
- IP — Enter any part of the "dotted quad" to limit matches by DMP IP address.
- MAC — Enter the text string to limit matches by DMP MAC address.
- Description — Enter the text string to limit matches by DMP descriptions.
- Version — Enter the text string to limit matches by DMP firmware release version number.

Step 4 (Optional) Enter a number in the Display # field to specify how many rows of data the DMP List table should load per page.

When there are more DMPs than there are rows per page, the table straddles multiple pages.

Step 5 (Optional) If DMP data in the table straddles multiple pages, use pagination controls above the table to move between pages.

Step 6 Click Go.

---

## Understanding HTTP Proxy Implications for DMPs

Important considerations apply to your digital signage network if any of your DMPs uses an HTTP proxy server. It is unusual and not scalable to manage many DMPs that share one HTTP proxy server. We recommend that your DMPs *should not* use HTTP proxy servers.

- If your DMPs must use proxied connections, we recommend that you configure them to use Web Cache Communication Protocol (WCCP) instead of using a proxy server. WCCP reroutes HTTP requests transparently. To learn how to use WCCP if you do not already know how, see Cisco.com.
- To configure one DMP to use one proxy server, use DMPDM, not DMM-DSM. See the "Adjusting Basic Network Settings" topic in *User Guide for Cisco Digital Media Player Device Manager 5.1* on Cisco.com.

## Related Topics

- [Configuring Multiple DMPs to Share One HTTP Proxy Server](#)

## Configuring Multiple DMPs to Share One HTTP Proxy Server

You can configure multiple DMPs to share one HTTP proxy server, even though we recommend that you do not.

## Procedure

Step 1 Choose Digital Media Players > Advanced Tasks.

Step 2 Click System Tasks in the list of defined tasks, and then click  Add New Application.

Step 3 Enter a name and description.

Step 4 Choose Set from the Request Type list and use this syntax in the Request field: `init.BROWSER_PROXY=<on|off>&init.BROWSER_PROXY_IP=<proxy_server_IP_address>&init.BROWSER_PROXY_PORT=<proxy_server_logical_port>`.

For example, if the proxy server uses 192.168.12.12 as its IP address and delivers proxy services through port 5678, the Request string would look like this: `init.BROWSER_PROXY=on&init.BROWSER_PROXY_IP=192.168.12.12&init.BROWSER_PROXY_PORT=5678&mib.save=1&mng.reboot=1`.

To remove that example proxy, you would choose Set from the Request type list, and then enter this Request string: `init.BROWSER_PROXY_IP=&init.BROWSER_PROXY_PORT=&init.BROWSER_PROXY=off&mib.save=1&mng.reboot=1`.

- [Using RS-232 Commands to Manage Cisco LCD Professional Series Displays](#)

## Managing DMP Displays That Are Attached to Your Centrally-Managed DMPs

### Before You Begin

- Prepare any Cisco LCD Professional Series displays for centralized management through a DVI or HDMI signal cable.
- Connect your DMPs to your DMP displays with signal cables that can relay RS-232 commands.
- Use the system task that activates RS-232 command access for the brand of DMP display to be managed centrally.
  - If the DMP display brand is Cisco or NEC, the system task to use is: RS-232: Control supported, non-DMTech displays.
  - If the DMP display brand is DMTech, the system task to use is: RS-232: Control DMTech displays.

## Procedure

Step 1 Choose Digital Media Players > DMP Manager.

Step 2 Do either of the following:

- Navigate in the DMP Groups object selector, expanding its levels as necessary until you find in its hierarchy the parent group for a DMP whose attached DMP display should receive instructions. Then, click the name of this DMP group in the object selector.
- Choose an option from the Filter list to restrict which DMPs the DMP List table describes.

Step 3 (Optional) If DMP data in the table straddles multiple pages, use pagination controls above the table to move between pages.

Step 4 Click a DMP in the DMP List table to choose it. Alternatively, use check boxes in the table to choose multiple DMPs that are all attached to identical DMP displays.

Step 5 Click  Control TV, above the DMP List table.

Step 6 Use options in the LCD Control dialog box to configure these DMP displays.

Step 7 Click Submit to save your work in the LCD Control popup window. Alternatively, click Cancel to discard your work.

- [RS-232 Command Reference for Cisco LCD Displays](#)

#### Preparing a Cisco LCD Display for Centralized Management Through DVI

When you use an HDMI cable or a DVI cable to connect your DMP to an LCD display model from the Cisco LCD Professional Series, you can use DMM-DSM to centrally manage the LCD display.

When HDMI is the connection type from a DMP to a Professional Series display, centralized management from DMM works immediately, without any prerequisites. However, when DVI is the connection type, you must complete a simple task at the physical installation site for your LCD display before you can start to centrally manage it.

#### Before You Begin

- Use the system task that activates RS-232 command access for your Professional Series display. The system task to use is: RS-232: Control supported, non-DMTech displays.

#### Procedure

---

Step 1 Do either of the following:

- On the remote control for your LCD display, press Menu.
- On the front panel of your LCD display, press Menu.

Step 2 Choose Input > Source List > DVI, and then press Enter.

Step 3 Choose Input > Edit Name > DVI > HD STB, and then press Enter.

#### Related Topics

- [RS-232 Command Reference for Cisco LCD Displays](#)
- [Managing DMP Displays That Are Attached to Your Centrally-Managed DMPs](#)

#### RS-232 Command Reference for Cisco LCD Displays

You can use RS-232 command strings for centralized management of LCD display models (LCD-100-Pro-40N and LCD-110-Pro-52S) from the Cisco LCD Professional Series:

- [Turning the Display On and Off](#)
- [Muting and Unmuting the Display](#)
- [Adjusting Brightness](#)
- [Adjusting Colorfulness](#)
- [Adjusting Contrast](#)
- [Turning the Remote Control On and Off](#)
- [Locking and Unlocking the Display and Its Remote Control](#)

#### Before You Begin

- Prepare Cisco displays for centralized management through a DVI or HDMI signal cable.
- Deploy the system task that activates RS-232 command access for your Professional Series display. The system task to use is: RS-232: Control supported, non-DMTech displays.

Table 3-10 RS-232 Commands to Manage LCD Professional Series Displays Remotely

Task	RS-232 Syntax
Turning the Display On and Off	
Turn on the display	rs232.tx_hex=aa11fe010111
Turn off the display	rs232.tx_hex=aa11fe010010
Muting and Unmuting the Display	
Mute the display	rs232.tx_hex=aa13ff010114
Unmute the display	rs232.tx_hex=aa13ff010013
Adjusting Brightness	
Set brightness to 50 percent	rs232.tx_hex=aa25ff013257
Set brightness to 75 percent	rs232.tx_hex=aa25ff014b70
Set brightness to 100 percent	rs232.tx_hex=aa25ff016489
Adjusting Colorfulness	
Set colorfulness <sup>1</sup> to 50 percent	rs232.tx_hex=aa27ff013259
Set colorfulness to 75 percent	rs232.tx_hex=aa27ff014b72
Set colorfulness to 100 percent	rs232.tx_hex=aa27ff01648b
Adjusting Contrast	
Set contrast to 50 percent	rs232.tx_hex=aa24ff013256

Set contrast to 75 percent	rs232.tx_hex=aa24ff014b6f
Set contrast to 100 percent	rs232.tx_hex=aa24ff016488
Turning the Remote Control On and Off	
Turn on the remote control	rs232.tx_hex=aa36ff010137
Turn off the remote control	rs232.tx_hex=aa36FF010036
Locking and Unlocking the Display and Its Remote Control	
Lock all features	rs232.tx_hex=aa5dff01015e
Unlock all features	rs232.tx_hex=aa5dff01005d

<sup>1</sup> An image with a colorfulness value of zero percent is grayscale, while the same image with a colorfulness value of 100 percent has vivid colors.

## Configuring the Settings for Enterprise TV

Activation Software feature modules for Cisco DMS are purchased and licensed separately. Features are hidden from all users until you purchase and install the required license to use them, and even then remain hidden from users whose privilege levels are low. To understand feature licenses and learn how to install them, see [Managing Licenses for Features and Components of Cisco DMS, page 2-3](#). To learn how user access to features is restricted by the combination of licenses and user privilege levels, see [Understanding User Roles in DMS-Admin, page 2-9](#). To learn which software feature modules are available for you to purchase, see <http://www.cisco.com/go/dms>.

An administrator uses DMM-ETV to:

- Customize on-screen menus with a logo and a skin.
- Configure video channel assignments.
- Specify what channels and programs should be available to the DMP displays where your organization will deploy Enterprise TV, and when they should be available.

An on-premises operator uses a handheld remote control unit or an emulated remote control to navigate through live video channel menus, change channels, and select from video-on-demand categories.

- [Understanding Restrictions for Enterprise TV](#)
- [Choosing Where in Your WAN to Show Live or On-Demand Programming](#)
- [Understanding the Typical Workflow for Enterprise TV](#)
- [Configuring Settings for TV Channels](#)
- [Configuring Subscription Settings for EPG Providers](#)
- [Configuring Enterprise TV Settings for Video on Demand](#)
- [Using 'Skins' to Customize the Enterprise TV Menu System](#)
- [Emulating the DMP Remote Control for Enterprise TV](#)

## Understanding Restrictions for Enterprise TV

- Video-on-demand (VoD) features for Enterprise TV depend upon the media library features for digital signage. Therefore, even though the DMM-ETV and DMM-DSM software modules are licensed separately and can operate independently of one another in most ways, you cannot use the VoD features for Enterprise TV unless you have installed the licenses for *both* DMM-ETV and DMM-DSM.
- The features for Enterprise TV in this release support 99 or fewer channels of live broadcast programming and VoD programming, combined.
- Any digital encoders that you use for live broadcast channels must adhere to the MPEG2-TS standard for streaming and must support at least one of these codecs:
  - MPEG1
  - MPEG2
  - MPEG4/h.264 (supported on DMP 4400G endpoints only)

For this reason, we recommend that you use a Scientific Atlanta 9032SD encoder or 9050HD encoder to encode the video streams that your DMPs use for Enterprise TV channels.

## Choosing Where in Your WAN to Show Live or On-Demand Programming

### Programming Factors to Consider

**Live** Organizations that use Enterprise TV tend to show live video programming at their sites with the greatest bandwidth capacity, such as their main site. Live video programming is not suitable for remote branch offices with low bandwidth capacity.

VoD Remote branch offices are better suited to VoD programming than they are to live video programming. Common use cases for VoD programming include training and executive communications. We recommend that you use a content delivery system to provision the assets for your VoD programming, particularly if your remote sites have low bandwidth capacity.

## Understanding the Typical Workflow for Enterprise TV

This topic describes the ordinary workflow for Enterprise TV.

### Before You Begin

- Install the license for Enterprise TV on your DMM appliance.
- Deploy DMPs and DMP displays to the sites where you will show Enterprise TV.
- For live TV — Negotiate with a cable or satellite TV service in your region for the right to redistribute their package of TV channel signals, in whole or in part.
- For live TV — Configure one Scientific Atlanta 9032SD encoder or 9050HD encoder apiece for each TV channel signal that you will stream in real time.

	Workflow	Actions
Step 1	Use elements on the Skin Customization tab to enable or disable the electronic program guide (EPG) for Enterprise TV. When it is enabled, people at your deployment sites can use a handheld remote control unit or an emulated remote control to browse on-screen program listings and choose programs to watch.	a. See <a href="#">Using 'Skins' to Customize the Enterprise TV Menu System</a> .
Step 2	If you will use an EPG, choose a channel description population method for each channel that the EPG will describe.	<ul style="list-style-type: none"> <li>• See <a href="#">Understanding Supported Methods to Populate EPG Channel Descriptions</a></li> </ul> You can skip this task if you will not use the EPG.
Step 3	If you will use an EPG and populate its channel descriptions from an EPG data subscription, define the settings for that subscription.	Use elements on the EPG Providers tab to: <ol style="list-style-type: none"> <li>Enter login credentials for your subscription. See <a href="#">Adding or Editing Subscriptions to Data from an EPG Provider</a>.</li> <li>Obtain and then synchronize the schedule and description data for programs. See <a href="#">Synchronizing TV Channel Schedules and Program Descriptions for the EPG</a>.</li> </ol>
Step 4	If your DMM appliance does not have direct Internet access and should use a proxy server to obtain data from your preferred EPG data service provider, configure a SOCKS proxy for Enterprise TV.	a. See <a href="#">Proxy Settings (Optional)</a>

### Configuring Settings for TV Channels

- [UI Reference: Elements to Manage TV Channels](#)
- [Adding New Channels](#)
- [Editing Channels](#)
- [Reassigning Channel Numbers](#)
- [Deleting Channels](#)
- [Listing Only the Defined \(Active\) or Undefined \(Inactive\) TV Channels](#)

### UI Reference: Elements to Manage TV Channels

#### Navigation Path

Enterprise TV > TV Channels

The TV Channels table describes the defined and undefined TV channels for your network and includes features that help you to manage these channels.

Table 3-11 Elements of the TV Channels Table

Element	Description

Channel View list	Enables or disables a filtered view of which channels this table describes, based on which option you choose: <ul style="list-style-type: none"> <li>• <b>All Channels</b> — Shows the combination of all defined and undefined channels.</li> <li>• <b>Active Channels</b> — Shows only the defined channels.</li> <li>• <b>Inactive Channels</b> — Shows only the channels that are not yet defined.</li> </ul>
Channel Number	One numeral per row, in the range from 1 to 99, where any numeral can be the TV channel number that you associate with a particular multicast stream. The default behavior for this table is that it shows all 99 possible channel numbers, one per row. Your choice from the Channel View list might limit how many rows the table contains, and this can affect indirectly how many channel numbers you see. If you sort the table by clicking a column heading, channel numbers might be rearranged temporarily into an unrecognizable sequence. To sort channels back into the expected sequence if their sequence has become unrecognizable, click the Channel Number column heading.
Channel Name	Blank when the corresponding row describes an undefined TV channel. Otherwise, shows a value that you entered or an option that you chose from a list when you defined the channel. To understand these values, see <a href="#">Table 3-12</a> .
Description	
Multicast Address: Port	
Call Letters for Channel	
Reassign to Nearest Unused Channel	Two buttons, either of which can change the association between a channel definition and a channel number. The channel definition in the corresponding row becomes associated instead with the closest channel (of a higher number or a lower number, respectively) that is undefined. These buttons have no effect when every channel is already defined. The first row and last row of this table will only ever show one of these buttons apiece. These rows differ from all other rows in the table because you cannot use any channel number that is lower than the lowest supported channel number or higher than the highest supported channel number. The first row shows only  , while the last row shows only  . <ul style="list-style-type: none"> <li>•  — Associates the channel definition that the corresponding row describes with whichever <i>lower-numbered</i> channel is nearest among the undefined channels. The arrow points up because table rows above this row are reserved for lower-numbered channels.</li> <li>•  — Associates the channel definition that the corresponding row describes with whichever <i>higher-numbered</i> channel is nearest among the undefined channels. The arrow points down because table rows above this row are reserved for higher-numbered channels.</li> </ul>
Actions	One of these: <ul style="list-style-type: none"> <li>• <b>Set Up Channel</b> — Opens the dialog box where you can enter values and define attributes for a TV channel. This button is visible only in rows that describe undefined TV channels.</li> <li>•  — A list from which you can choose one of the following options. This list is visible only in rows that describe defined TV channels. <ul style="list-style-type: none"> <li>– <b>Edit Channel Settings</b> — Opens the dialog box where you can edit the values and attributes of a channel that is already defined.</li> <li>– <b>Reassign to Any Unused Channel</b> — Associates the channel definition that the corresponding row describes with whichever channel is nearest among the undefined channels. The new channel number might be higher or lower than whichever channel number was in effect until you changed it.</li> <li>– <b>Delete This Channel</b> — Deletes all entries and attribute values from the definition of the channel that the corresponding row describes. The relevant channel number will not be associated with any defined channel unless or until you define a new channel for it or associate an existing channel with it.</li> </ul> </li> </ul>

#### Adding New Channels

You can define many attributes for a new TV channel in your lineup. Permitted channel assignments range from 1 to 99.

**Tip** When you plan how many TV channels to configure, consider the actual bandwidth capacity in your WAN and at each remote site where you will show Enterprise TV. The typical rate of bandwidth consumption will be in the range from 2 Mbps to 16 Mbps per channel, per site.

#### Procedure

Step 1 Click the TV Channels tab.

Step 2 In the Channel Number column, identify the channel to be defined and then, in the corresponding row, click Set Up Channel in the Actions column.

The Add a New Channel dialog box opens.

Step 3 Choose the options or enter the values that meet your requirements.

Step 4 Do one of the following:

- To save your entries, click Add a Channel.
- To discard your entries, click Cancel.

## Understanding Supported Methods to Populate EPG Channel Descriptions

### Using Generic Channel Descriptions

You can disassociate a channel from all EPG data sources. In this case, the only information that an EPG will show about the channel is exactly the text that you enter in the Text to Show if Program Guide is Not Available field. This brief message, which you enter one time, describes the channel in a broad and general sense, and straddles all time slots.

### Using Channel Descriptions from a CSV File

You can enter descriptions into a CSV file for each program that a channel will show. With this method, you can have and use an EPG without entering into a subscription contract. To populate an EPG completely, you must create and upload a separate CSV file for every channel that your EPG should include. EPG provider-related prerequisites do not apply if your channel will use programming data from a CSV file.

There are strict requirements for what constitutes a valid CSV file. It must use syntax and formatting that are perfectly consistent with output from a downloadable Microsoft Excel format template that we provide for your use. We strongly recommend that you derive your CSV files from the free template. Click [Download the CSV Template](#) to obtain a copy of the template, and start using it to define the EPG attributes for programs on one channel. You can define the attributes for only a few programs or for as many as 14 days of programs.

Populate fields in the template as follows, where each table row contains the attributes for one program in the EPG for the corresponding TV channel:

- **Date** — The date and time of day when one described program will start. Start times for programs in your CSV file must use the format MM/DD/YY HH:mm.
- **Duration** — The total running time for the described program. Duration values for programs must use numerals, which indicate the total duration in minutes.
- **Title** — The title that the program guide should show for the described program. Program titles are limited to a maximum of 23 characters. If the text to be displayed in a program title should show any visible quotation marks, you must enter exactly \" for each quotation mark that should be visible.
- **Description** — The actual description that the program guide should show for the program. Descriptions are limited to a maximum of 50 characters. If the text to be displayed in your program guide should show any visible quotation marks, you must enter exactly \" for each quotation mark that should be visible.

Define the attributes for programs on one channel, and then save and upload your CSV file.

### Using Channel Descriptions from a Data Subscription

You can negotiate with a vendor of programming data to establish a paid subscription, by which you will gain automatic access to current program schedules and descriptions for multiple channels. Before your channel can use any EPG data from a subscription provider, you must enter your subscription details and synchronize data on the EPG Providers tab. Then, you must configure the channel on the TV Channels tab. The supported data formats are:

- **TMS** — Your EPG will use Tribune Media Services data to describe the channel and its programs.
- **<XMLTV>** — Your EPG will use data in the XMLTV format to describe the channel and its programs. The provider name here is not necessarily "XMLTV." Instead, it matches exactly what you entered for the provider name when you configured your subscription settings, assuming that you have an XMLTV data subscription.

## UI Reference: Elements to Define Channel Settings

### Navigation Path

- Enterprise TV > TV Channels > Set Up Channel
- Enterprise TV > TV Channels >  > Edit Channel Settings

Table 3-12 Elements for Channel Definition

Element	Description

Your Name for This Channel	A meaningful, brief, and unique description of the channel that the corresponding row describes, such as China Central Television, Univision, Al-Jazeera, BBC-1, Star Cricket, HBO, or CNN.
Address Type	The method (multicast or HTTP) that your DMPs will use to receive the video stream for this channel. Choose an option from the list to enter the correct kind of address. Your choice determines which other fields appear on this page. The options are: <ul style="list-style-type: none"> <li>• Multicast Address — The routable IP address and UDP port for a streaming server, as described in the "<a href="#">Multicast Address: Port</a>" row elsewhere in this table.</li> <li>• HTTP URL — The full HTTP URL for one video file of a supported type, as described in the "<a href="#">HTTP URL</a>" row elsewhere in this table.</li> </ul>
Multicast Address: Port	The IP address and port number of the streaming server from which your DMPs will receive the multicast stream for this channel. You must specify the port number. This field is visible only after you choose Multicast Address from the Address Type list. If you later choose any other option from the Address Type list, DMM-ETV will ignore the values in this field.
HTTP URL	The exact URL and path that points to one MPEG video file on an HTTP server. You must use HTTP as the protocol and the filename extension must be MPG. This field is visible only after you choose HTTP URL from the Address Type list.
Text to Show if Program Guide is Not Available	Text that describes this channel. The electronic program guide (EPG) shows this text when no other information is available. When the EPG uses this text, it does not describe individual programs for this channel. See <a href="#">Using Generic Channel Descriptions</a> .
EPG Provider	Associates or disassociates this channel with one EPG data source and specifies the nature of that source if you associate one with this channel. You can choose whether to use any data source. The options are similar to these: <ul style="list-style-type: none"> <li>• TMS — Your EPG will use data from Tribune Media Services to describe this channel and its programs. See <a href="#">Using Channel Descriptions from a Data Subscription</a>.</li> <li>• &lt;XMLTV&gt; — Your EPG will use data in the XMLTV format to describe this channel and its programs. See <a href="#">Using Channel Descriptions from a Data Subscription</a>.</li> <li>• Upload CSV — Your EPG will use data from a CSV file to describe this channel and its programs. See <a href="#">Using Channel Descriptions from a CSV File</a>.</li> <li>• None — Your EPG will use a brief, generic statement to describe this channel and its programs. See <a href="#">Using Generic Channel Descriptions</a>.</li> </ul> <p>Note EPG data <i>is not required</i> for Enterprise TV to work. You can use options at Enterprise TV &gt; Skins Customization to enable or disable the EPG for Cisco DMS. You are not required to subscribe to any EPG data service.</p>
CSV File (Browse)	The method to find and select a CSV file that you have stored locally and will upload to your DMM appliance.
Download the CSV Template	A downloadable template file in Microsoft Excel format that you can use to define the EPG attributes for programs on one channel. This link is visible only when you have chosen Upload CSV from the EPG Provider list. See <a href="#">Using Channel Descriptions from a CSV File</a> .
Call Letters for Channel	A list of call letters for TV channels that your EPG subscription includes. The list is variable according to your location in the United States, the package of channels that you receive from your cable or satellite TV provider, the nature of your contract with TMS, and possibly other factors. Your list might include some or all of these call letters, possibly among others: <ul style="list-style-type: none"> <li>• ABC — American Broadcasting Company</li> <li>• AZA — Azteca América</li> <li>• CBC — Canadian Broadcasting Corporation</li> <li>• CBS — CBS Broadcasting</li> <li>• CW — The CW Television Network</li> <li>• FOX — Fox Broadcasting Company</li> <li>• MNT — MyNetworkTV</li> <li>• NBC — National Broadcasting Company</li> <li>• PAX — ION Television</li> <li>• PBS — Public Broadcasting Service</li> <li>• SRC — SRC</li> <li>• TEL — Telemundo</li> <li>• TLF — TeleFutura</li> <li>• TQS — Télévision Quatre Saisons</li> <li>• TVA — Tele Vida Abundante</li> </ul>

- UNI — Univision

This list is visible only after you choose Tribune Media Services from the EPG Provider list.

## Editing Channels

### Procedure

Step 1 Click the TV Channels tab.

Step 2 In the Channel Number column, identify the channel to be edited; then, click the arrow () in the Actions column for that row.

The Actions menu expands so that you can see and choose among its options.

Step 3 Click Edit Channel Setting.

The Edit an Existing Channel dialog box opens.

Step 4 Choose the options or enter the values that meet your requirements, as described in [Table 3-12](#).

Step 5 Do one of the following:

- To save your entries, click Update Channel.
- To discard your entries, click Cancel.

## Related Topics

- [UI Reference: Elements to Manage TV Channels](#)

## Reassigning Channel Numbers

### Procedure

Step 1 Click the TV Channels tab.

Step 2 In the Channel Number column, identify the channel to be edited.

Step 3 Click the up () or down () arrow to reassign this channel to the nearest unused number.

Alternatively, to specify a number for a channel, do the following:

- In the Channel Number column, identify the channel to be edited; then, click the arrow () in the Actions column for that row.

The Actions menu expands so that you can see and choose among its options.

- Click Reassign to Any Unused Channel.
- From the list in the Actions column, choose the channel number to assign to this channel.

## Related Topics

- [UI Reference: Elements to Manage TV Channels](#)
- ["Reassign to Nearest Unused Channel"](#) (in [Table 3-11](#))

## Deleting Channels

### Procedure

Step 1 Click the TV Channels tab.

Step 2 In the Channel Number column, identify the channel to be deleted; then, click the arrow () in the Actions column for that row.

The Actions menu expands so that you can see and choose among its options.

Step 3 Click Delete This Channel.

The Delete Confirmation dialog box opens.

Step 4 Do one of the following:

- To delete the channel, click Yes.
- To retain the channel, click No.

---

## Related Topics

- [UI Reference: Elements to Manage TV Channels](#)

## Listing Only the Defined (Active) or Undefined (Inactive) TV Channels

You can filter the TV Channels table so that it describes defined channels only or undefined channels only. By default, the table describes all channels.

### Procedure

Step 1 Click the TV Channels tab.

Step 2 From the Channel View list above the column headings, choose one of the following options:

- All Channels (default) — Shows the combination of all defined and undefined channels.
- Active Channels — Shows only the defined channels.
- Inactive Channels — Shows only the channels that are not yet defined.

---

## Related Topics

- [UI Reference: Elements to Manage TV Channels](#)

## Understanding Data Formats for EPG Provider Subscriptions

**Note** When you negotiate the contract to receive EPG data in any format, tell your subscription provider that you will use its EPG data with Cisco Enterprise TV. Knowing this, your provider can ensure that your license grants you sufficient permissions so that you are not in violation of its terms.

We support the XMLTV and TMS data formats for subscriptions to electronic program guide (EPG) data.

### XMLTV

- XMLTV is an emerging, open-source format for EPG data, based in part on RFC 2838, and maintained by the XMLTV Project. An EPG data file that complies with this format contains structured records that describe the attributes of episodes and channels individually.

Cisco DMS supports EPG data subscriptions that retrieve a single gzip-compressed XMLTV file from an ftp server. Many subscription providers compile and deliver EPG data in this way, including these providers based in the United States:

- FYI Television, Inc. (<http://www.fyitelevision.com/>)  
1901 N State Hwy 360 3rd Floor  
Grand Prairie, TX 75050
- Schedules Direct (<http://www.schedulesdirect.org/>)  
8613 42nd Ave S  
Seattle, WA 98118

### Tribune Media Services

Tribune Media Services (TMS; <http://tms.tribune.com/products/k-epgs.html>) sells subscriptions to EPG data in several proprietary data formats that it controls. Cisco DMS supports *only one* of these data formats. Specifically:

- The name of the supported product is *TV Schedules, United States*.
- The scope of the supported product is *Fourteen (14) rolling days*.
- Subscriptions that use this format are available only within the United States.

Other EPG subscription products from TMS use data formats that we do not support. If you are already a TMS customer, check whether your preexisting subscription contract already authorizes you to obtain and use EPG data in the supported format.

**Note** • To learn more about the supported TMS data format or to negotiate the commercial contract for a subscription, contact Amy Mann, the director of new media sales at Tribune Media Services. Her toll-free telephone number is 800 833-9581, ext. 2333, and her email address is aamann@tribune.com. To ensure that your contract includes sufficient permissions, be sure to say that you intend to use TMS data for Cisco Enterprise TV.

- It might be necessary to adjust security settings in your network so that you can receive EPG data from TMS. The ftp server on your DMM appliance must be able to reach the TMS ftp server.
- Data from TMS is proprietary, copyrighted, and licensed. Although TMS compiles this licensed data in good faith, neither Cisco nor TMS makes any express or implied warranties regarding the data or its merchantability or fitness for any particular purpose.

## Configuring Subscription Settings for EPG Providers

Electronic program guide (EPG) data *is not required* for Enterprise TV to work. You can enable or disable the EPG for Cisco DMS. You are not required to subscribe to any EPG data service.

**Tip** To have and use an EPG without entering into a subscription contract with TMS, you can create and upload a CSV file that contains program descriptions that you have entered.

- [Adding New Channels](#)
- [Using Channel Descriptions from a CSV File](#)
- [Adding or Editing Subscriptions to Data from an EPG Provider](#)
- [Deleting the Settings That Define an EPG Data Subscription](#)
- [Synchronizing TV Channel Schedules and Program Descriptions for the EPG](#)

### Adding or Editing Subscriptions to Data from an EPG Provider

You use elements on the EPG Providers page to define the settings for your EPG data subscriptions, view a summary of all subscriptions that you have defined and, optionally, choose whether to edit, delete, or synchronize a subscription.

For information about associating a subscription with a channel, see [Adding New Channels](#).

#### Procedure

**Step 1** Click the EPG Providers tab.

**Step 2** Do one of the following:

- To define the settings for a new subscription, click **Add an EPG Provider**.
- To edit a subscription that you defined previously:
  - a. In the EPG Provider Name column, identify the subscription to be edited; then, click the corresponding arrow  in the Actions column. The Actions menu expands so that you can see and choose among its options.
  - b. Click **Edit**.

A dialog box opens, in which you can define or edit the attributes for this subscription.

**Step 3** Choose the options or enter the values that meet your requirements, as described in [Table 3-13](#).

**Step 4** Do one of the following:

- To save your entries, do one of the following:
  - If you are defining a new subscription, click **Add Provider**.
  - If you are editing a subscription that you defined previously, click **Update Provider**.
- To discard your entries, click **Cancel**.

#### UI Reference: EPG Provider Settings

Table 3-13 Elements for Defining EPG Subscription Settings

Element	Description
Provider Name	The name that you use to distinguish this provider from all other providers.

Data Format	The file format for your subscription data, after you download and decompress it. One of these: <ul style="list-style-type: none"> <li>Tribune Media Services - TV Schedules</li> <li>XMLTV</li> </ul>
Host or IP Address	The routable IP address or DMS-resolvable hostname of the ftp server where you obtain EPG data from your subscription provider.
Username	Your username to log in to the specified ftp server.
Password	The password to authenticate your username to the specified ftp server.
Remote Path	The ftp server subdirectory path where EPG data files are stored for your subscription. Enter the full pathname, including the actual filename for the .gz (gzipped) archive, if the data format is XMLTV. For example, you might enter <i>pub/xmltv.xml.gz</i> .
Proxy Settings (Optional)	
Proxy Hostname	The routable IP address or DMS-resolvable hostname and port number of the proxy server that your DMM appliance should use if it does not have direct Internet access.
Proxy Port	<p>Note: Do not enter a colon before the port number.</p> <p>Note: Do not configure proxy settings for DMM appliances that have direct access to the Internet.</p>
Automatic Synchronization Time	
Hour	The exact time of day when your DMM appliance should synchronize its program guides for Enterprise TV with the latest available EPG data from your service provider.
Minute	

### Deleting the Settings That Define an EPG Data Subscription Procedure

Step 1 Click the EPG Providers tab.

Step 2 In the EPG Provider Name column, identify the subscription to be deleted; then, click the corresponding arrow  in the Actions column.

The Actions menu expands so that you can see and choose among its options.

Step 3 Click Delete.

Step 4 Click Yes to delete the subscription, when prompted to confirm your choices. Alternatively, click No to retain the subscription.

### Synchronizing TV Channel Schedules and Program Descriptions for the EPG Procedure

Step 1 Click the EPG Providers tab.

Step 2 In the EPG Provider Name column, identify the subscription whose TV channel schedules and program descriptions should be synchronized to your EPG; then, click the corresponding arrow  in the Actions column.

The Actions menu expands so that you can see and choose among its options.

Step 3 Click Synchronize.

The Performing EPG Synchronization dialog box opens. It shows a progress indicator () that spins until synchronization has finished. The dialog box then closes itself automatically.

Step 4 (Optional) To dismiss the dialog box and perform synchronization in the background so that you can continue your work, click Run in Background.

### Configuring Enterprise TV Settings for Video on Demand

Activation Video-on-demand (VoD) features for Enterprise TV depend upon the media library features for digital signage. Therefore, even though the DMM-ETV and DMM-DSM software modules are licensed separately and can operate independently of one another in most ways, you cannot use VoD features for Enterprise TV unless you have installed the licenses for both DMM-ETV and DMM-DSM.

### Adding a New VoD Category

#### Procedure

---

Step 1 Choose Video on Demand > Categories.

The Categories area is on the left, and after you click a category, a table on the right describes the videos that are mapped to that category.

Step 2 Click Actions > Create a Category.

Step 3 Enter a descriptive name for the category.

Step 4 Click Save.

Alternatively, click Cancel to discard your work.

---

#### Related Topics

### Navigation Path

Enterprise TV > Video on Demand > Categories

Table 3-14 Elements for Managing VoD Categories

Element	Description
Categories selector	A hierarchical tree (an object selector) of VoD categories. Highlight the name of a category to designate it as the one that should contain a VoD that you will map to it.
Actions	Options that you can choose, whose effect is relative to the category that you chose. <ul style="list-style-type: none"> <li>• Create a Category</li> <li>• Modify Category</li> <li>• Delete Category</li> </ul>
untitled table	Each row describes one VoD asset that is mapped to a category for Enterprise TV. Asset attributes that these columns describe are derived from records in your media library: <ul style="list-style-type: none"> <li>• Title</li> <li>• Description</li> <li>• Duration</li> <li>• Source</li> </ul>

Map Videos to Category	Opens a dialog box in which you can choose the videos to be mapped.
------------------------	---

### Mapping a Video to a VoD Category

Each video that you map to a category will be listed as a VoD in the interactive menu system at sites where you deploy Enterprise TV.

#### Before You Begin

- Add the video to your shared Media Library for digital signage and Enterprise TV.
- Create the category. See [Working With VoD Categories](#).

#### Procedure

- 
- Step 1** Click the **Video on Demand** tab.
- Step 2** In the **Categories** area, click the name of the category to which you will add a video.
- Step 3** In the area that lists videos, click **Map Videos to Category**.

The VoD Mapping dialog box opens. A tree on the left shows the hierarchy of categories for assets in your shared Media Library and, after you click a category, an untitled table on the right describes each asset in that category.

- Step 4** Click the Media Library category that contains the video that you want to use as a VoD.

The videos in this category are described in the untitled table on the right.

- Step 5** Click the name of the video, and then drag and drop it to the area below.

---

**Tip** To choose more than one video, press the Shift key while clicking the names of videos.

- Step 6** Do one of the following:

- To add the video, click **Submit Mapping**. The category that you chose is now part of the categories tree on the Video on Demand page. When you choose that category in the tree, the untitled table on the left side of the page describes each video that you added as a VoD.
  - To discard your entries, click **Cancel**.
- 

### Organizing Videos in VoD Categories

When you organize the videos in a VoD category, you set the order in which Enterprise TV shows the videos at your deployment sites.

#### Procedure

- 
- Step 1** Click the **Video on Demand** tab.
- Step 2** In the **Categories** area, click the name of the category that includes the videos to be organized.

The videos in this category are described in the untitled table on the right.

- Step 3** Click the name of the video; then, drag and drop it to its new location in the list. Videos that are higher in the list will be shown before videos that are lower in the list.
- 

### Removing a Video from a Category

When you remove a video from a category on the Video on Demand page, you remove it also from the interactive menu system at sites where you deploy Enterprise TV.

#### Procedure

- 
- Step 1** Click the **Video on Demand** tab.
- Step 2** In the area that lists videos, click **Map Videos to Category**.

The VoD Mapping dialog box opens.

- Step 3** Click the **Remove** link that corresponds to a video that should be removed.
-

## Using `Skins' to Customize the Enterprise TV Menu System

You can customize the interactive menu system that is presented to viewers at your deployment sites and choose which features this menu should include.

- [Choosing the Color Scheme for Your Menu System](#)
- [Specifying Which Features Your Menu System Should Include](#)
- [Showing a Custom Logo in Your Menu System](#)
- [Showing the Cisco Logo in Your Menu System](#)
- [Choosing the Date and Time Formats for Your Menu System](#)
- [Deploying Menu System Customizations to Your DMPs](#)

### Choosing the Color Scheme for Your Menu System

#### Procedure

---

Step 1 Click the Skin Customization tab.

Step 2 In the Choose a Skin area, click the radio button for the color scheme that you want.

Step 3 Click Save to save your work.  
Alternatively, click Cancel to discard it

---

Tip Menu customizations do not take effect until you deploy them to DMPs.

---

#### Related Topics

- [Deploying Menu System Customizations to Your DMPs](#)

### Specifying Which Features Your Menu System Should Include

#### Procedure

---

Step 1 Click the Skin Customization tab.

Step 2 In the Features to Include in the Enterprise TV Main Menu area, check the check box for each feature that the menu system should include:

- Electronic Programming Guide
- Video on Demand
- Live TV Channels

Step 3 Click Save to save your work.  
Alternatively, click Cancel to discard it

---

Tip Menu customizations do not take effect until you deploy them to DMPs.

---

#### Related Topics

- [Deploying Menu System Customizations to Your DMPs](#)

### Showing a Custom Logo in Your Menu System

#### Procedure

---

Step 1 Click the Skin Customization tab.

Step 2 In the Upload a Custom Logo area, click Browse.

Step 3 Choose the file to be uploaded, and then click Open.

Step 4 Click Preview to view the logo file.

Step 5 Check the Display Custom Logo check box.

The logo appears in the upper right of the menu system.

Step 6 Click Save to save your work.

Alternatively, click Cancel to discard it

---

Tip Menu customizations do not take effect until you deploy them to DMPs.

---

#### Related Topics

- [Deploying Menu System Customizations to Your DMPs](#)

### Showing the Cisco Logo in Your Menu System

#### Procedure

---

Step 1 Click the Skin Customization tab.

Step 2 Check the Display Cisco Logo check box.

The logo appears in the lower left of the menu system.

Step 3 Click Save to save your work.

Alternatively, click Cancel to discard it

---

Tip Menu customizations do not take effect until you deploy them to DMPs.

---

#### Related Topics

- [Deploying Menu System Customizations to Your DMPs](#)

### Choosing the Date and Time Formats for Your Menu System

#### Procedure

---

Step 1 Click the Skin Customization tab.

Step 2 Choose either mm/dd/yyyy or yyyy/mm/dd from the Date Format list, where:

- mm is the month
- dd is the date in the month
- yyyy is the year

Step 3 Check the Use Military Time check box if your menu system should use a 24-hour clock that counts from 00:00 to 23:59 the hours that pass from one midnight to the next.

Alternatively, uncheck this check box if your menu system should use a 12-hour clock that counts from 12:00 to 11:59 the hours that pass from midnight to noon (designated as *a.m.*), and again from noon to midnight (designated as *p.m.*).

Step 4 Click Save to save your work.

Alternatively, click Cancel to discard it

---

Tip Menu customizations do not take effect until you deploy them to DMPs.

---

## Using DMP Local Storage for Enterprise TV VoD Playback

If your WAN has limited bandwidth that would reduce the playback quality for VoD programs that Enterprise TV receives over your network or if you do not have a dedicated content delivery solution in place, such as WAAS or ACNS, you can provision Enterprise TV assets directly to a DMP, for storage on:

- Its internal SD flash memory card (usb\_1).
- An external USB drive (usb\_2), which you have attached to the DMP.

This technique conserves WAN bandwidth and avoids latency that might detract from the quality of your Enterprise TV VoD programming.

## Procedure

	Workflow	Actions
Step 1	Create the DMP group whose member DMPs should all store local copies of your VoD assets.	See <a href="#">Managing and Grouping Your DMPs</a> .
Step 2	Define your channel lineup for Enterprise TV.	See <a href="#">Adding New Channels</a> .
Step 3	Customize your Enterprise TV menu system.	See <a href="#">Using 'Skins' to Customize the Enterprise TV Menu System</a> .
Step 4	Define VoD categories for Enterprise TV.	See <a href="#">Working With VoD Categories</a> .
Step 5	Add video assets to your shared media library.	See: <ul style="list-style-type: none"> <li>• <a href="#">Adding One Asset at a Time to Your Media Library</a>.</li> <li>• <a href="#">Adding Multiple Assets Simultaneously to Your Media Library</a>.</li> </ul>
Step 6	Populate your VoD categories with video assets from your media library.	See <a href="#">Mapping a Video to a VoD Category</a> .
Step 7	Verify that the FTP service is enabled on the target DMPs.	See <a href="#">System Tasks</a> .
Step 8	Create a deployment package for the Enterprise TV program guide.	<ol style="list-style-type: none"> <li>Choose Digital Media Players &gt; Advanced Tasks.</li> <li>Choose Deployment Package from the Application Types list.</li> <li>Click  Add New Application.</li> <li>Choose Enterprise TV from the Applications list.</li> <li>Enter Deploy-Local-ETV in the Name field.</li> <li>Choose an option from the Mount Point list: <ul style="list-style-type: none"> <li>• Choose Flash Storage (default) if "usb_1" — an SD memory card that is installed inside your DMP — should be the mount point.</li> <li>• Choose USB if "usb_2" — an external hard drive or flash drive that you have attached to your DMP — should be the local mount point.</li> </ul> </li> <li>Click the name of your Enterprise TV program guide, and then click Select Application.</li> <li>Click Submit.</li> </ol>

Step 9	Provision your Enterprise TV program guide to DMPs that should serve on-demand video from their local storage.	<p>If the Program Guide Should be Provisioned Now</p> <ol style="list-style-type: none"> <li>Choose Schedules &gt; Play Now.</li> <li>Choose the DMP or the DMP group that should receive this deployment.</li> <li>Choose Advanced Tasks from the Select an Event Type list, and then click Select Advanced Tasks.</li> <li>In the Select Event dialog box: <ol style="list-style-type: none"> <li>Click Deployment Package.</li> <li>Click Deploy-Local-ETV, or whichever other name you used in <a href="#">e</a>.</li> <li>Click OK.</li> </ol> </li> <li>Click Submit, and then go to .</li> </ol> <p>If the Program Guide Should be Provisioned in the Future</p> <ol style="list-style-type: none"> <li>Choose Schedules &gt; Play in Future.</li> <li>From the calendar, choose the year, month, and day when the deployment should start.</li> <li>Choose Advanced Tasks from the Add an Event list under the timeline.</li> <li>In the Schedule Task dialog box (and the dialog boxes that it spawns): <ol style="list-style-type: none"> <li>Click Select Group, click the group name, and then click OK.</li> <li>Click Select Advanced Tasks, click Deployment Package, and then click OK.</li> <li>Edit date and time values and the settings for recurrence.</li> <li>Verify that the deployment start and stop times occur the logical order, and differ.</li> <li>Click Save.</li> </ol> </li> <li>Click Save All.</li> </ol> <p>Note You must click Save All. If you do not click it, the schedule discards your selections immediately after you refresh your browser or load any other page.</p> <ol style="list-style-type: none"> <li>Click Publish All, and then go to</li> </ol>
Step 10	Transfer your customized menu system, channels list, VoD playlist, and video assets to DMPs.	<p>Choose whether to use DMS-CD or the legacy "File Transfer to DMP or Server" feature.</p> <ul style="list-style-type: none"> <li>If you will use DMS-CD, see <a href="#">Using DMS-CD Deployment Packages to Provision Assets to DMPs</a>.</li> <li>If you will use the legacy method, see <a href="#">File Transfer to DMP or Server</a>.</li> </ul> <p>Note We recommend that you use DMS-CD instead of the legacy method, which is deprecated. When you use the "File Transfer to DMP or Server" feature to provision assets to DMP local storage, these assets are saved to the flash memory card (usb_1) that is preinstalled inside the DMP. You cannot use this feature to transfer assets to any external USB drive (usb_2) that you might have attached to the DMP. Furthermore, this feature lacks the differential download intelligence that is built into DMS-CD.</p>
Step 11	Monitor progress and the current status of your deployment.	<ol style="list-style-type: none"> <li>Choose Digital Media Players &gt; Deployment Manager &gt; Deployment Status.</li> <li>(Optional) Use filtering options above the table to limit how many deployment packages the table describes.</li> </ol>

#### Emulating the DMP Remote Control for Enterprise TV

Topics in this section describe a software-based emulator that you can use in place of, or in addition to, the remote control unit for a DMP.

**Note** • Although Cisco sells a physical remote control device for use with DMPs that deliver Enterprise TV programming to their attached displays, the remote control unit is an optional accessory for a DMP. To obtain one of these remote control units as a spare part, order Cisco part number 74-5639-01.

- To learn about the remote control unit, see *Remote Control Quick Start Guide for Cisco Digital Media Players* and *Regulatory Compliance and Safety Information for the Cisco Digital Media Player Remote Control* on Cisco.com.
- The emulated remote control supports changing channels for Enterprise TV, navigating in the Enterprise TV menu system, and adjusting audio volume settings for a DMP.

- [Workflow in Cisco Unified Communications Manager to Provision the Emulator for IP Phones](#)
- [Configuring Emulator Settings in DMM-ETV](#)
- [Configuring an IP Phone to Emulate the Remote Control](#)
- [Starting the Emulator on an IP Phone](#)
- [Starting the Emulator on a Mobile Phone](#)
- [Using the Emulator on an IP Phone or a Mobile Phone](#)

## Workflow in Cisco Unified Communications Manager to Provision the Emulator for IP Phones

You can provision the Enterprise TV remote control emulator for use on Cisco IP phones.

### Before You Begin

This workflow assumes that you are experienced as an administrator in Cisco Unified Communications Manager and that you use it already to manage a network of IP phones.

**Tip** Skip this workflow if you will not use any IP phones to emulate the remote control for Enterprise TV.

**Note** This workflow is based on Cisco Unified Communications Manager release 6.1. If you use any other release, the workflow might differ slightly in your network. We recommend that you read on Cisco.com the particular revisions of these guides that apply to your network:

- *Cisco Unified Communications Manager Administration Guide*
- *Cisco Unified Serviceability Administration Guide*

### Procedure

	Workflow	Actions
Step 1	Activate all services.	<ol style="list-style-type: none"> <li>Log in to Cisco Unified Communications Manager Administration.</li> <li>Choose <b>Cisco Unified Serviceability</b> from the Navigation list, and then click <b>Go</b>.</li> <li>Choose <b>Tools &gt; Service Activation</b>.</li> <li>Click the <b>Server list</b> and choose from among its options the server where the remote control emulation service should be activated for Enterprise TV.</li> <li>Click <b>Go</b>.</li> <li>Check the <b>Check All Services</b> check box, and then click <b>Save</b>.</li> <li>Click <b>OK</b>.</li> </ol>
Step 2	Start all services.	<ol style="list-style-type: none"> <li>Choose <b>Tools &gt; Control Center - Feature Services</b>.</li> <li>Click the <b>Server list</b> and choose from among its options the server where the remote control emulation service should be started for Enterprise TV.</li> <li>Click <b>Go</b>.</li> <li><i>Repeat as many times as necessary until every service is running.</i> Click the radio button for any service that is not yet running, and then click <b>Start</b>.</li> </ol>

Step 3	Configure enterprise parameters for the phone URL.	<ol style="list-style-type: none"> <li>a. Choose Cisco Unified CM Administration from the Navigation list, and then click Go.</li> <li>b. Choose System &gt; Enterprise Parameters., and then scroll to the Phone URL Parameters area.</li> <li>c. Verify that you have not changed the factory-default values for any of these parameters: <ul style="list-style-type: none"> <li>• URL Authentication</li> <li>• URL Directories</li> <li>• URL Information</li> <li>• URL Services</li> </ul> </li> <li>d. Click Save.</li> </ol>
Step 4	Enable autoregistration of IP phones.	<ol style="list-style-type: none"> <li>a. Choose System &gt; Cisco Unified CM, and then click Find.</li> <li>b. Click the name of the server whose managed IP phones should be autoregistered.</li> <li>c. Uncheck the Auto-registration disabled on this Cisco Unified Communications Manager check box.</li> <li>d. Edit the range of values that starts in the Starting Directory Number field and ends in the Ending Directory Number field.</li> <li>e. Click Save.</li> </ol>
Step 5	Define attributes of the emulator phone service.	<ol style="list-style-type: none"> <li>a. Choose Cisco Unified CM Administration from the Navigation list, and then click Go.</li> <li>b. Choose Device &gt; Device Settings &gt; Phone Services.</li> <li>c. Click Add New.</li> <li>d. Enter Enterprise TV in both of these fields: <ul style="list-style-type: none"> <li>• Service Name</li> <li>• ASCII Service Name</li> </ul> </li> <li>e. Enter this URL in the Service URL field:  <a href="http://&lt;DMM_hostname&gt;:8080/etv-remotecontrol-webapp/app/getpin">http://&lt;DMM_hostname&gt;:8080/etv-remotecontrol-webapp/app/getpin</a> </li> <li>f. Click Save.</li> </ol>
Step 6	Make the emulator service available to each IP phone that should subscribe to it.	<ol style="list-style-type: none"> <li>a. Choose Cisco Unified CM Administration from the Navigation list, and then click Go.</li> <li>b. Choose Device &gt; Phone.</li> <li>c. Click Find.</li> <li>d. Repeat this sequence of actions for each phone that should subscribe to the emulator: <ol style="list-style-type: none"> <li>1. Click the name, in the Device Name (Line) column, of the managed IP phone that you will configure. By default, this name is just SEP prefixed to the MAC address of the phone.  Your server might be configured to use some other naming format.</li> <li>2. When the page refreshes, choose Subscribe/Unsubscribe Services from the Related Links list.</li> </ol> A popup window opens. <ol style="list-style-type: none"> <li>3. Choose Enterprise TV from the Select a Service List, and then click Next.</li> <li>4. Choose Enterprise TV from the ASCII Service Name list, and then click Subscribe.</li> <li>5. Verify that the message in the Status area says, "Add successful," and that the Subscribed Services area includes "Enterprise TV."</li> <li>6. Close the popup window.</li> </ol> </li> </ol>

7. Click Go.

**Note** Emulator-related configuration changes that you make on your Cisco Unified Communications Manager server do not become useful until after you also configure DMM-ETV to serve the emulator, and configure at least one IP phone to run the emulator.

#### Related Topics

- [Using the Emulator on an IP Phone or a Mobile Phone](#)

#### Configuring Emulator Settings in DMM-ETV

##### Procedure

**Step 1** Choose Enterprise TV > Remote Control.

**Tip** The first time that you use this feature, you might notice that options are dimmed and not available to you. Click **Save** to activate all options so that you can choose options.

**Step 2** Choose an option from the Display Security PIN on screen list, to set how many of your DMPs should support the emulator:

- All DMPs
- Selected DMPs
- None

**Tip** If you choose None in [Step 2](#), the Display DMP Selections button is dimmed and not available to you. To see and use this button, you must choose either All DMPs or Selected DMPs.

**Step 3** If you chose Selected DMPs in [Step 2](#), click **Display DMP Selections** to open a dialog box where you can refine your list of which DMPs should support the emulator. In this dialog box:

- Use the check boxes to select and deselect DMPs.
- Click **Save Selection Changes** to save your work, and then click **Close** to dismiss the dialog box. Alternatively, click **Close** to discard your work and close the dialog box.

**Step 4** Choose an option from the Security PIN behavior list. Although Enterprise TV randomly generates all of its emulator PINs, the fixed and dynamic types differ in their persistence:

- Fixed — These PINs persist until the PIN management type is changed.
- Dynamic — These PINs expire and then are regenerated after an update interval that you define.

No two DMPs in your network will use the same PIN at any one time.

**Step 5** If you chose the dynamic PIN type in [Step 4](#), enter at least one digit in the Security PIN update interval (minutes) field. The interval cannot be any less than 2 min. If you do not enter any value, DMM-ETV uses its factory-default interval of 5 min.

**Step 6** Enter a shortened URL in the Access URL field for a page that will redirect ultimately to `http://<DMM_hostname>:8080/etv-remotecontrol-webapp/app/index.htm`.

**Note** The shortened URL must not be more than 24 characters long.

**Step 7** Click **Save**.  
Alternatively, to discard your selections and start over again, click **Cancel**.

**Step 8** Deploy the new emulator settings to your DMPs:

- Choose **Digital Media Players > DMP Manager**.

- b. Choose the DMP or DMP group that should use these settings.
- c. Choose ETV-PG from the Actions list, and then click Go.

#### Configuring an IP Phone to Emulate the Remote Control

You can configure a Cisco IP Phone from the 7960 series or the 7970 series to emulate the remote control for Enterprise TV, and then use keys drawn on its touchscreen to choose options from the electronic program guide, change channels, and adjust audio volume levels.

##### Before You Begin

Complete the workflow in Cisco Unified Communications Manager to provision the emulator to your IP phones.

##### Procedure

---

Step 1 Press **Settings** on your Cisco IP phone.

Step 2 Press \* \* #.

A confirmation message at the bottom of the touchscreen says, "Settings Unlocked!"

Step 3 Go to **Network Configuration**, and then press **Select**.

Step 4 Go to **Alternate TFTP**, and then press **Yes**.

---

**Tip** If Alternate TFTP is not an option in the Network Configuration menu, contact the administrator for Cisco Unified Communications Manager.

---

Step 5 Click **Save**.

The IP phone is restarted automatically, so that its configuration changes can take effect.

---

#### Starting the Emulator on an IP Phone

##### Before You Begin

- Provision the emulator for use on Cisco IP phones.
- Configure emulator settings in DMM-ETV.
- Configure your IP phone to emulate the remote control.
- Make note of the generated PIN code in the top-right corner of a DMP display that is showing Enterprise TV. The emulator cannot control the corresponding DMP without this PIN.

##### Procedure

---

Step 1 Press **Services** on your Cisco IP phone.

Step 2 Highlight the remote control option in the services list, and then press **Select**.

Step 3 Tap the PIN field on your touchscreen.

Step 4 Use the keypad to enter the PIN code.

Step 5 Tap **Submit** on the touchscreen.

The touchscreen is refreshed and the emulator starts.

---

## Starting the Emulator on a Mobile Phone

### Before You Begin

- Configure emulator settings in DMM-ETV.
- Make note of the generated PIN code in the top-right corner of a DMP display that is showing Enterprise TV. The emulator cannot control the corresponding DMP without this PIN.
- This procedure assumes that you are using a supported platform. To learn which mobile phone platforms we support in this release, see *Release Notes for Cisco Digital Media System 5.x* on Cisco.com. An unsupported platform might not be capable of running the emulator.

### Procedure

- 
- Step 1 Start the Internet browser on your mobile phone.
  - Step 2 Go to the URL that you see on the DMP display that is showing Enterprise TV.

You are prompted to enter the PIN.

- Step 3 Enter the PIN, and then click Go.

The emulator starts.

---

## Related Topics

## Working with Assets and Categories in Your Media Library

Activation Software feature modules for Cisco DMS are purchased and licensed separately. Features are hidden from all users until you purchase and install the required license to use them, and even then remain hidden from users whose privilege levels are low. To understand feature licenses and learn how to install them, see [Managing Licenses for Features and Components of Cisco DMS, page 2-3](#). To learn how user access to features is restricted by the combination of licenses and user privilege levels, see [Understanding User Roles in DMS-Admin, page 2-9](#). To learn which software feature modules are available for you to purchase, see <http://www.cisco.com/go/dms>.

To simplify management, you can organize your assets for digital signage and Enterprise TV. We recommend that you create categories for sets of characteristics that your assets have in common — such as their file type,

intended audience, or genre.

**Note** This release does not support audio in Shockwave Flash media. If your media library contains any Shockwave Flash files that use audio, their playback will be silent on your DMP displays.

### Before You Begin

To see and use the Media Library, you must be:

- Using a DMM appliance on which a valid license is installed for DMM-DSM.
- Logged in as a user with at least read-only permissions for at least one category.

### Procedure

**Step 1** Click the Media Library tab.

A tree on the left side of the Media Library page names the types of media that are supported and shows the hierarchy of categories that you have created to organize assets without regard for their media type.

**Step 2** Click the name of a media type or of a category.

An untitled table on the right side of the page is updated automatically to describe assets of the relevant type that your library contains.

**Step 3** (Optional) Use filtering controls above the table, so that it describes only a narrow subset of your assets, based on criteria such as the title, file type, or duration.

**Step 4** Enter the values and choose the options that meet your requirements.

#### Navigation Path

Digital Signage > Media Library

Table 3-15 Elements for Managing a Media Library

Element	Icon and Description
Media Types	<p>A complete list of the types of assets that are supported. The supported assets are:</p> <ul style="list-style-type: none"> <li>• DMP Firmware (  )</li> <li>• HTML (  )</li> <li>• Images (  )</li> <li>• Shockwave Flash (  )</li> <li>• UDP (  )</li> <li>• Video (  )</li> </ul> <p>When you click the name of a media type, an untitled table on the right side of the page is updated automatically to describe assets of the relevant type that your library contains.</p>

Categories	<p>A hierarchical list (an object selector) of all categories in your media library. A category can contain assets or it might be empty. You can create new categories, edit existing categories, delete categories, or click a category whose assets the untitled table should describe. You can add almost any number of nested categories to your media library.</p> <p>Options — A menu from which you can choose among these options:</p> <ul style="list-style-type: none"> <li>• Create Category — Opens the Add Category dialog box.</li> <li>• Rename Category — Opens the Edit Category dialog box.</li> <li>• Delete Category — Deletes the category that you highlighted.</li> </ul> <p>Create Category — Opens the Add Category dialog box.</p>
Filter by	
<p><i>Methods by which you can cause the untitled table to describe only the assets from your media library that match parameters you have specified. Choose the filtering method, specify the parameters, and then click Go. You can use only one filter per query. You cannot apply a second filter to results that are already filtered.</i></p>	
Title	Enter at least one word that the title contains.
Filename	Enter a string of characters that the filename contains.
Description	Enter at least one word that the description contains.
File Type	Enter the file type to be matched.
Estimated Duration	Enter in hours, minutes, and seconds, the duration to be matched.
Date Modified	 <p>Click the first calendar icon (  ) to choose the start date for the range of modification dates to be matched, and then click the second calendar icon to choose the end date for the range.</p>
Owner	Enter the DMM username for the asset owner to be matched.
Source	Choose whether the asset is stored locally (File) or remotely (URL).
Path	Enter a string of characters that the path contains.
untitled table	
<p><i>Describes all assets contained in the category, or of the media type, that you clicked in the object selector. The table sorts information into columns.</i></p>	
Asset Title	A unique and human-readable title that you entered.
Filename	The filename for this asset.
File Type	Identifies the format of the asset that the corresponding row describes.
Size	The file size in bytes.
Estimated Duration	The duration value that you entered when you added this asset to your media library, or when you edited attributes of this asset.
Date Last Modified	Time stamp (in the format DD-MM-YYYY hh:mm:ss) that says when the file was last modified.
pagination controls	
<p>Buttons and fields clustered under a table, by which you:</p> <ul style="list-style-type: none"> <li>• Set how many rows a table should show per page before it starts to span multiple pages.</li> <li>• Move from one page to another in a table that spans multiple pages.</li> <li>• Cause the table to show refreshed data.</li> </ul>	
Options	

Choose the option, if any, that meets your requirements	
Add Media Asset	Opens the Add Asset dialog box.
View Media Asset	Opens the View Asset dialog box.
Edit Media Asset	Opens the Edit Asset dialog box.
Remove Media Asset	Deletes the asset that you highlighted.
Add Media Asset	Opens the Add Asset dialog box.
Create Playlist	Opens the New Playlist dialog box in a popup window.

#### UI Reference: Elements to Add Categories and Rename Them

The Add Category and Rename Category dialog boxes help you to manage the categories for organizing assets in your media library.

#### Navigation Path

- Digital Signage > Media Library > Create Category
- Digital Signage > Media Library > Options > Create Category
- Digital Signage > Media Library > Options > Rename Category

Table 3-16 Elements for Managing Media Library Categories

Element	Description
Name	A unique and human-readable name for a category.
Description	A brief description of the category and its purpose.

#### About the Maximum File Size for Assets in Your Media Library

- Before you add any asset, confirm that its file size is not more than 1.9 GB, which is the maximum stream size for any asset that you include in the layout for a DMD presentation.
- For purposes of stage-one failover, the combined size of all assets cannot exceed the capacity of the SD card in a DMP. To understand failover, see the "Understanding Content Substitution (Failover)" topic in *User Guide for Cisco Digital Media Player Device Manager 5.1* on Cisco.com.

#### Adding One Asset at a Time to Your Media Library

- 
- Note • After you start to import an asset, do not click any browser button or navigate away from this page until the import is finished. If you do, the import will not finish successfully.
- We recommend that you do not use your DMM appliance as if it is a storage server. It has limited capacity to store files and DMM might not function as designed if space runs low.
- 

#### Procedure

**Step 1** Click the **Single** tab.

**Step 2** Do one of the following in the **Source** area to specify the full local pathname or remote HTTP URL of the asset:

- Click **URL**, enter the URL, and then check or uncheck the **Download URL** check box to control whether you download a local copy of the asset or use the version of it that is stored remotely. The URL must be encoded properly (using "%20" instead of spaces, for example), according to the principles set forth in RFC 2396.
- Click **Local File**, and then click **Browse** or enter the full local pathname.

**Step 3** Choose the option in the **File Type** area that best describes the asset.

**Step 4** Enter a title for the asset.

**Step 5** Enter the estimated duration for playback.

**Step 6** Choose at least one category.

Step 7 (Optional) Enter a description.

Step 8 (Optional) Enter an owner for the asset.

Step 9 Click Save.

Alternatively, to discard your selections, click Cancel.

### Adding Multiple Assets Simultaneously to Your Media Library

The amount of time that a batch download operation requires depends on the speed of your connection, the number of directory levels that you search for downloadable files, and the total combined file size of all files that you transfer.

- Note • After you start to import an asset, do not click any browser button or navigate away from this page until the import is finished. If you do, the import will not finish successfully.
- We recommend that you do not use your DMM appliance as if it is a storage server. It has limited capacity to store files and DMM might not function as designed if space runs low.

### Procedure

Step 1 Click the Batch tab.

Step 2 Enter, in the Base URL area, the root-level URL for the batch download operation.

We do not support any use of spaces in URLs.

Step 3 Enter, in the Pattern area, a filename pattern that identifies which files to download.

For example, to download every file that uses the three-letter MPG filename extension, the pattern is \*.MPG.

Note Do not enter the filename pattern to use any unsupported file type.

Step 4 Make choices and enter values to add assets to your library, and then click Save.  
Alternatively, to discard your selections, click Cancel.

### UI Reference: Elements to Add Assets and Edit Their Attributes

Features of the Add Media Asset and Edit Media Asset dialog boxes help you to populate and manage your media library. Options are sorted under two tabs, *Single* and *Batch*, which help you to manage either one asset or multiple assets, respectively.

#### Navigation Path

- Digital Signage > Media Library > Add Media Asset
- Digital Signage > Media Library > Options > Add Media Asset
- Digital Signage > Media Library > Options > Edit Media Asset

Table 3-17 Elements for Adding and Editing Assets

Element	Description
Single tab	
<i>Elements to add or edit one asset.</i>	
Source	The full local pathname or remote HTTP URL of the asset. We do not support any use of spaces in filenames or URLs.

File Type	Choose the type that best describes the asset: <ul style="list-style-type: none"> <li>• <b>Video</b> — A video file in MPEG-1, MPEG-2, or MPEG-4 format. Our support for MPEG-4 requires that you use the MPEG-4 Part 2 or Part 10 (H.264) codec and that you multiplex audio and video in an MPEG-2 Transport Stream. If your DMP is a 4400G, we support MPEG-4 Part 10/H.264 video in MPEG-2 TS. (Neither the 4300G nor the 4305G supports MPEG-4 Part 10/H.264.) The filename extension must be MPG or MPEG and you must enter the estimated duration.</li> <li>• <b>Shockwave Flash</b> — An Adobe Shockwave Flash 6, or 7 file if your DMP is a 4300G or a 4305G. Alternatively, if your DMP is a 4400G, and then a file in the format of Shockwave Flash 6, 7, 8, 9, or 10. The filename extension must be SWF and you must enter the estimated duration. This release does not support audio in Shockwave Flash media. If your media library contains any Shockwave Flash files that use audio, their playback will be silent on your DMP displays.</li> <li>• <b>Images</b> — A standard image file, such as a nonprogressive JPEG image. The filename extension must be JPG, JPEG, GIF, or PNG.</li> <li>• <b>HTML</b> — A web page. The filename extension must be HTM or HTML.</li> <li>• <b>Firmware</b> — A firmware or kernel image for the DMP. The filename extension must be FWIMG or BIN for firmware, or TIVELLA for kernels.</li> <li>• <b>UDP</b> — The routable IP address and UDP port for a streaming server.</li> </ul>
Title	A unique and human-readable name for the asset.
Estimated Duration	The estimated duration for playback, counted in hours, minutes, and seconds.
Category	Describes each of the categories that should contain this asset. To add a category to the list, click <b>Select Category</b> .
Description	Optional, brief description of the asset.
Owner	Your name or the name of the person who added the asset.
<b>Batch tab</b>	
<i>Elements to add or edit multiple assets simultaneously.</i>	
Base URL	An HTTP URL that points to a directory on a server. The directory that you point to serves as the root-level URL for the batch download operation; every file that you download is retrieved from this directory or from one of its children at a lower level. We do not support any use of spaces in URLs.
Pattern	The filename pattern that identifies which files to download. We do not support any use of spaces in filenames.
File Type	Choose the type that best describes these assets: <ul style="list-style-type: none"> <li>• <b>Video<sup>1</sup></b> — A video file in MPEG-1, MPEG-2, or MPEG-4 format.</li> <li>• <b>Shockwave Flash<sup>2</sup></b> — Any Adobe Shockwave Flash 6, or 7 file if your DMP is a 4300G or a 4305G. Alternatively, if your DMP is a 4400G, any Adobe Shockwave Flash 6, 7, 8, 9, or 10 file.</li> <li>• <b>Images</b> — Any standard image file, such as a nonprogressive JPEG image. The filename extension must be JPG, JPEG, GIF, or PNG.</li> <li>• <b>HTML</b> — Any web page. The filename extension must be HTM or HTML.</li> <li>• <b>Firmware</b> — Any firmware image for the DMP. The filename extension must be FWIMG or BIN for firmware, or TIVELLA for kernels.</li> <li>• <b>UDP</b> — The routable IP address and UDP port for a streaming server.</li> </ul>
Levels	The number of levels below the specified base URL to search for (and download) files with filenames that match the specified pattern.
Category	Click the name of the one category that should contain these assets.

<sup>1</sup> Our support for MPEG-4 requires that you use the MPEG-4 Part 2 or Part 10 (H.264) codec and that you multiplex audio and video in an MPEG-2 Transport Stream. If your DMP is a 4400G, we support MPEG-4 Part 10/H.264 video in MPEG-2 TS. Neither the 4300G nor the 4305G supports MPEG-4 Part 10/H.264. The filename extension must be MPG or MPEG and you must enter the estimated duration.

<sup>2</sup> The filename extension must be SWF and you must enter the estimated duration. This release does not support audio in Shockwave Flash media. If your media library contains any Shockwave Flash files that use audio, their playback will be silent on your DMP displays.

## UI Reference: Elements that Describe and Preview One Asset

The View Asset dialog box describes the attributes of one asset in your Media Library and, in some cases, shows a preview. Attribute information is sorted under two tabs, *Overview* and *Usage*. Click a tab to see the asset attributes that it describes. To close the View Asset dialog box, click **Close**.

## Navigation Path

Digital Signage > Media Library > Options > View Media Asset

Table 3-18 Elements for Viewing Asset Attributes

Element	Description
Overview tab	
<i>Attributes that are derived from information in your media library include the elements with these field labels: Title, Description, File Type, Estimated Duration, Owner, Category Names, and Source. To understand these elements, see <a href="#">UI Reference: Elements to Add Assets and Edit Their Attributes</a>. Other elements on the Overview tab are as follows.</i>	
Preview	Either a generic icon that represents the asset type or a thumbnail that you can click to view this asset, assuming that its file type is viewable in your browser.
Path	The full HTTP pathname for this asset.
Size	The file size.
Playlist Count	The total count of playlists that contain and are dependent upon this asset. To learn more about these playlists, click the Usage tab.
Presentation Count	The total count of presentations that contain and are dependent upon this asset. To learn more about these presentations, click the Usage tab.
Date Modified	Time stamp (in the format DD-MM-YYYY hh:mm:ss) that says when the file was last modified.
Usage tab	
<i>Shows either the Playlists for Asset table or the Presentations for Asset table, depending on whether you click Playlist or Presentation, respectively. The table sorts information into the following columns.</i>	
Name	The name of the presentation or the playlist that is dependent upon this asset.
Time Referenced	The total count of instances when the described presentation or playlist includes this asset.
Date Modified	Time stamp (in the format DD-MM-YYYY hh:mm:ss) that says when the described presentation or playlist was last modified.

## Understanding the Two Types of Playlists for Digital Signage

DMM-DSM provides two ways to populate playlists for use in your digital signage network.

The first type is simply called a *playlist*. You create this type outside Digital Media Designer (DMD) and you can schedule it to play either as a standalone event or within a presentation that you design in DMD.

The second type is called a *presentation playlist*. You create this type inside DMD and include it within a presentation that you design in DMD. You cannot schedule this type to play as a standalone event.

## Working with Presentations, Templates, and Presentation Playlists for Digital Signage

Digital Media Designer (DMD) is a powerful, drag-and-drop design tool that helps you to create customized presentations for digital signage. Cisco provides predesigned assets that you can use as a jumping-off point for your designs or you can create designs that are entirely your own. DMD supports horizontal and vertical screen orientations. With DMD, you:

- Subdivide the screen space on a DMP display into rectangular areas called *screen zones*.
- Choose the media objects, called *assets*, to play back in those screen zones — including media from digital video files, JPEG files, SWF files, RSS feeds, ordinary web pages, and other popular media types.
- Add assets to, and configure the timeline for, any screen zone that represents a *presentation playlist*.

Although you use your browser to start DMD, it runs outside your browser, in Java Web Start. You can open and work with only one template or one presentation at a time. Presentations for digital signage most commonly divide screen space into two, three, or four screen zones, but you can create more zones for a presentation in DMD if you need more.

After you create, edit, and save a presentation, you can deploy it to your DMPs from the scheduler. Each affected DMP then restarts automatically before it starts to show the presentation. To learn how to deploy a presentation to your DMPs, see [Scheduling Time Slots for Media and Events on DMPs](#).

This section contains these topics:

- [Before You Start to Use Digital Media Designer](#)
- [Getting Started with DMD](#)
- [DMD User Interface Reference](#)
- [Creating and Organizing Presentation Playlists](#)

- [Creating and Organizing Ordinary Playlists](#)

## Before You Start to Use Digital Media Designer

Use the following checklist to track your compliance with the requirements and recommended best practices for using DMD successfully.

<input checked="" type="checkbox"/>	<b>Requirements and Recommendations</b>
Prerequisites	
<input type="checkbox"/>	<p>1. Ensure that Java Runtime Engine (JRE) 1.6.0 or later is installed on your PC. Also confirm that it is configured to use English as its language, and that it is working correctly. The JRE 1.6.0 release is part of Java Version 6.</p> <ul style="list-style-type: none"> <li>• To learn exactly which JRE release you are using and to confirm that it is working correctly, go to <a href="http://java.com/en/download/help/testvm.xml">http://java.com/en/download/help/testvm.xml</a>.</li> <li>• To understand the Java release naming conventions, which have changed over time, see <a href="http://java.sun.com/javase/namechange.html">http://java.sun.com/javase/namechange.html</a>.</li> <li>• To obtain the required JRE, go to <a href="http://javasoft.com">http://javasoft.com</a>, click Java SE, and then download the latest JRE version.</li> <li>• Apple maintains and distributes its own implementations of Java software for Mac OS users. To learn if Apple has made available any JRE that is based on JRE 1.6.0, see <a href="http://www.apple.com/java">http://www.apple.com/java</a>. Alternatively, registered Apple Developer Connection (<a href="http://connect.apple.com/">http://connect.apple.com/</a>) members might find that Apple has released a preview version of a compatible JRE. We make no claims about the suitability of such software for any purpose and recommend that you test all software thoroughly before you rely on it.</li> </ul>
<input type="checkbox"/>	<p>2. If you use Windows, choose Start &gt; Settings &gt; Control Panel &gt; Internet Options, and then click the Advanced tab. Scroll to the Browsing area, <i>uncheck</i> the Enable third party browser extensions (requires restart) check box, and then click OK.</p>
<input type="checkbox"/>	<p>3. Ensure that your DMPs use the latest firmware and kernel versions.</p> <p>To check the firmware version on a DMP, log in to its local instance of DMPDM, and then click About. If you see that you must upgrade the firmware, installable files are located on the software CD that you received from Cisco after you:</p> <ul style="list-style-type: none"> <li>• Purchased DMM-DSM 5.1.</li> <li>• Paid to upgrade from an earlier release.</li> <li>• Used the Product Upgrade Tool (<a href="http://www.cisco.com/upgrade">http://www.cisco.com/upgrade</a>) to verify that your valid SAS contract for an earlier Cisco DMS release entitles you to upgrade DMM-DSM and your DMPs at no additional cost.</li> </ul> <p>These files are not available for download from Cisco.com.</p> <ul style="list-style-type: none"> <li>• On DMP 4300G endpoints, install: <ul style="list-style-type: none"> <li>• 5.1.0_FCS_4300.fwimg</li> <li>• DMPkernel_A1_4300.tivella</li> </ul> </li> <li>• On DMP 4305G endpoints, install: <ul style="list-style-type: none"> <li>• 5.1.0_FCS_4305.fwimg</li> <li>• DMPkernel_A1_4305.tivella</li> </ul> </li> <li>• On DMP 4400G endpoints, install 5.1.0_FCS_4300.fwimg</li> </ul> <p>Although the kernel version does not affect your use of DMD directly, an outdated kernel version can interfere with your ability to use network storage servers and content-delivery networks successfully with DMP 4300G and 4305G endpoints. This disruption might cause playback to fail on DMP displays for your digital signage presentations.</p> <p>To learn how to install firmware on a DMP, see <a href="#">DMP Firmware Upgrade</a>.</p>
<input type="checkbox"/>	<p>4. You must enable popup windows in your web browser. See the manufacturer documentation for your browser and for any installed third-party browser extensions, such as toolbars that provide popup-blocking features.</p>
<input type="checkbox"/>	<p>5. You must already have created and saved the media files that your presentation will show. See <a href="#">Working with Assets and Categories in Your Media Library</a>.</p>
<input type="checkbox"/>	<p>6. Confirm that none of the <i>individual</i> assets that you will show has a file size any larger than 1.9 GB. If any file has a larger file size, the presentation that should show the file shows nothing and your DMP device logs will describe many errors. This size is constrained by the limits of streaming.</p>

<input type="checkbox"/>	<p>7. Make note of the combined file size for the assets in your presentation. If you will use DMS-CD or the advanced task called "File Transfer to DMP or Server" to deploy your presentation to the SD memory card inside a DMP, confirm that the combined file size for all assets that you will show in the presentation is not <i>collectively</i> any larger than:</p> <ul style="list-style-type: none"> <li>• For playback on a DMP 4300G — 900 MB.</li> <li>• For playback on a DMP 4305G — 1.9 GB.</li> <li>• For playback on a DMP 4400G — 3.8 GB.</li> </ul> <p>This size is constrained by the storage capacity of the SD memory card in a DMP, and might be less than stated here if you also have deployed assets for emergency notification. You should consider thoughtfully the storage capacity implications on any DMP where you have deployed assets for ordinary events <i>and</i> emergencies.</p> <p>If you deploy a presentation to the SD memory card, the assets from that presentation will serve as the basis for stage-one failover on that DMP. If the combined file size for a presentation is too large, only stage-two failover is available.</p> <p>To check the free space on the SD memory card in a DMP, log in to its local instance of DMPDM, and then click <b>Internal Storage</b>. See the "Understanding Content Substitution (Failover)" topic in <i>User Guide for Cisco Digital Media Player Device Manager 5.1</i> on Cisco.com.</p>
<p>Recommended Best Practices</p>	
<input type="checkbox"/>	<p>8. Understand the factors that can interfere with smooth playback in streaming media. Playback of media in a presentation might be slow or jerky or might fail if:</p> <ul style="list-style-type: none"> <li>• You neglect to carefully consider the network bandwidth requirements and DMP memory and CPU requirements for the sum total of all assets that you will play simultaneously in a presentation.</li> <li>• Your presentation uses too many processor-intensive assets. Remember that some file types (SWF, for example) are more likely than others to require extra processing to play back.</li> <li>• Your presentation uses asset formats that we do not support.</li> <li>• You used incorrect settings when you encoded video for streaming.</li> </ul>
<input type="checkbox"/>	<p>9. Understand the effects on your presentations of the "safe area" on your DMP displays. If you use analog DMP displays that are old or inexpensive, be sure that your presentations for signage do not extend past the dotted line in DMD that designates the <i>safe area</i> all around the edge of a screen object. The safe area helps you to compensate for such displays, which use only approximately 90 percent of their screens.</p>

## Getting Started with DMD

You can create the layout for a new presentation or edit a presentation that you created previously.

### Procedure

Step 1 To start Digital Media Designer so that you can define a set of screen zones, choose Digital Signage > Presentations, and then click Start Digital Media Designer.

Step 2 When prompted, choose the option to use Java Web Start.

DMD opens.

In DMD, choose the options and enter the values that meet your requirements. To understand the options, see [DMD User Interface Reference](#).

Step 3 To save your work in DMD when you are done, choose File > Save.

Step 4 To close DMD when you are done, choose File > Exit.

Step 5 (Optional) Deploy the presentation to a DMP group. See [Scheduling Time Slots for Media and Events on DMPs](#).

Note • To show a presentation during stage-one failovers on a DMP, you must first do one of the following:

- Use DMS-CD. See [Using DMS-CD Deployment Packages to Provision Assets to DMPs](#).
- Create and deploy a "File Transfer to DMP or Server" task that saves copies of the presentation and its assets to the SD memory card inside the DMP. When you do this, DMM-DSM automatically creates a "(Go to URL)" task.

The name by default for this generated "(Go to)" task is "LOCAL - <name\_of\_presentation>" unless you checked the Emergency/Alarm check box, in which case the name is "ALARM - <name\_of\_presentation>."

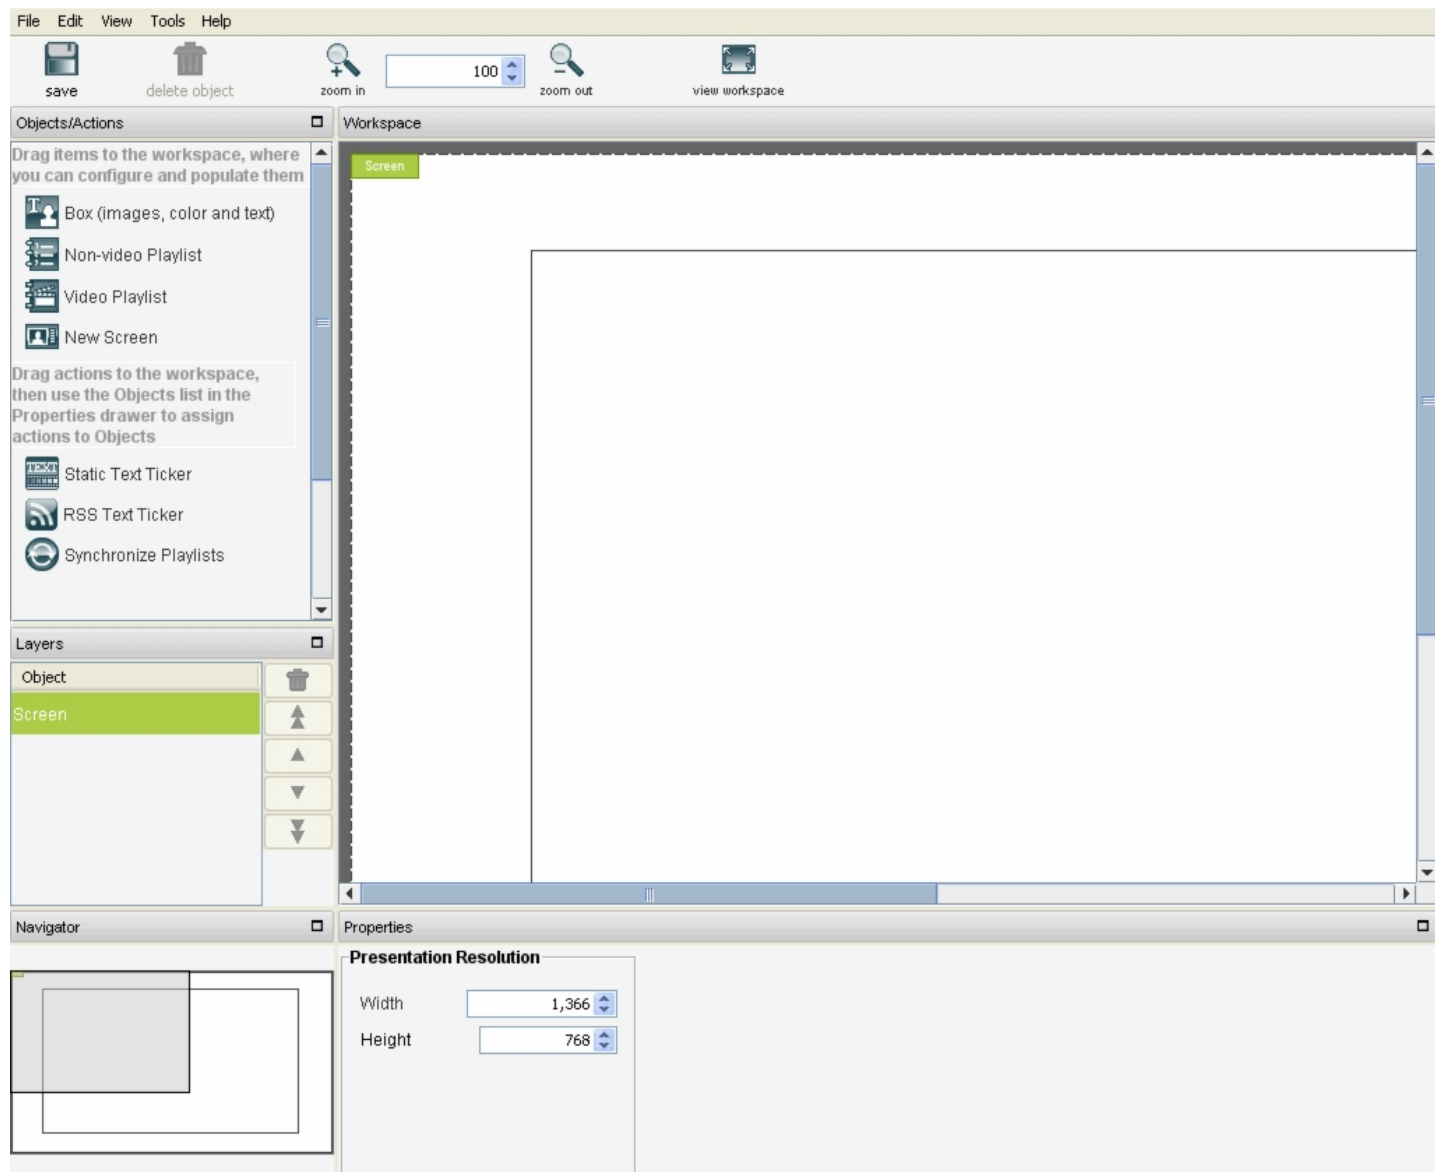

If a DMP should show its locally stored presentation at any time other than during stage-one failover, you must deploy the corresponding "(Go to) URL" task to the DMP. See [Scheduling Time Slots for Media and Events on DMPs](#).

- After you delete a presentation for which DMM-DSM automatically generated a corresponding (Go to) URL task, you must also delete that task.

## DMD User Interface Reference

[Figure 3-6](#) shows the Digital Media Designer user interface as it looks when you first open it in Java Web Start.

Figure 3-6 Digital Media Designer

In Digital Media Designer, the *workspace* is the largest part of the user interface. After you enter values for it so that it has the same height and width in pixels as the screen on your DMP display, the workspace is the canvas where you design your presentations and presentation templates for digital signage.

In addition to its workspace, the user interface in Digital Media Designer consists of four menus, a toolbar, and four dockable panels.

- [Understanding the Menus and Their Options](#)
- [Understanding the Toolbar and Its Options](#)
- [Understanding the Panels and Their Options](#)

## Understanding the Menus and Their Options

[Table 3-19](#) describes the menus in Digital Media Designer.

Table 3-19 Digital Media Designer Menus

Menu Option	Description
File Menu	
New	<p>Shows the New Design/Template dialog box, which lists all of the templates that you have saved as well as all of the presentation templates that Cisco provides with DMD, minus any presentation templates that you have deleted. Click the template that meets your requirements, such as the template that contains only a blank canvas. To start work on your design, click <b>OK</b>. Alternatively, click <b>Cancel</b> to discard your selections and return to the canvas.</p> <ul style="list-style-type: none"> <li>• <b>(Landscape   Portrait)</b> — Click a tab so that you can choose or configure preliminary options for a design that will use the corresponding orientation.</li> <li>• <i>untitled table</i> — Most rows describe one presentation template apiece that you can use as the basis for a new presentation or as the basis for a new presentation template. Alternatively, you can choose the blank canvas that one row describes. (The blank canvas is described, by default, in the first row.) To re-sort the table by the attributes that the <i>Thumbnail</i>, <i>Screen Resolution</i>, <i>Name</i>, or <i>Description</i> columns show, click the corresponding column heading. Click a row to choose the presentation template or the blank canvas that the row describes.</li> <li>• <b>Filter</b> — Enter any part of a presentation template name to filter out from the table all presentation templates whose descriptions do not match your text string. The filtering occurs in real time as you enter text.</li> <li>• <b>Resolution</b> — Enter the resolution width and height in pixels that your presentation design will use. This feature is available only after you choose to use a blank canvas. To learn the native resolution for a display, see its manufacturer documentation.</li> </ul>
Open	<p>Shows the Open dialog box, which lists all of the presentations and presentation templates that you have saved, in addition to the presentation templates that Cisco provides with DMD, minus any presentations or presentation templates that you have deleted. To open a design so that you can review or change it, choose it, and then click <b>OK</b>. Alternatively, to return to the canvas without opening a design, click <b>Cancel</b>.</p> <ul style="list-style-type: none"> <li>• <b>(Presentations   Presentation Templates)</b> — Click a tab to restrict the type of designs that the table should describe.</li> <li>• <i>untitled table</i> — Each row describes one design. To re-sort the table by the attributes that the <i>Thumbnail</i>, <i>Screen Resolution</i>, <i>Name</i>, or <i>Description</i> columns show, click the corresponding column heading. Click a row to choose the presentation or the presentation template that the row describes.</li> <li>• <b>Filter</b> — Enter any part of a design name to filter out from the table all of the saved designs whose descriptions do not match your text string. The filtering occurs in real time as you enter text.</li> </ul>
Save	<p>One of these:</p> <ul style="list-style-type: none"> <li>• If you are designing a presentation that you have not yet saved and named, opens the Save Presentation dialog box. Choose the options and enter or confirm the values that meet your requirements: <ul style="list-style-type: none"> <li>– <b>Name</b> — A unique and human-readable name for the presentation. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled. The name cannot be any more than 50 characters long.</li> <li>– <b>Description</b> — A brief description of the presentation and its purpose.</li> <li>– <b>Resolution</b> — Shows in pixels the width and height that your design will require as a supported resolution on your DMP display. Uses this syntax: <i>NNNNxNNN</i>. For example, 1366x768 would specify a display that can show as many as 1,366 pixels horizontally and as many as 768 pixels vertically. Confirm that the values you see are not any greater than what your DMP display can actually show.</li> <li>– <b>Presentation</b> — Identifies the layout as a one-time design. A presentation is a design that uses a freeform layout or uses a layout derived from a presentation template.</li> <li>– <b>Presentation Template</b> — Identifies the layout as a foundational design. A presentation template is the basis, potentially, for multiple presentations that you expect to create in the future, which all will share a common look and feel.</li> </ul> </li> </ul> <p>When you are done, click <b>OK</b> to save your work. Alternatively, click <b>Cancel</b> to discard your work.</p> <ul style="list-style-type: none"> <li>• If you are working on a layout that you saved previously, saves your work since then.</li> </ul>

Save As	<p>Opens the "Save As Presentation or Presentation Template" dialog box, so that you can save multiple variants of a presentation or a template, or so you can overwrite a saved presentation or saved presentation template that you no longer need. Choose the options and enter or confirm the values that meet your requirements:</p> <ul style="list-style-type: none"> <li>• <b>{Presentations   Presentation Templates}</b> tab — Determines whether the table under the tab shows information about your saved presentations or about your saved presentation templates. Each row in the table shows a thumbnail picture of the corresponding design and describes its attributes.</li> <li>• <b>Name</b> — A unique and human-readable name for the design. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.</li> <li>• <b>Description</b> — A brief description of the design and its purpose.</li> <li>• <b>{Resolution   Screen Resolution}</b> — Shows in pixels the width and height that your design will require as a supported resolution on your DMP display. Uses this syntax: <i>NNNxNNN</i>. For example, 1366x768 would specify a display that can show as many as 1,366 pixels horizontally and as many as 768 pixels vertically. Confirm that the values you see are not any greater than what your DMP display can actually show.</li> <li>• <b>Presentation</b> — Select this radio button to identify the layout as a one-time design that uses a freeform layout or a layout that you will derive from a presentation template.</li> <li>• <b>Presentation Template</b> — Select this radio button to identify the layout as a foundational design. A presentation template is the basis, potentially, for multiple presentations that you expect to create in the future, which all will share a common look and feel.</li> </ul> <p>When you are done, click <b>Save</b> to save your work. Alternatively, click <b>Close</b> to discard your work.</p>
Delete Presentation/ Template	<p>Shows the Delete Presentation(s) and/or Presentation Template(s) dialog box, which lists all of the presentations and presentation templates that you have saved, in addition to the presentation templates that Cisco provides with DMD, minus any presentations or presentation templates that you have already deleted.</p> <ul style="list-style-type: none"> <li>• <b>{Presentations   Presentation Templates}</b> — Click a tab to restrict the type of designs that the table should describe.</li> <li>• <i>untitled table</i> — Each row describes one design. To re-sort the table by the attributes that the <i>Thumbnail</i>, <i>Screen Resolution</i>, <i>Name</i>, or <i>Description</i> columns show, click the corresponding column heading. Click a row to choose the presentation or the presentation template that the row describes.</li> <li>• <b>Filter</b> — Enter any part of a design name to filter out from the table all of the saved designs whose descriptions do not match your text string. The filtering occurs in real time as you enter text.</li> </ul> <p>To delete a design, choose it, and then click <b>Delete Selected Presentation</b>. To return to the canvas whether or not you have deleted any designs, click <b>Close</b>.</p>
Rename Presentation/ Template	Shows the Rename dialog box, which you can use in conformance to this recommended best practice: "Instead of creating a presentation that is similar to one that used to be in your schedule, simply modify the old presentation and reschedule it."
Exit	Closes DMD.
Edit Menu	
Whole Screen	Expands the selected object so that its height and width become the same as the total height and width of your presentation. To reduce its dimensions again if you prefer to use smaller dimensions, edit the height and width values that the Properties panel shows for the selected object. This feature is not available for you to use unless at least one object is selected on the workspace or in the Layouts panel.
Safe Area	Expands the selected object so that its height and width become the same as the height and width of the safe area in your presentation. To change its dimensions again, edit the height and width values that the Properties panel shows for the selected object. This feature is not available for you to use unless at least one object is selected on the workspace or in the Layouts panel.
Delete	Deletes the selected object or action from the workspace. This feature is not available for you to use unless at least one object or action is selected on the workspace or in the Layouts panel.
Up	Moves the selected object up by one layer, in the sense that your presentation might position overlapping screen zones as if they are stacked or piled on top of each other. When you use this option, you make the selected screen zone more prominent than it was before you moved it. This feature is not available for you to use unless at least one object is selected on the workspace or in the Layouts panel.
Down	Moves the selected object down by one layer. When you use this option, you make the selected screen zone less prominent than it was before you moved it. This feature is not available for you to use unless at least one object is selected on the workspace or in the Layouts panel.

Top	Moves the selected object to the top layer. When you use this option, the effect is that you make the selected screen zone more prominent than <i>every other</i> screen zone. This feature is not available for you to use unless at least one object is selected on the workspace or in the Layouts panel.
Bottom	Moves the selected object to the bottom layer. When you use this option, the effect is that you make the selected screen zone <i>least</i> prominent of all your screen zones. This feature is not available for you to use unless at least one object is selected on the workspace or in the Layouts panel.
View Menu	
{Objects/ Actions   Layers   Navigator   Properties}	Expands or collapses the respective panel. To understand the panels, see <a href="#">Understanding the Panels and Their Options</a> .
Tools Menu	
Add Action >	As described in the " <a href="#">UI Reference: Elements for Objects and Actions</a> " section of <a href="#">Table 3-21</a> : <ul style="list-style-type: none"> <li>• (Static   RSS) Text Ticker</li> <li>• Synchronize Playlists</li> </ul>
Add Object >	As described in the " <a href="#">UI Reference: Elements for Objects and Actions</a> " section of <a href="#">Table 3-21</a> : <ul style="list-style-type: none"> <li>• Screen</li> <li>• Box</li> <li>• Video Playlist</li> <li>• Nonvideo Playlist</li> </ul>

### Understanding the Toolbar and Its Options

The toolbar in DMD contains buttons that you click and controls for the degree of workspace magnification. To understand the toolbar, see [Table 3-20](#).

Table 3-20 Digital Media Designer Toolbar

Icon	Tool Name	Description
	Save Changes	Saves your work.
	Delete Selected Object	Deletes from your design the one object or action that is selected on the workspace.
	Zoom In	Increases the degree of magnification by 10 percentage points per click.
	Incremental Zoom	Increases or decreases the degree of magnification by 1 percentage point per click, depending respectively on whether you click the arrow head that points up or the arrow head that points down. Alternatively, you can do either or both of the following: <ul style="list-style-type: none"> <li>• Use the scroll wheel on your mouse to increase or decrease the degree of magnification.</li> <li>• Enter any percentage value in the unlabeled field, and then press Enter.</li> </ul>
	Zoom Out	Decreases the degree of magnification by 10 percentage points per click.
	View Workspace	Increases or decreases the degree of magnification by whatever percentage amount is necessary to fit the entire screen object inside the visible workspace.

### Understanding the Panels and Their Options

Panels are dockable controls in the Digital Media Designer user interface that you can move, resize, expand, or collapse, which contain features to help you design presentations for digital signage. All panels are opened by default. To understand how to use the features of a particular panel, see:

- [UI Reference: Elements for Objects and Actions](#)

- [Understanding the Layers Panel and Its Options](#)
- [Understanding the Navigator Panel and Its Options](#)
- [Understanding the Properties Panel and Its Options](#)

### Moving Panels

To move a panel so that its location is more convenient to you, drag it by its title bar to the location that you prefer. The only constraint when you move a panel is that one side of it will always be pinned to the workspace. DMD rearranges and resizes the other panels automatically to create an open space for the panel that you are moving.

### Resizing Panels

To change the width or height of a panel, click and drag the vertical or the horizontal border between it and the workspace. The width or height of nearby panels changes automatically in response.

### Collapsing and Expanding Panels

- To collapse a panel, click the square button at the right end of its title bar. In its collapsed form, the entirety of a panel is reduced to button form, where the button shows nothing except the panel name in very small type and is pinned to one edge of the DMD window.
- To reopen a panel temporarily after you collapse it, click where you see its name pinned to the edge of the DMD window. After you move your mouse away from the panel, it closes again automatically.
- To reopen a panel that you collapsed, click where you see its name pinned to the edge of the DMD window, and then click the square button at the right end of its title bar.

## Using Box Objects

### Procedure

---

**Step 1** Drag a box object  to the workspace from the Objects/Actions panel to start using it. Alternatively, choose Tools > Add Object > Box.

**Step 2** Click the box object on the workspace.

**Step 3** Choose options and enter values in the Properties panel to start populating and configuring your box object.

---

**Tip** When you choose which layer to use for a box object in your presentation, ensure that you choose a layer that is lower than *any* layer that your playlist objects use in the same presentation. Otherwise, your DMP displays will not show the screen zone that the box object represents.

---

If you right-click a box object after it is part of your presentation, a shortcut menu appears. To understand its options, see the "[Edit Menu](#)" section in [Table 3-19](#).

---

### Related Topics

- [Understanding the Properties of a Box Object That is Associated with a Ticker Action](#)
- [UI Reference: Elements for Objects and Actions](#)
- [Understanding the Layers Panel and Its Options](#)
- [Understanding the Properties Panel and Its Options](#)

## Understanding the Properties of a Box Object That is Associated with a Ticker Action

When you associate a box object with a ticker action, the Properties panel values that you see might be confusing for the box object after you click it on the workspace. Furthermore, these confusing attributes in the Properties panel differ according to which type of ticker action you use.

- When you use a static ticker, there are two possible scenarios:
  - In the first scenario, you enter Properties panel text for the box object but *not* for the ticker action, so the ticker shows the text that you entered for the box object because it has no alternative.
  - In the second scenario, you enter Properties panel text separately for both the box object *and* the ticker action, and the ticker ignores the text that you entered for the box object because instead, it shows the text that you entered for the ticker action. In that case, even though you can see in the Properties panel that you entered text for your box object, DMD ignores that text.
- When you use an RSS ticker, there is only one relevant scenario — assuming that the server for your RSS feed is reachable and configured correctly. The RSS ticker always shows what it receives from the RSS server, without regard for any text that you might have entered in the Properties panel after you selected your box object on the workspace or in the Layouts panel. Even though you can see in the Properties panel that you

entered text for your box object, DMD ignores that text.

## Working with Presentation Playlists

**Tip** If you include a bitmapped image as part of a playlist in DMD, be sure that the playlist object uses the same height and width in pixels that the bitmapped file uses. If the playlist object is too small, the bitmapped image that it includes will be cropped. The bitmapped will not be resized or scaled automatically.

- [Using Nonvideo Playlist Objects](#)
- [Using Video Playlist Objects](#)
- [Synchronizing the Playback Timing of Two Playlists](#)
- [Understanding the Properties of Two Playlist Objects That Are Synchronized](#)

### Using Nonvideo Playlist Objects

A presentation can contain any number of nonvideo playlist objects at a time, and you can place this object type on any layer in your presentation.

#### Procedure

**Step 1** Drag a nonvideo playlist object () to the workspace from the Objects/Actions panel to start using it.

Alternatively, choose Tools > Add Object > Nonvideo Playlist.

**Step 2** Click this object on the workspace or in the Layouts panel.

**Step 3** Choose options in the Properties panel to populate and configure this object.

For example, the Properties panel is where you define the playback sequence for a playlist and define the playback duration for each entry that it contains.

**Tip** If you right-click a playlist object on the workspace, a shortcut menu appears, from which you can choose options to edit the playlist.

#### Related Topics

### Using Video Playlist Objects

You can place a video playlist object on any layer. However, when you use this object type, it becomes the topmost layer automatically. Other object types (nonvideo playlist objects and box objects) are rendered in back of the video playlist object, which means that you cannot use them to create an overlay or mask for video.

**Tip** To use an overlay of that kind, we recommend that you encode the video file itself so that it includes an overlay before you add it to your media library. Alternatively, you can use JavaScript to create a presentation outside of DMD.

A presentation cannot contain any more than *one* video playlist object at a time.

#### Procedure

**Step 1** Drag a video playlist object () to the workspace from the Objects/Actions panel to start using it.

Alternatively, choose Tools > Add Object > Video Playlist.

**Step 2** Click the object on the workspace, and then use the Properties panel to populate and configure it.

For example, the Properties panel is where you define the playback sequence for a playlist and define the playback duration for each entry that it contains.

---

**Tip** If you right-click a playlist object on the workspace, a shortcut menu appears, from which you can choose options to edit the playlist.

---

#### Synchronizing the Playback Timing of Two Playlists

You can use a synchronization action to bind two playlist objects together in a presentation, imposing the playback timing from the *primary* playlist on, and overriding, the playback timing for the *secondary* playlist. In this way, you can synchronize transitions in two playlists, no matter how asynchronous those transitions would be ordinarily.

#### Procedure

---

**Step 1** To add the potential for synchronization to your presentation, drag a Synchronize Playlists action to the workspace from the Objects/Actions panel.

Alternatively, choose Tools > Add Action > Synchronize Playlists.

**Step 2** In the Properties panel:

- a. Choose the primary playlist object from the Primary Playlist list.
- b. Choose the secondary playlist object from the Secondary Playlist list.

---

#### Understanding the Properties of Two Playlist Objects That Are Synchronized

The Properties panel values that you see for a selected playlist object (🎞️ or 📺) might be confusing if you have used a synchronize playlists action (🔗) to override the natural timing of transitions between assets in the playlist.

To avoid this potential for confusion, plan ahead, by keeping in mind the eventual synchronization of two playlists when you populate them and configure the playback duration for each asset. Otherwise, synchronization might truncate the playback for one or more assets in the secondary playlist.

#### Using New Screen Objects to Clear the Workspace and Discard Any Unsaved Work

---

**Caution** Completing this procedure closes the active presentation in DMD and discards all unsaved work in it.

---

#### Procedure

---

**Step 1** Drag a new screen object (🖥️) to the workspace from the Objects/Actions panel.

Alternatively, choose Tools > Add Object > New Screen.

Step 2 Confirm, when DMD asks you, that you really *do* want to proceed.

The workspace is cleared and all unsaved work is discarded.

#### Understanding the DMD Concepts that Apply to Text Actions

dynamic text	<p>Any message that is obtained from a an RSS feed and which is automatically replaced by a newer message after:</p> <ul style="list-style-type: none"> <li>• The author publishes an updated RSS feed.</li> <li>• A DMP receives this updated version.</li> </ul> <p>Furthermore, the message populates a <a href="#">ticker</a>.</p> <p>Even though 'dynamic text' has had fading or motion effects applied to it, these effects are not what we mean when we say <i>dynamic</i>.</p>
static text	<p>Any message that is repeated forever or until you enter a new message manually replace the older message. Furthermore, the message populates a <a href="#">ticker</a>.</p> <p>For our purposes, the term 'static text' does not mean text that is motionless.</p>
ticker	<p>The text of any message that fades in and out or scrolls (vertically or horizontally), depending on the capacity of a DMP that loads it for playback. Furthermore, the on-screen region that shows this text was defined in DMD as part of the layout for a presentation.</p> <p>For our purposes, the word 'ticker' is not limited to — and does not promise — horizontal scrolling in the style of a ticker tape.</p>

#### Using Static Text Actions

You can add the potential for a [static text ticker](#) to your presentation, and then associate this action with a box object. You can use only one [ticker](#) per box object.

#### Procedure

---

Step 1 Drag a static text ticker action  to the workspace from the Objects/Actions panel.

Alternatively, choose its type from the Tools menu. The size and placement of this action on the workspace do not matter because actions do not, by themselves, occupy any space.

Step 2 Click the action on your workspace.

Step 3 In the Properties panel:

- Enter text for your ticker in the Text field.
- From the Assign to Object list, select the box object that should contain the ticker.

---

#### Related Topics

- [Using RSS Text Actions](#)
- [UI Reference: Elements for Objects and Actions](#)

#### Using RSS Text Actions

You can add the potential for an RSS text [ticker](#) to your presentation, and then associate this action with a box object. You can use only one ticker per box object.

#### Procedure

---

Step 1 Drag an RSS text ticker action  to the workspace from the Objects/Actions panel.

Alternatively, choose its type from the Tools menu. The size and placement of this action on the workspace do not matter because actions do not, by themselves, occupy any space.

**Step 2** Click the action on your workspace.

**Step 3** In the Properties panel:

- a. Enter the RSS feed source URL for your ticker in the RSS URL field.

The feed that you specify should be one that does not include any file enclosures. We recommend as a best practice that you use only RSS feeds over which you have direct editorial control.

- b. Choose the box object from the Assign to Object list that should contain this ticker.

An RSS ticker action will not show data from feed on your DMP displays until you finish configuring the association between the action and the object, save your work, and deploy it to DMPs. Your DMPs will check the RSS feed for updated content and refresh the ticker every 15 minutes.

## Related Topics

- [Using Static Text Actions](#)
- [UI Reference: Elements for Objects and Actions](#)

## UI Reference: Elements for Objects and Actions

An action is a behavior that you can add to an object in your presentation. Each object occupies a layer.

Table 3-21 Digital Media Designer — The Objects/Actions Panel

Icon	Tool Name	Description
	Box	Creates a new screen zone and a new layer where you can show: <ul style="list-style-type: none"> <li>• One bitmapped image in JPEG, GIF, or PNG format. (Other file types are not supported.) If you place a bitmapped image in a box object, be sure that the box object uses the same height and width in pixels that the bitmapped file uses. If the box object is too small, the displayed image will be cropped. It will not be resized or scaled automatically.</li> <li>• One text string. The string can be completely motionless and presented without any visual effects when you show it on a DMP display or you can show it in the form of a ticker.)</li> <li>• One background color.</li> </ul>
	Nonvideo Playlist	Creates a new screen zone and a new layer where you can arrange and play back in any combination an ordered sequence of: <ul style="list-style-type: none"> <li>• JPEG, GIF, and PNG files.</li> <li>• SWF files.</li> <li>• Pages on web servers.</li> </ul>
	Video Playlist	Creates a new screen zone and a new layer where you can arrange and play back in any combination an ordered sequence of: <ul style="list-style-type: none"> <li>• Video files:               <ul style="list-style-type: none"> <li>– MPEG-1 and MPEG-2 files for all DMP model types.</li> <li>– MPEG-4 part 10 H.264 files on the DMP 4400G model exclusively.</li> </ul> </li> <li>• Multicast video streams.</li> <li>• SWF files.</li> <li>• JPEG, GIF, and PNG files.</li> <li>• Pages on web servers.</li> </ul>
	New Screen	Restarts your design process by closing the open presentation — discarding any design work in it that you have not saved — and showing to you a completely new representation of a blank DMP display as your workspace. Because each presentation and each presentation template can contain only one screen, the new workspace does not have any objects, actions, or playlists associated with it — even if the closed presentation used them.
	Static Text Ticker	Places a static ticker action on your workspace.  A ticker action will not produce a visible ticker on your DMP displays until you finish configuring the association between the action and the object, save your work, and deliver your presentation to a DMP as part of a scheduled deployment.
	RSS Text Ticker	Places an RSS ticker action on your workspace. Its size and placement on the workspace do not matter because actions do not, by themselves, occupy any space on a screen.
	Synchronize Playlists	Places a synchronization action on your workspace. Its size and placement on the workspace do not matter because actions do not, by themselves, occupy any space on a screen.

## Understanding the Layers Panel and Its Options

The Layers panel lists all of the objects that you have dragged to your workspace, sorted by their placement on different layers. Each layer holds one object only, and each object represents one screen zone.

- The object at the bottom of the list is also the screen zone that is behind or under all of your other screen zones in this presentation.
- The object at the top of the list is also the screen zone that is in front of or on top of all of your other screen zones in this presentation.
- If you select an object in the list, you can use buttons in the Properties panel to manipulate the selected object.

Table 3-22 Digital Media Designer — The Layers Panel

Icon	Tool Name	Description
	Remove	Deletes the selected object.
	Bring to Front	Moves the selected object to the absolute top layer.
	Move Up	Moves the selected object up by one layer per click.
	Move Down	Moves the selected object down by one layer per click.
	Send to Back	Moves the selected object to the absolute bottom layer.

## Understanding the Navigator Panel and Its Options

The Navigator panel shows a wireframe thumbnail view of, and scrolling controller for, your workspace in DMD. The Navigator panel is especially useful when you design presentations for high-definition DMP displays, because you might not be able to see the entire design all at one time in the workspace area.

To scroll the workspace vertically and horizontally, click and move the small gray rectangle from place to place inside the Navigator panel.

## Understanding the Properties Panel and Its Options

Shows the editable and uneditable properties of the selected object or action. The type of properties that you see depend on the type of object or action that you select on the workspace or in the Layouts panel.

Table 3-23 Digital Media Designer — The Properties Panel

Element	Icon and Description
Border {Style   Width   Color}	Choose options to define the border attributes, if your box object should be enclosed in a border.
Assign to Object	Select the box object that represents the screen zone where the selected ticker action should show its ticker.
Duration	Shows the playback duration for each asset in the selected playlist. If you use the Synchronize Playlists action to make the selected playlist secondary, the duration values shown here might not have any bearing on how long an asset plays back before the playlist transitions to the next asset. There is no factory default duration value for nonvideo assets, so you must enter all such duration values manually.
Type	Signifies the type of playlist. This value is not editable.
Name	An editable field or an uneditable column in a table: <ul style="list-style-type: none"> <li>• Enter a unique and meaningful name in the Name field to identify the selected object or action.</li> <li>• Click the Name column heading to sort the table by the values in that column.</li> </ul>
Playlist Items	To understand the elements in the Playlist Items area, see <a href="#">UI Reference: Elements to Populate Playlists</a> . To learn about the workflow to create a playlist, see <a href="#">Creating and Organizing Presentation Playlists</a> .
Primary Playlist	Select the playlist object whose transition timing between assets during playback should override the equivalent transition timing of a secondary playlist.
RSS URL	Enter the source URL for the RSS feed.
Effect	Choose whether the ticker should fade or scroll and, for scrolling, choose the direction of motion. For a DMP 4300G or 4305G, only the fading effect is supported. For a DMP 4400G, all effects are supported.

Secondary Playlist	Select the playlist object whose transition timing between assets during playback should be overridden by the equivalent transition timing from the primary playlist.
Text (Size   Color   Horizontal Alignment   Vertical Alignment   Text)	All of the following: <ul style="list-style-type: none"> <li>Increases or decreases the text size (in pixels), depending respectively on whether you click the arrow head that points up or the arrow head that points down.</li> <li>Changes the text size (in pixels) to the numeric value that you enter.</li> <li>Changes the text color to match a color that you select after you click ... or to match a hexadecimal color value that you enter.<sup>1</sup></li> <li>Changes the horizontal or vertical alignment of text to match the alignment types that you select.</li> <li>Shows exactly the text that you enter in the Text field.</li> </ul>
URL	An uneditable column in a table, where each row shows the URL for one remote playlist asset.
{Width   Height}	Enter in pixels the respective width and height of the selected screen zone object.
{X   Y}	X and Y coordinates that represent the placement of the first pixel (when reading from left to right and top to bottom) of the selected object.

<sup>1</sup> The text color that you use should be one that results in clear and legible text against the background color that you specified; if there is not enough difference between the two colors, your audience might not see information clearly when you use this presentation to show text on a DMP display.

## Creating and Organizing Presentation Playlists

Presentations that you design in DMD can contain *presentation playlists* that you populate. A presentation playlist contains assets from one or more media library categories or remote servers and shows these assets in the sequence that you specify. The only way to save a presentation playlist and deploy it to your DMPs is inside a presentation.

**Caution** Important considerations apply to your presentation playlists when you use ACNS. Before you delete a channel from ACNS, you must first remove from the shared schedule for DMM-DSM and DMM-ETV every presentation playlist that calls upon the channel. Then, you must edit all affected presentation playlists so that they do not use the channel. Otherwise, if a presentation playlist is scheduled for deployment but you delete an ACNS channel that it uses for content distribution, you will be prevented from deleting the playlist manually even though your DMPs cannot obtain its assets successfully from the deleted channel.

### Before You Begin

- You must add assets to your media library before you can organize them in a playlist.
- You must add a DMP to DMM-DSM before you can deploy any presentations to it, and you must organize your DMPs into groups before you can deploy any presentation to a group. The DMP Groups list does not show any DMPs until you add at least one.
- You must add an external deployment server to DMM-DSM before you can deploy any presentations to it. Given this, it is important for you to understand that:
  - The DMP Groups list will never describe external deployment servers.
  - You cannot use the Schedules > Play Now feature with external deployment servers.
  - All deployments to your external deployment servers require that you use the Schedules > Play in Future feature.

**Tip** We recommend that you use the advanced task called DMP Startup URL and enter a value for either the Video URL or the Browser URL. If both values are blank, you might find that your DMP sometimes loses its ability to play even the Shockwave Flash files that it has played successfully in the past.

### Procedure

**Step 1** In DMD, do any of the following:

- Drag a playlist object (video or nonvideo) to the workspace from the Objects/Actions panel.
- Click a playlist object that you already placed on your workspace.
- Click a playlist object in the Layers panel.

The Properties panel now contains an area called "Playlist Items," where you can add, remove, or rearrange assets in a presentation playlist.

**Step 2** In the Playlist Items area, enter values and select options that meet your requirements.

Step 3 To open the Content Chooser dialog box, where you configure a presentation playlist, click

Step 4 To save a presentation playlist after you have populated and organized it and set the playback duration for each of its assets, click **Submit** in the Content Chooser dialog box.

Step 5 To save a presentation or a template after you have finished designing it, select **File > Save in DMD**.

Step 6 Deploy the presentation to the DMP displays that should show it.

#### UI Reference: Elements to Populate Playlists

The Playlist Items area loads inside the Properties panel when the selected object on your workspace is either a video playlist object or a nonvideo playlist object.

Table 3-24 Elements for Managing Presentation Playlists

Element	Icon and Description	
<i>unlabeled check box</i>	Click to select (or to deselect) one or more assets so that you can change the playback sequence of, or remove assets from, the playlist that you are editing.	
<i>asset location</i>		<i>media library</i>
		<i>remote server</i>
<i>IANA Internet media type</i>	Shows a miniature file icon to represent the asset that the corresponding row describes. DMD identifies assets according to their IANA-registered Internet media types. To learn about media types and understand the requirements to register them, see <a href="http://www.iana.org/assignments/media-types/">http://www.iana.org/assignments/media-types/</a> .	
		Video asset of any supported type, whether a file or a multicast stream.
		Shockwave Flash 6 or 7 asset, if your DMP is a 4300G or a 4305G. Alternatively, a Shockwave Flash 6, 7, 8, or 9 asset, if your DMP is a 4400G.
		JPEG, GIF, or PNG asset.
		Web page.
<b>Name</b>	A unique and human-readable name that you entered.	
<b>Duration, sec</b>	The playback duration in seconds for the asset that the corresponding row describes. Click a value to see and use its duration control (  ), which is hidden until you click the value. To increase the playback duration by 1 second, click the top of a control. Alternatively, to reduce the playback duration by 1 second, click the bottom of a control. To increment or decrement the duration value quickly, hold down the mouse button after you click the top or the bottom of a control.	

URL	Shows the storage URL for the asset that the corresponding row describes.	
Add		Opens the Content Chooser dialog box, where — to populate a playlist — you choose assets from your media library or enter the URLs for remotely stored assets.
Remove		Removes all of the selected assets from the relevant playlist. Nonetheless, the assets remain in your media library or on the remote server from which you selected them.
Move Up		Reorders the playlist so that the selected asset moves up one row, exchanging places with the asset that was above it.
Move Down		Reorders the playlist so that the selected asset moves down one row, exchanging places with the asset that was below it.
	Type	— The file format or JPEG.

#### Understanding the Content Chooser and Its Options

The Content Chooser dialog box is part of DMD. You use the Content Chooser to populate a presentation playlist.

#### Procedure

---

**Step 1** To save your work and use a presentation playlist that you have populated, click **Submit**. Alternatively, to discard your work, click **Cancel**.

---

**Tip** We recommend that you use the advanced task called DMP Startup URL and enter a value for either the Video URL or the Browser URL. If both values are blank, you might find that your DMP sometimes loses its ability to play even the Shockwave Flash files that it has played successfully in the past.

---

#### UI Reference: Elements for Choosing the Assets to Populate a Presentation Playlist

Table 3-25 Elements to Manage Assets in Playlists

Element	Icon and Description
<i>Click the Content Manager tab or the URL tab to choose whether the Available Content table should describe assets in your media library or help you to select an asset that is stored remotely.</i>	
Content Manager tab	
Content Groups	An object selector that lists all categories in your media library. Click one category that the Available Content table should describe.
Available Content	A table, which describes every available asset in the category that you clicked.
	 <b>Add to Playlist</b> — Adds to the Selected Items table whichever assets you have checked in the Available Content table, so that they might be included in a playlist. To add more assets to the Selected Items table, repeat this step as many times as necessary.
	— <b>Name</b> — The name that you entered for the asset.
	— <b>Type</b> — Says whether the asset is stored locally or should be retrieved from an HTTP URL.

	— Path — Shows the HTTP URL for the described asset.
URL tab	
External URL	Choose an asset that is stored remotely, so that you can add it to the Selected Items table.
	— Name — Enter a name to describe the asset.
	— URL — Enter the HTTP URL for the remote asset, or enter the UDP URL and port number.
	 Add URL — Add the remote asset to the Selected Items table, so you can might include it in a playlist.
Selected Items	A table, which describes every asset that you have chosen so far for the playlist that you are populating. Sorts assets according to their order of playback. Also, includes features to change the playback order, change the duration of playback for each asset, and remove assets from the playlist.
	 Move Down — Changes the order of playback for assets in your playlist. Reorders the list so that the one asset whose name you have highlighted moves down by one row, exchanging places with the asset that was below it.
	 Move Up — Changes the order of playback for assets in your playlist. Reorders the list so that the one asset whose name you have highlighted moves up by one row, exchanging places with the asset that was above it.
	 Remove Assets from Playlist — Removes any number of assets from the playlist that you are configuring. You must first select one or more check boxes, corresponding to the assets that you want to remove. Even though you remove these assets from the playlist, they remain available in your media library or on the remote server that you specified.
	— Name — The name that you entered for the asset.
	— Duration, sec — The number of seconds that the asset will be visible when you show it on a DMP display. Click a value to see and use its duration control (  ), which is hidden until you click the value. To increase the playback duration by 1 second, click the top of a control. Alternatively, to reduce the playback duration by 1 second, click the bottom of a control. To increment or decrement the duration value quickly, hold down the mouse button after you click the top or the bottom of a control. <ul style="list-style-type: none"> <li>• If you do not specify a duration for playback of video and SWF assets, the file plays to completion one time.</li> <li>• If you do not specify a duration for playback of images or web pages, their duration is continuous.</li> </ul>
— URL — Shows the HTTP URL for the described asset.

Creating and Organizing Ordinary Playlists

Note • Playlists that you create under the Digital Signage tab are separate from the *presentation playlists* that you create in DMD but they are not mutually exclusive. You can assign ordinary playlists or presentation playlists interchangeably to zones in your presentations.

- You cannot add an advanced task (or a system task) to a playlist. However, you can schedule advanced tasks to occur between playlists.

Procedure

Step 1 Choose Digital Signage > Playlists.

Step 2 Select the options and enter the values that meet your requirements.

When you choose options anywhere on the Playlists page, it is updated automatically to show the options and features that are relevant to your selection.

Related Topics

Navigation

Digital Signage > Playlists

Table 3-26 Elements to Define an Ordinary Playlist

Element	Description
Title	The title for this playlist.
Assets	<p>A table in which each row describes one asset. Attributes are sorted into these columns:</p> <ul style="list-style-type: none"> <li>• <b>Title</b> — A unique and human-readable name for the asset.</li> <li>• <b>File Type</b> — the type that best describes the asset: Video, Shockwave Flash, Images, HTML, or Firmware.</li> <li>• <b>{Estimated   Planned}</b> — Respectively: <ul style="list-style-type: none"> <li>– An estimate of the actual running time from start to finish of the described asset, without regard for the amount of time the playlist has reserved to show it.</li> <li>– The amount of time that is reserved in the playlist to show this asset.</li> </ul> </li> </ul> <p>A planned duration of 0 (zero) seconds in the playlist causes a video to play from beginning to end. To skip a video instead of playing it, you must remove it from the playlist. Nonvideo assets must have a duration of 1 second or more for each that you include in a playlist.</p> <ul style="list-style-type: none"> <li>• <b>Size</b> — The file size.</li> <li>• <b>Delete</b> —</li> </ul> <p>To select additional assets from your media library that this playlist should include, click <b>Add Assets</b>. To change the sequence of playback for assets in this playlist, select an asset that should move and then click either <b>Move Playlist Item Up</b> or <b>Move Playlist Item Down</b>.</p>
Randomize	Enables or disables a randomized sequence of playback for assets in this playlist. To turn randomization on, check the check box. To turn randomization off, uncheck the check box.
Resolution	Choose the resolution of your DMP display from the <b>Select</b> list or enter its width and height, in pixels.
Description	A description of this playlist. The description is optional.
Playlist Owner	Your name or the name of the person who manages this playlist.

### Choosing the Content Delivery System to Use in Your Digital Media Network

In digital media networking, it is sometimes necessary to distribute large files over networks where bandwidth capacity is moderately or severely constrained. The challenge of doing this successfully is that delivering HD or SD video streams and deploying large assets often requires an average data transfer rate of greater than 6 million bits per second (Mbps, or *megabits*). Digital media networks can compound your need for bandwidth.

There is a practical maximum limit in any WAN for how much bandwidth each of its remote sites can use, and a content delivery solution can help you to manage multicast file distribution efficiently to the DMPs that operate at your remote sites. In this way, content delivery solutions can enhance the scalability of your existing network infrastructure and adapt it for digital media deployments.

Table 3-27 Comparison of Supported Content-Distribution Methods

Content Distribution Method	Use Cases with Cisco DMS

DMS-CD	<p>DMS-CD might be the best choice for your digital media network if these statements are true:</p> <ul style="list-style-type: none"> <li>You use Cisco DMS for digital signage only and do not need any content-distribution support for desktop video.</li> <li>You <i>do not</i> show live video or high-definition video.</li> <li>Each site in your WAN has fewer than three DMPs.</li> <li>Each site in your WAN has bandwidth capacity of less than T1/E1.</li> <li>On average, each site in your organization downloads less than 200 MB daily.</li> <li>It takes longer than 5 hours in your WAN to download 300 MB at 128 Kbps.</li> </ul>
ACNS	<p>ACNS might be the right choice for your digital media network if these statements are true:</p> <ul style="list-style-type: none"> <li>You use Cisco DMS for both digital signage and desktop video.</li> <li>You show high-definition video.</li> <li>Each site in your WAN has at least three DMPs or at least three Video Portal users.</li> <li>Each site in your WAN has bandwidth capacity of less than T2/E2.</li> <li>On average, each site in your organization downloads 200-300 MB of video daily.</li> <li>You need a comprehensive platform for media-delivery.</li> </ul>
WAAS	<p>WAAS might be the right choice for your digital media network if these statements are true:</p> <ul style="list-style-type: none"> <li>You use Cisco DMS for both digital signage and desktop video.</li> <li>You use Windows Media for live desktop video streams.</li> <li>Each site in your WAN has at least three DMPs or at least three Video Portal users.</li> <li>Each site in your WAN has bandwidth capacity of less than T2/E2.</li> <li>On average, each site in your organization downloads more than 300 Mbps of video daily.</li> <li>You want to use the Common Internet File System (CIFS) protocol when provisioning assets to your DMPs.</li> </ul>

**Note** Commonly, the bandwidth capacity required to deliver an HD video stream ranges from 10 Mbps to 15 Mbps, while an average SD video stream uses approximately one-third as much capacity as an HD video stream does. However, these parameters are highly configurable and will vary from one WAN to another.

#### Related Topics

- [About the Built-in Mechanism for Content Distribution, DMS-CD](#)
- [Understanding DMP Support for the CIFS Protocol](#)
- [Configuring the Settings to Use ACNS or WAAS](#)

#### Understanding DMP Support for the CIFS Protocol

Common Internet File System (CIFS) is a network protocol for sharing files and for obtaining remote access to those files.

A *CIFS share* is a mount point on a network attached storage device that supports the CIFS protocol. When you choose WAAS as your content distribution method, DMM-DSM instructs DMPs to use the CIFS protocol and mount a network share, such as a Windows shared folder, that uses CIFS. The following restrictions apply to our support for CIFS:

- There can be only one CIFS mount point, which all DMPs use in common. You cannot set DMPs or DMP groups to mount any CIFS share except this one.
- Either your DMPs all use CIFS, or none of them do.
- It might be necessary for you to upgrade the kernel that your DMP 4300G and DMP 4305G endpoints use, so that they can support the CIFS protocol.

**Tip** There is no need to upgrade the kernel on a DMP 4400G. Every DMP 4400G supports CIFS already.

#### Related Topics

- [Upgrading the Kernel in DMP 4300G and 4305G Endpoints to Support CIFS](#)

#### Upgrading the Kernel in DMP 4300G and 4305G Endpoints to Support CIFS

DMP 4300G and DMP 4305G endpoints that use an older kernel version cannot use the CIFS protocol that Cisco DMS 5.1 supports. You must upgrade the kernel on these DMPs before you can use CIFS. It is not necessary to upgrade the kernel on a DMP 4400G, because the necessary kernel version already is installed.

Installable kernel files are stored on the software CD that you received from Cisco after you:

- Purchased DMM-DSM 5.1.
- Paid to upgrade from an earlier release.
- Contacted Cisco TAC to verify a SAS contract that applies to DMM-DSM.
- Contacted Cisco TAC to verify a SAS contract that applies to your DMPs.

**Note** These files are not available for download from Cisco.com.

- For DMP 4300G endpoints, the kernel is DMPkernel\_A1\_4300.tivella
- For DMP 4305G endpoints, the kernel is DMPkernel\_A1\_4305.tivella

#### Procedure

	Task	Steps
Step 1	Check each DMP to see which kernel version is installed.	<ol style="list-style-type: none"> <li>Load this URL in your browser: <b>http://&lt;DMP_IP_address&gt;:7777/get_param?p=sinfo.version</b></li> <li>Enter the username and password for the DMP web account.</li> <li>Read the <i>sinfo.version</i> output that your DMP returns. Its time stamp should be exactly: <b>Tue Nov 18 14:48:57 EST 2008</b></li> </ol> <p>If the time stamp is any earlier than is shown here, the kernel is outdated and you must install the updated kernel on this DMP before it will support the CIFS protocol.</p>
Step 2	Add the kernel to your media library.	<ol style="list-style-type: none"> <li>Locate your upgrade CD for this DMP model type. Its silk-screened label says one of the following: <ul style="list-style-type: none"> <li>• Cisco Digital Media Player Software Upgrade for 4300G Version 5.1</li> <li>• Cisco Digital Media Player Software Upgrade for 4305G Version 5.1</li> </ul> </li> <li>Locate the kernel file on the CD. Its filename is one of these: <ul style="list-style-type: none"> <li>• DMPkernel_A1_4300.tivella</li> <li>• DMPkernel_A1_4305.tivella</li> </ul> </li> <li>Add the kernel to your media library.</li> </ol>
Step 3	Install the new kernel on each DMP.

#### About the Built-in Mechanism for Content Distribution, DMS-CD

Activation Anyone who has purchased a valid license to use this release of DMM-DSM also has a perpetual license to use its built-in implementation of DMS-CD. No additional software is required and there is no recurring cost.

**Note** • We recommend that you avoid using any value greater than 100, which is the factory-default value, in the "Number of concurrent deployments" field. Using a value greater than 100 can increase the number of concurrent DMS-CD sessions to DMPs and increase the load on your DMM appliance. You might try reducing this value if you notice that the CPU load is high on your DMM appliance during DMS-CD deployments. In our tests, we found that DMM appliances operate at expected levels while running 75 concurrent DMS-CD sessions. This metric might differ in your WAN, depending on total bandwidth capacity and the value you use in the "Enable maximum transfer rate" field. To understand these fields, see [Table 3-28](#).

- This DMS-CD release does not support live video. It provisions assets that already exist.
- This DMS-CD release does not support desktop video. It provisions assets to DMPs.
- This DMS-CD release does not delete files from any DMP that belongs to multiple DMP groups. For autocleaning to occur on a DMP, it can belong to one DMP group only. Alternatively, you can use Play Now to deploy a job to DMPs.

- You can attach only one external USB flash drive or external USB hard drive to a DMP. We do not support USB hubs or any other method that you might use to attach multiple drives (or other device types) to a DMP.

Cisco DMS content distribution (DMS-CD) is a file delivery and management mechanism that conserves network bandwidth and optimizes playback performance by provisioning creative assets directly to your DMPs. With DMS-CD, you can use FTP or SFTP to transfer multiple playlists and presentations to DMP local memory, storing their assets directly on the flash memory card that is preinstalled inside a DMP and — or alternatively — on an external USB hard drive or flash drive that you attach to a DMP.

DMS-CD is designed for use in WANs with as many as 1,000 sites that each have a maximum of three DMPs delivering digital media to their attached DMP displays. Within these parameters, you can provision up to 300 MB of new data to each DMP every day, depending on the bandwidth capacity of your WAN.

Differential download intelligence in DMS-CD prevents the needless provisioning of any asset more than once to any DMP that uses it and already has downloaded it, even if you have used the asset repeatedly in multiple playlists or presentations. Your DMPs retain their valid assets and download only what is new or has changed.

A systemwide threshold that you define limits in your WAN how much bandwidth is used per session when DMS-CD provisions assets to one of your DMPs. For example, a limit of 1.2 mbits means that file transfer speeds for DMS-CD deployments cannot exceed the maximum threshold of 1.2 mbits per DMP. Thus, if your deployment provisions assets to 20 DMPs, the maximum WAN bandwidth that DMS-CD uses is 24 mbits, because  $20 \times 1.2 = 24$ .

If the deployment package is interrupted while you are provisioning assets (due to a power failure or a network outage, for example), the file transfer process resumes automatically after the interval has elapsed that you specified in the "Deployment retry time (in seconds)" field. Similarly, the maximum number of times that DMS-CD tries to provision assets for an interrupted deployment package is constrained by the "Deployment retry count" value. You define these values at Deployment Manager > Deployment Preferences. If your deployment is scheduled to recur daily, as we recommend, DMS-CD will resume the transfer each day of any assets which were too large to transfer completely during the previous 24-hour period, as would be the case for a file that is 1.6 GB if none of your DMPs can download more than 200 MB in a single day. This feature is useful in cases where you must compensate for bandwidth throttling or other constraints, such as a limited number of nighttime hours when deployments are certain not to disrupt the digital signage messages or Enterprise TV programs that your organization shows to its targeted audiences.

Because DMS-CD uses the same scheduling features that are built into DMM-DSM, you can schedule assets to be provisioned late at night or at other convenient, planned times. Furthermore, reporting features in DMM-DSM show you which DMS-CD deployments have succeeded or failed and show you which files were deployed to each DMP.

### Best Practices for Limiting the Risk of Disrupted DMP 4400G Performance

Improper scheduling practices and improper WAN bandwidth parameters in your digital media network can cause DMS-CD to disrupt playback performance temporarily on your DMP 4400G endpoints. The disruption affects multicast video streams, HD videos, Shockwave Flash animations, and image assets that these DMPs show on their attached DMP displays while simultaneously downloading newly provisioned, large assets. When this disruption happens:

- Videos might become fragmented (contain artifacts), drop frames, or cut out during playback.
- Flash animations might play slowly.
- Images might redraw slowly.
- DMPs might restart unexpectedly, in rare instances.

These behaviors affect the DMP 4400G due to a hardware resource limitation. However, you can configure bandwidth restrictions in your WAN that should help to alleviate these symptoms or eliminate them completely, depending on the system load of each DMP. We recommend that you apply these best practices in your network:

- If playback and deployments must occur simultaneously, use the "Enable maximum transfer rate" field (at Digital Media Players > Deployment Manager > Deployment Preferences) to configure an upper threshold for bandwidth consumption by DMS-CD during its deployments to each individual DMP in your WAN. The value that you enter should be *less than* the maximum transfer rate of your network. If necessary, adjust and test values until you determine exactly how much bandwidth DMS-CD can use in your WAN without affecting DMP performance. In our tests, we found that using 5 Mbps as the upper threshold provided adequate bandwidth restriction in most cases; however, this is not necessarily a value that you should use. Results will vary depending on network capacity and the load placed on a DMP.
- Whenever possible, schedule DMS-CD deployments to run while there is little or no load on your DMPs, such as during the "off hours" at each store or branch site, when no playback is scheduled. If you schedule deployments and playback to run in parallel, your deployments might take longer to finish than you anticipate. This delay is predictable because the load is doubled on DMP system resources. In this case, deployments might be slow even when you have not imposed any bandwidth restrictions upon DMS-CD.
- Schedule your DMS-CD deployments to run during hours that have the least possible impact on your audience. For example, you might run deployments late at night or early in the morning if this is when your audience is smallest.
- We recommend that you create no more than one DMS-CD deployment package for each of your DMP groups whose member DMPs should play assets that are stored locally. You can schedule this deployment to recur each day at the least disruptive time and you can add, edit, or delete entries whenever necessary in the playlists, presentations, and commands that are part of the deployment package. DMS-CD will sync DMP storage with the current version of this deployment package and apply any changes automatically without additional user intervention, preventing your DMPs from keeping local copies of obsolete assets long after you obsolete them. Also, this method increases the likelihood that large deployments will resume and be completed successfully on a slow connection. Furthermore, this method prevents DMS-CD deployments from becoming so numerous that they are difficult to manage.

### Checking Disk Space Capacity for Deployments

#### Before You Begin

- Create DMP groups and populate them with DMPs.

#### Procedure

Step 1 Choose Digital Media Players > DMP Manager.

Step 2 Click in the DMP Groups object selector the name of the DMP group that contains the target DMP.

The DMP List table is repopulated with the corresponding group membership list.

Step 3 (Optional) Use filtering options above the DMP List table to limit how many DMPs the table describes.

Step 4 Add together the values that you see in the Internal Storage MB. (Total/Free) column and the Internal Storage MB. (Total/Free) column. The combination of these values is the total free capacity.

Step 5 Compare the total free capacity to the expected size of your deployment package.

- If the total free capacity is sufficient, provision the assets in a deployment package, as planned.
- If the total free capacity is not sufficient, do one of the following:
  - Reduce the size of the deployment package.
  - Delete unused or unimportant assets from the DMP.
  - Attach one external USB drive to the DMP if you have not attached one already.
  - Replace the external USB drive with one that has greater capacity.

Related Topics

- [Adding and Editing DMP Groups, and Autoregistering DMPs to Populate Them](#)

Configuring DMS-CD Deployment Threshold Preferences

Note • Given the default Retry Count value of 5, and the default Retry Timeout duration of 300 seconds, you can expect that DMS-CD will take as long as 1,500 seconds (25 minutes) by default to detect content or determine that a DMP is unreachable and give up. If this is too long, you might try changing the Retry Timeout value from 300 to 30.

- Most DMS-CD deployment preference settings that you define take effect during the next scheduled DMS-CD deployment. However, any time that you change the "Number of concurrent deployments" value, you must restart your DMM appliance *and* run a scheduled DMS-CD deployment before the changed setting takes effect on your DMPs.

Procedure

Step 1 Choose Digital Media Players > Deployment Manager > Preferences.

Step 2 Define the DMS-CD thresholds that should be applied by default in the future, when you transfer deployment packages:

- a. Enter or edit the requested values.
- b. Choose the file transfer protocol, FTP or SFTP.
- c. Enable or disable a maximum transfer rate.

Tip Changes to the maximum transfer rate will have no effect on deployments that are running already. They are applied to deployments that start after you save your changes.

Step 3 Click Update to save your work and put it into effect. Alternatively, click Cancel to discard your work and restore the previous entries.

UI Reference: Elements to Define Deployment Thresholds

Navigation Path

Digital Media Players > Deployment Manager > Preferences

Table 3-28 Elements to Configure DMS-CD Deployment Thresholds

Element	Icon and Description

Number of concurrent deployments	<p><b>Note</b> Any time that you change this value, you must restart your DMM appliance before the changed setting takes effect on your DMPs.</p> <p>The maximum number of FTP or SFTP threads (sessions) that are allowed to run concurrently when DMS-CD provisions assets to a DMP.</p> <p>The permitted value is any whole number in the range from 1 to 1000. The factory-default value is 100 threads.</p>
Deployment time limit per file (in minutes)	<p>The count of how many seconds will be allowed to elapse after a DMS-CD deployment package begins to provision any file, before the file that reached this threshold is moved to the back of the queue and its transfer is deferred.</p> <p>The next file advances to the front of the queue and the deployment continues. DMS-CD applies this threshold to a deployment package as many times as necessary until it has cycled through all of its files, and then the transfer is resumed for the deferred file after it returns to the front of the queue. This threshold might cause the transfer of any especially large file to be distributed across days. Bottlenecks are prevented and as many assets are provisioned as can be provisioned.</p> <p>The permitted value is any whole number in the range from 1 to 10080, where 10,080 minutes is the same as 168 hours or 7 days. The factory-default value is 1440 minutes.</p>
Deployment retry count	<p>The count of how many times DMS-CD should try again to restart a failed deployment, until DMS-CD stops trying.</p> <p>The permitted value is any whole number in the range from 1 to 100. The default value is 5 retries.</p>
Enable maximum transfer rate	<p>The upper threshold allowed for bandwidth consumption by DMS-CD during its deployments to each DMP in your WAN, as measured in kilobits per second (Kbps). The value that you enter should be less than the maximum transfer rate of your network.</p> <p>The permitted value is any whole number in the range from 28 to 102400, where 102400 Kbps is the same as 100 Mbps. The factory-default setting is that use of the maximum transfer rate is disabled.</p>
Deployment Protocol	<p>FTP or SFTP.</p> <p>If you choose SFTP, connections are encrypted between your DMM server and your DMPs. Otherwise, these sessions use clear text. The factory-default setting is FTP.</p>
Maximum file size (in MB)	<p>The maximum number of megabytes — per file — that DMS-CD will transport inside a multifile deployment package to your DMPs, before the file that reached this threshold is moved to the back of the queue and its transfer is deferred.</p> <p>The next file advances to the front of the queue and the deployment continues. DMS-CD applies this threshold to a deployment package as many times as necessary until it has cycled through all of its files, and then the transfer is resumed for the deferred file after it returns to the front of the queue. This threshold might cause the transfer of any especially large file to be distributed across days. Bottlenecks are prevented and as many assets are provisioned as can be provisioned.</p> <p>The permitted value is any whole number in the range from 10 to 1024000, where 1,024,000 MB is the same as 1 TB. The factory-default maximum size is 600 MB.</p> <p><b>Note</b> Although it is technically feasible to enter a file size as great as 1024000 MB, playback fails for any file that is larger than 1.9 GB, regardless of the DMP model type. This size is constrained by the limits of streaming.</p>
Deployment retry time (in seconds)	<p>The count of how many seconds must elapse before DMS-CD tries again to transfer a deployment package to a DMP on which the transfer failed or was interrupted. DMS-CD will never try to resume an interrupted or failed transfer until at least this many seconds have elapsed.</p> <p>The permitted value is any whole number in the range from 5 to 10800, where 10800 is equal to 3 hours. The factory-default value is 300 seconds.</p>

##### Before You Begin

- Configure download threshold preferences for DMS-CD.
- Check the free disk space on your DMPs for storing provisioned assets.

##### Procedure

---

Step 1 Choose Digital Media Players > Advanced Tasks.

Step 2 Choose Deployment Package from the Application Types list.

Step 3 Click  Add New Application.

Step 4 Enter a name and description for this deployment package.

Step 5 Choose the mount point for this deployment. You can choose only one:

- Flash Storage is the flash memory card installed inside a DMP, also known as usb\_1.
- USB is the one external USB hard drive that is attached to a DMP, also known as usb\_2.

---

Note To learn which external USB drives we support and have tested, see *Cisco Digital Media System Compatibility Information* on Cisco.com: [http://www.cisco.com/en/US/products/ps6681/products\\_device\\_support\\_tables\\_list.html](http://www.cisco.com/en/US/products/ps6681/products_device_support_tables_list.html).

---

Step 6 Check the Emergency/Alarm check box if this job consists of assets for an emergency notification. Otherwise, uncheck it.

Step 7 Populate and save the deployment package.

- a. Click the name of an applications category in the Applications list.
- b. Choose one or more applications from the Available Applications list, and then click Select Applications.
- c. (Optional) Reorder the Selected Applications list.
- d. Click Submit.

Step 8 Use the Play in Future feature to schedule deployment of this package to your DMPs that should receive it, and then wait for the file transfer to finish.

---

Note DMS-CD does not prevent you from using the Actions list or the Play Now feature to start transferring a DMS-CD deployment package immediately. However, using either of these methods defeats many of the most important benefits of using DMS-CD. We recommend instead that you use the Play in Future feature to schedule all of your DMS-CD deployment packages.

---

Bandwidth capacity in your WAN determines how long you must wait for the deployment to finish. After it is finished, DMM-DSM autogenerates the (Go To) URL action for this deployment package.

Step 9 Choose Digital Signage > Digital Media Players > Advanced Task > (Go to) URL.

Step 10 Check that a (Go to) URL action was autogenerated, which adds the prefix LOCAL to the name that you entered in [Step 4](#).

Step 11 Deploy this autogenerated (Go to) URL action.

- Use the Actions list to deploy immediately.
- Use the Play now feature to deploy immediately.
- Use the Play in Future feature to schedule a future deployment.

If you use Play in Future, the scheduled start and stop times are derived from the clock in your DMM appliance.

---

Note You cannot use the Deployment Status feature (at Digital Media Players > Deployment Manager > Deployment Status) to check the progress or status of immediate deployments.

---

## Editing a DMS-CD Deployment Package

### Before You Begin

- Configure download threshold preferences for DMS-CD.
- Check the free disk space on your DMPs for storing provisioned assets.
- Create at least one DMS-CD deployment package.

### Procedure

Step 1 Choose **Digital Media Players > Advanced Tasks**.

Step 2 Choose **Deployment Package** from the Application Types list.

Step 3 Click the name of the deployment package to be edited.

Step 4 Click **Edit Application**.

Step 5 (Optional) Edit the name or description for this deployment package.

Step 6 (Optional) Change the mount point for this deployment. You can choose only one:

- **Flash Storage** is the flash memory card installed inside a DMP, also known as usb\_1.
- **USB** is the one external USB hard drive that is attached to a DMP, also known as usb\_2.

**Note** To learn which external USB drives we support and have tested, see *Cisco Digital Media System Compatibility Information* on Cisco.com: [http://www.cisco.com/en/US/products/ps6681/products\\_device\\_support\\_tables\\_list.html](http://www.cisco.com/en/US/products/ps6681/products_device_support_tables_list.html).

Step 7 (Optional) Check the **Emergency/Alarm** check box if this job consists of assets for an emergency notification. Otherwise, uncheck it.

Step 8 (Optional) Repopulate and save the deployment package.

- Click the name of an applications category in the Applications list.
- Choose one or more applications from the Available Applications list, and then click **Select Applications**.
- (Optional) Reorder the Selected Applications list.
- Click **Submit**.

Step 9 Use the **Play in Future** feature to schedule deployment of this package to your DMPs that should receive it, and then wait for the file transfer to finish.

**Note** DMS-CD does not prevent you from using the Actions list or the Play Now feature to start transferring a DMS-CD deployment package immediately. However, using either of these methods defeats many of the most important benefits of using DMS-CD. We recommend instead that you use the Play in Future feature to schedule all of your DMS-CD deployment packages.

Bandwidth capacity in your WAN determines how long you must wait for the deployment to finish. After it is finished, DMM-DSM autogenerates the (Go To) URL action for this deployment package.

Step 10 Choose **Digital Signage > Digital Media Players > Advanced Task > (Go to) URL**.

Step 11 Check that a (Go to) URL action was autogenerated, which adds the prefix LOCAL to the name that you entered or edited in [Step 5](#).

Step 12 Deploy this autogenerated (Go to) URL action.

- Use the Actions list to deploy immediately.
- Use the Play now feature to deploy immediately.
- Use the Play in Future feature to schedule a future deployment.

If you use Play in Future, the scheduled start and stop times are derived from the clock in your DMM appliance.

---

Note You cannot use the Deployment Status feature (at Digital Media Players > Deployment Manager > Deployment Status) to check the progress or status of immediate deployments.

---

#### Deleting a DMS-CD Deployment Package

##### Before You Begin

- You must have saved at least one DMS-CD deployment package.
- Use the Reports feature (at Schedules > Reports) to search your schedule for any instances of the deployment package that you will delete. If you find one or more scheduled instances of it, remove those deployments from your schedule.

##### Procedure

---

Step 1 Choose Digital Media Players > Advanced Tasks.

Step 2 Choose Deployment Package from the Application Types list.

Step 3 Click the name of the action to be deleted, click

Delete Application, and then click Submit.

Step 4 Choose (Go to) URL from the Application Types list.

Step 5 Click the name of the action to be deleted, click

Delete Application, and then click Submit.

---

#### Related Topics

- [Checking Appliance System Logs for DMS-CD Deployment Errors](#)
- [Using Snapshot Mode or Live Monitor Mode to Check for DMS-CD Deployment Errors](#)

#### Viewing Status Details for DMS-CD Deployments

Tip Values in the Timestamp column always signify one of these:

- When you clicked Publish All to provision the described deployment package.
  - When the described deployment succeeded.
  - When the described deployment failed
- 

##### Procedure

---

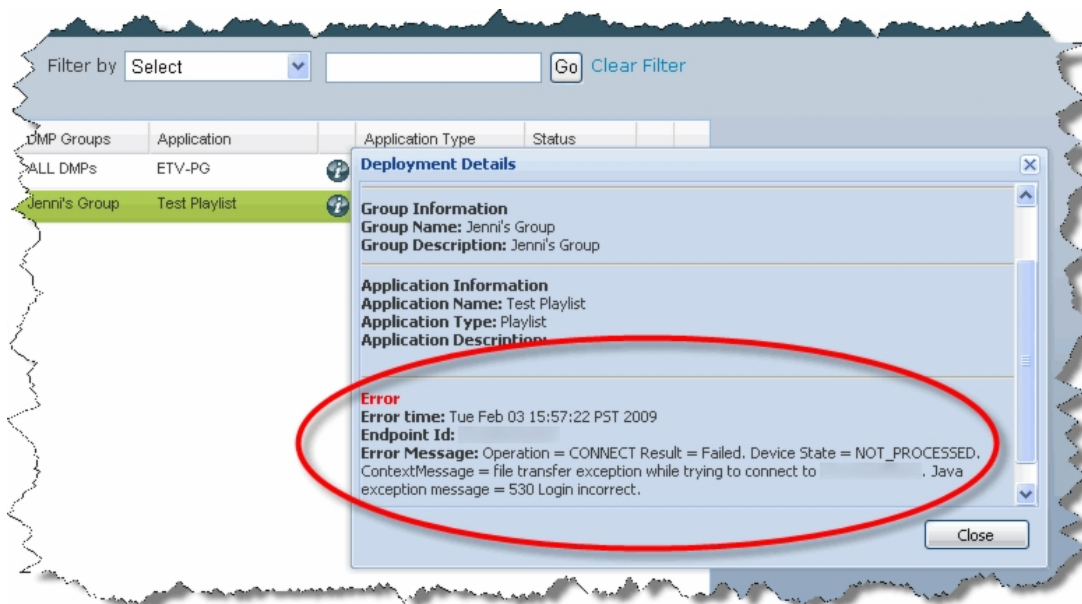

Step 1 Choose Digital Signage > Digital Media Players > Deployment Manager > Deployment Status.

Step 2 (Optional) Use filtering options above the table to limit how many deployment packages the table describes.

Step 3 If the Status column shows a value of Failed for the deployment package whose status you are checking, click the corresponding  icon in the far right column.

Step 4 Scroll through the Deployment Details popup window (see [Figure 3-7](#)) until you see an error message that might help you to troubleshoot the failure. For example, an error message might say that DMP login credentials were incorrect.

Figure 3-7 Deployment Details

#### Related Topics

- [Methods to Monitor and Troubleshoot DMS-CD Deployments](#)

#### Checking Appliance System Logs for DMS-CD Deployment Errors

##### Procedure

Step 1 Log in to AAI on your DMM appliance.

Step 2 Choose DMM\_CONTROL > DMM\_LOG\_LEVEL > DEBUG, to ensure that the logs are verbose.

Step 3 Choose APPLIANCE\_CONTROL > GET\_SYSLOG, and then choose the method to receive the system logfiles.

Step 4 Search through the IFMS.log and catalina.out logfiles for messages about:

- DMS-CD deployment events
- DMP deployment events
- Application deployment events (where "application" is another word for "package")
- File management events
- Error events
- Debug logs

These are the detected and reported error conditions that DMS-CD logging captures:

- DMS-CD cannot retrieve a file.
- DMS-CD cannot provision a file (DMP out of space or missing USB)
- DMP is not reachable (is down, or has wrong IP)
- Deployment was interrupted (network outage, DMM down, etc.)
- Deployment was not completed during its window

---

#### Related Topics

- [Methods to Monitor and Troubleshoot DMS-CD Deployments](#)

#### Using Snapshot Mode or Live Monitor Mode to Check for DMS-CD Deployment Errors

##### Procedure

---

Step 1 Choose Administration > Alerts > Alert Reports.

Step 2 Do one of the following:

- Click Live Monitor Mode and choose an option from the Type list.

Live monitor mode describes the most recent 100 instances of an event type that you choose, and its data is refreshed automatically every 90 seconds.

- Click Snapshot Mode, choose the start and stop dates and times, and choose an option from the Type list.

Snapshot mode describes only the events that match the combination of all parameters that you choose.

Step 3 Click Apply.

**Note** These options from the Type list cause the filtered report to describe only the DMS-CD deployments that failed or succeeded:

- Deployment Failures
- Deployment Successes

These options from the Type list cause the filtered report to describe only the events that DMPs reported, some of which might pertain to disrupted or failed deployments with DMS-CD:

- DMP Outages
- DMP Restarts
- DMP IP Conflicts

When you choose the All Internal Events option from the Type list, these event types also pertain to deployments:

- Deployment error
- Deployment started
- Deployment ended

#### Using Advanced Tasks

Many advanced tasks and options are available to you in DMM-DSM. Your expectations and goals for your digital signage network determine which tasks and options are relevant to you at any particular time or for any particular purpose.

##### Procedure

---

Step 1 Select Digital Media Players > Advanced Tasks, and then click an application name in the Application Types list, as follows:

Application Type	Purpose
(Go to) URL	Load media from a web server into TVzilla, the embedded browser on a DMP. See the " <a href="#">Go to) URL</a> " section.
DMP Audio/Video Settings	Adjust the audio and video signals that DMPs send to their attached DMP displays. See the " <a href="#">DMP Audio/Video Settings</a> " section.

DMP Discovery	Autoregister the DMPs in a network range that you specify and add those DMPs to DMM-DSM for centralized management. See the " <a href="#">DMP Discovery</a> " section.
DMP Display Controls	Bind together a group of RS232 instructions that you can use to remotely configure display settings on some Cisco, NEC, and DMTech display models when displays of these types are attached to your DMPs. See the " <a href="#">DMP Display Controls</a> " section.
DMP Failover Retry	Set the DMP Recovery URL value and the Recovery Timeout value. See the " <a href="#">DMP Failover Retry</a> " section.
DMP Firmware Upgrade	Choose firmware upgrades and patches to send to one or more DMPs. See the " <a href="#">DMP Firmware Upgrade</a> " section.
DMP Startup URL	Configure DMPs to load a particular HTTP URL when you start or restart them. See the " <a href="#">DMP Startup URL</a> " section.
Deployment Package	Configure a DMS-CD deployment to DMP local storage.
File Transfer to DMP or Server	<p>Tip We recommend that you use DMS-CD instead of this deprecated, legacy feature, which deletes anything that you saved previously to the flash memory card inside your DMP, and is unable to transfer assets to any external USB drives that you might have attached to your DMPs.</p> <p>Use HTTP pulling, use FTP to transfer to your DMPs, or use FTP to transfer to your FTP servers (external deployment servers), the:</p> <ul style="list-style-type: none"> <li>Assets from presentations that you prepared in Digital Media Designer.</li> <li>Commands and settings from advanced tasks that you selected or configured under the Digital Media Players tab.</li> </ul> <p>See the "<a href="#">File Transfer to DMP or Server</a>" section.</p>
System Tasks	Select an administrative command to send to one or more DMPs. See the " <a href="#">System Tasks</a> " section.

**Step 2** (Optional) If you previously defined or configured options for the relevant application and you saved your selections, click any row in the Applications table to select one of the operations that you defined; the row that you click should be one that you want to edit, deploy to DMPs, or delete.

**Step 3** Do one of the following:

- To define or configure options for a new operation, click  Add New Application.

- To edit the options that you previously defined or configured for the operation that you selected in [Step 2](#), click  Edit Application.

- To delete the operation that you selected in [Step 2](#), click  Delete Application.

**Step 4** If you clicked  Add New Application or  Edit Application, the page is refreshed and you can select options or enter values that define or redefine the behavior for this operation.

**Step 5** To save your selections, click **Submit**. Otherwise, click **Cancel** to discard your selections.

**Step 6** To deploy to your DMPs the commands that you saved in [Step 5](#), see [Scheduling Time Slots for Media and Events on DMPs](#).

Navigation Path

Digital Media Players > Advanced Tasks

Table 3-29 Understanding and Using Advanced Tasks

Application Name	Description, Icons, and Options
<a href="#">(Go to) URL</a>	
<i>Load media from a web server into TVzilla, the embedded DMP browser.</i>	
Name	A unique and human-readable name for the website that you will select to show in this task. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.
URL	The full and correct HTTP URL that points to a page or file on a webserver. The URL that you enter should point to a page that is dynamic and does not require any human interaction (such as clicking or scrolling) to be useful or interesting. You must enter a URL.
<a href="#">DMP Audio/Video Settings</a>	
<i>Adjust the audio and video signals that DMPs send to their attached DMP displays.</i>	
Name	A unique and human-readable name for the settings that you configure in this task. For example, you might adjust the brightness setting to accommodate a locale where the lighting is dim, and then enter a name that identifies that kind of locale. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.

Brightness	The setting that compensates for any deficiencies in the on-screen brightness of your DMP displays. Brightness compensation values can range from -128 to 127.
Contrast	The setting that compensates for any deficiencies in the on-screen contrast of your DMP displays. Contrast compensation values can range from 0 to 255. The default is 128.
Saturation	The setting that compensates for any deficiencies in the on-screen color saturation of your DMP displays. Saturation compensation values can range from 0 to 255. The default is 128.
Left Audio Channel Volume	The setting to control how loudly or softly your DMP display speakers play sound in the left audio channel. Volume can range from 0 to 100, where 0 is silent. The default is 50.
Right Audio Channel Volume	The setting to control how loudly or softly your DMP display speakers play sound in the left audio channel. Volume can range from 0 to 100, where 0 is silent. The default is 50.
DMP Discovery	
<p>Autoregister the DMPs in a network range that you specify and add those DMPs to DMM-DSM for centralized management. For autoregistration and centralized management to succeed:</p> <ul style="list-style-type: none"> <li>Your firewall must allow DMM-DSM and your DMPs to communicate over TCP port 7777 and must also allow ICMP (ping) traffic on this port.</li> <li>In DMPDM, you must enable the Enable Cisco TAC Troubleshooting Access option. Alternatively, see <a href="#">Enabling and Disabling Troubleshooting Access on DMPs</a>.</li> </ul> <p>To learn about other autoregistration options for the DMPs in your digital signage network, see <a href="#">Adding and Editing DMP Groups, and Autoregistering DMPs to Populate Them</a>.</p> <p><b>Note</b> DMP autoregistration operations occur in sequence and cannot overlap. You should not schedule multiple DMP autoregistration operations that overlap or run simultaneously. If you do, only the first such operation will run and DMM-DSM will not show any error message to explain why the other autoregistration operations failed to find any DMPs. If you must run autoregistration tasks that search different subnets, schedule a 35-minute interval between the start time for one autoregistration and the start time for the next autoregistration.</p>	
Name	A unique and human-readable name for this autoregistration IP address range task. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.
Discovery IP Range	The NMAP syntax to describe one or multiple ranges of IP addresses.
DMP Display Controls	
<p>Bind together a group of RS-232 instructions that you can use to remotely configure display settings.</p> <p><b>Note</b> Before you can use this feature, you must enable RS-232 support for your displays. Select <b>Digital Media Players &gt; Advanced Tasks &gt; System Tasks</b>; then, name, save, and deploy one of these as the correct option for your display type:</p> <ul style="list-style-type: none"> <li>RS-232: Control DMTEch displays.</li> <li>RS-232: Control supported, non-DMTEch displays.</li> </ul> <p><b>Tip</b> To learn about the RS-232 commands that manage Cisco LCD displays, see <a href="#">Using RS-232 Commands to Manage Cisco LCD Professional Series Displays</a>.</p>	
TV Type	Choose the manufacturer and the model type: <ul style="list-style-type: none"> <li>CISCO_40N</li> <li>CISCO_52S</li> <li>DMTECH</li> <li>NEC_3210</li> <li>NEC_4010</li> <li>NEC_4610</li> <li>NEC_5710</li> </ul>
Contrast	Choose or enter a contrast value from 0 to 100.
Brightness	Choose or enter a brightness value from 0 to 100.
Sharpness	Choose or enter a sharpness value from 0 to 100.
Color	Choose or enter a color value from 0 to 100.
Tint	Choose or enter a tint value from 0 to 100.

TV Channel	Choose or enter the analog television signal frequency for a channel from 0 to 99.
Audio Volume	Choose or enter a volume level from 0 to 100.
Mute	Choose whether to mute the display. <ul style="list-style-type: none"> <li>• on</li> <li>• off</li> </ul>
Input	Select the input type. Options differ, according to your selection from the TV Type list. <ul style="list-style-type: none"> <li>• TV</li> <li>• RGB</li> <li>• RGB1 (DVI-D)</li> <li>• RGB2 (D-SUB)</li> <li>• RGB3 (BNC)</li> <li>• DVD/HD</li> <li>• Video (Composite)</li> <li>• Video 1</li> <li>• Video 2</li> <li>• Video 3</li> <li>• S-Video</li> <li>• None (DVD)</li> <li>• Component</li> <li>• PC</li> <li>• HDMI</li> <li>• None (DVBT)</li> </ul>
Power	Choose whether the television should be turned on. <ul style="list-style-type: none"> <li>• on</li> <li>• off</li> </ul>
<b>DMP Failover Retry</b>	
<i>Configure the recovery URL to use in case of failover and the interval between attempts to reload that URL if the connection to it is disrupted.</i>	
Name	A unique and human-readable name for the DMP failover retry task that you are configuring. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.
Recovery URL	The URL to show immediately on a DMP display after its attached DMP restarts for any reason, unless other content is scheduled to be shown. If this value is blank, your DMP will reuse the most recent URL that failed to load.
Recovery Timeout (in seconds)	The maximum number of seconds that your DMP will wait for a response from the server that you identify in the Recovery URL field before it tries again to reach that server. There is no maximum number of retry attempts.
<b>DMP Firmware Upgrade</b>	
 <p><b>Caution</b> Before you install an upgrade, you must run the "Stop All Applications" system task on all the affected DMPs. To do so, click the <b>Schedules</b> tab, select the DMP group that you will upgrade, select <b>Stop All Applications</b> from the Actions list, and then click <b>Go</b>.</p> <p><b>Note</b> Before you upgrade a DMP, you must enable troubleshooting access to it. Later, to restore DMP security after the file transfer is finished, you must disable troubleshooting access. See <a href="#">Enabling and Disabling Troubleshooting Access on DMPs</a></p> <p>Send a firmware image or kernel file from your media library to a DMP and command the DMP to install it.</p>	

Name	A unique and human-readable name for the upgrade task that you are configuring. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.
Is Kernel Upgrade?	A check box that you use to distinguish firmware upgrades from kernel upgrades.
Media Categories	<p>An object selector that lists all the categories in your media library. From the object selector, click the one category that the Available Content table should describe. To learn more about categories, see <a href="#">Working with Assets and Categories in Your Media Library</a>.</p> <ul style="list-style-type: none"> <li>•  Opened Media Library — Shows all the categories in your media library until you click to hide them.</li> <li>•  Closed Media Library — Hides the list of categories until you click to show them.</li> <li>•  Content Category — A media library category that you created.</li> </ul>
Available Content	<p>Click a row to choose an asset in the category. Its attributes are:</p> <ul style="list-style-type: none"> <li>• Name — A unique and human-readable name that you entered.</li> <li>• Source — Says whether the asset is a file (F) or an HTTP URL (U).</li> <li>• Data Type — Identifies the type of asset.</li> <li>• Size — The file size in bytes.</li> <li>• Path — The full pathname that points to the file on the DMP.</li> <li>• Description — A brief description. The description is optional.</li> <li>• Upload Started — Time stamp (in the format YYYY-MM-DD hh:mm:ss.ms) that says when you started to upload the file.</li> <li>• Upload Finished — Time stamp (in the format YYYY-MM-DD hh:mm:ss.ms) that says when the file was completely uploaded.</li> <li>• Status — Says whether a DMP is reachable. A green icon (✓) tells you that the DMP is connected to a power source, uses a known IP address, and is reachable. A red icon (✗) tells you that the DMP is unreachable.</li> </ul>
DMP Startup URL	
<p><i>Causes DMPs to load and show media that you specify, immediately after every restart.</i></p> <p><b>Tip</b> We recommend that you enter a value for either the Video URL or the Browser URL. If both values are blank, you might find that your DMP sometimes loses its ability to play even the Shockwave Flash files that it has played successfully in the past.</p>	
Name	A unique and human-readable name for the startup URL task that you are configuring. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.
Video URL	<p>The HTTP URL (or local path on the DMP) that points to an encoded digital video file that a DMP should load automatically and show immediately after every restart. We do not support any use of spaces in filenames or URLs. The supported transport protocols and URL types are:</p> <ul style="list-style-type: none"> <li>• <code>http://&lt;ip_address&gt;/&lt;path_and_filename&gt;</code></li> <li>• <code>udp://&lt;ip_address_of_multicast_server&gt;/&lt;port_number&gt;</code></li> </ul>
Browser URL	The HTTP URL of any document that TVzilla, the embedded browser on a DMP, should load automatically and show immediately after each restart. We do not support any use of spaces in URLs. We recommend that you do not point to any document or site that requires human interaction to be useful, interesting, or entertaining, because there is no keyboard or mouse that you can use to interact with what you show on a DMP display.
Reboot Necessary?	Check the check box if a DMP should restart immediately when it receives this instruction. Uncheck the check box if no immediate restart is required.
Deployment Package	
<p><i>Configure a DMS-CD deployment to DMP local storage.</i></p>	

Name	A unique and human-readable name for the deployment task that you are configuring for DMS-CD. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.
Mount Point	Choose whether the assets should be provisioned to the flash memory card inside the DMP (usb_1) or to the one external USB drive that you attached to the DMP (usb_2).  <i>Tip</i> To learn which external USB drives we support and have tested, see <i>Cisco Digital Media System Compatibility Information</i> on Cisco.com: <a href="http://www.cisco.com/en/US/products/ps6681/products_device_support_tables_list.html">http://www.cisco.com/en/US/products/ps6681/products_device_support_tables_list.html</a> .
Emergency/Alarm	Check (tick) this box if the transferred files will be used during emergencies. Otherwise, do not check this box. Assets for emergencies are saved to a special partition
Application Types	The list of categories for advanced tasks. Click a category to see its tasks.
Available Applications	Advanced tasks in the category that you clicked. Click anywhere in a row to select the corresponding task.  <ul style="list-style-type: none"> <li> <b>Select Applications</b> — Moves from the Available Applications table to the Selected Applications table the tasks that you selected.</li> <li><b>Name</b> — The unique and human-readable name that identifies a particular task.</li> <li><b>Description</b> — A brief description. The description is optional.</li> </ul>
Selected Applications	Advanced tasks that you selected from the Available Applications table, so that you could include them in the file transfer operation that you are configuring. Click a file transfer task to select its assets for deployment.  <ul style="list-style-type: none"> <li> <b>Move Selected Item Up/Down</b> — Reorders the list so that the highlighted item moves up (or down) one row, exchanging places with the item that was above it (or below it).</li> <li> <b>Delete Selected Item</b> — Moves from the Selected Applications table to the Available Applications table the applications that you selected.</li> <li> <b>Zoom In/Out</b> — Shows only the Selected Applications table, hiding the Available Applications table. Alternatively, shows the Selected Applications table and the Available Applications table simultaneously.</li> </ul>

File Transfer to DMP or Server

**Caution** Before you use a file transfer application to deploy the assets from a new or updated presentation to any of your DMPs, you must first run the "Stop All Applications" system task on each affected DMP. To do so, click the **Schedules** tab, select the DMP group that will use the presentation, select **Stop All Applications** from the Actions list, and then click **Go**.

Use HTTP pulling or FTP to transfer to particular DMPs or to external (FTP) deployment servers the assets from presentations that you prepared in DMD, the media and electronic program guides for Enterprise TV, or the commands and settings from advanced tasks. (Although it is technically possible, it is not useful to transfer a system task, a (Go to) URL task, or a startup URL task.) See [Scheduling Time Slots for Media and Events on DMPs](#).

Name	A unique and human-readable name for the file transfer task that you are configuring. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.
DMP Publishing Protocol	  <p><b>Caution</b> HTTP pulling is highly scalable but can result in a distributed denial-of-service (DDoS) attack against any server, such as your DMM appliance, that is not built and configured to withstand the resulting load. If you choose HTTP as the protocol, be sure that your DMPs will pull all files from WAAS, ACNS, or another system that can tolerate the load.</p> <p>Choose HTTP or FTP as the protocol for the file transfer task.</p>

Emergency/Alarm	Check (tick) this box if the transferred files will be used during emergencies. Otherwise, do not check this box. Assets for emergencies are saved to a special partition
Application Types	The list of categories for advanced tasks. Click a category to see its tasks.
Available Applications	Advanced tasks in the category that you clicked. Click anywhere in a row to select the corresponding task. <ul style="list-style-type: none"> <li> <b>Select Applications</b> — Moves from the Available Applications table to the Selected Applications table the tasks that you selected.</li> <li><b>Name</b> — The unique and human-readable name that identifies a particular task.</li> <li><b>Description</b> — A brief description. The description is optional.</li> </ul>
Selected Applications	Advanced tasks that you selected from the Available Applications table, so that you could include them in the file transfer operation that you are configuring. Click a file transfer task to select its assets for deployment. <ul style="list-style-type: none"> <li> <b>Move Selected Item Up/Down</b> — Reorders the list so that the highlighted item moves up (or down) one row, exchanging places with the item that was above it (or below it).</li> <li> <b>Delete Selected Item</b> — Moves from the Selected Applications table to the Available Applications table the applications that you selected.</li> <li> <b>Zoom In/Out</b> — Shows only the Selected Applications table, hiding the Available Applications table. Alternatively, shows the Selected Applications table and the Available Applications table simultaneously.</li> </ul>
<b>System Tasks</b>	
<p><i>Predefined commands that you can send to a DMP. When you create or edit a system task, these are the elements:</i></p> <ul style="list-style-type: none"> <li><b>Name</b> — A unique and human-readable name for the system task that you are configuring. You must enter an IP address.</li> <li>• <b>Port</b> — The logical port number through which the multicast server transmits the stream. You must enter the port number.</li> </ul>

## Stopping All Running Events and Commands on DMPs

### Procedure

---

**Step 1** Use the Actions list or use the Play Now feature to deliver the Stop All Applications command to the DMP group that should receive this command.

---

### Related Topics

- [Using Play Now to Deploy Assets or Commands Immediately to DMPs](#)
- [Using the Actions List to Deploy Assets or Instructions Immediately to DMPs](#)

- [Disabling DMP Troubleshooting Access](#)

### Enabling DMP Troubleshooting Access

#### Procedure

---

**Step 1** Choose Digital Media Players > Advanced Tasks.

**Step 2** Click System Tasks in the list of defined tasks, and then click  Add New Application.

**Step 3** Enter a name and, optionally, a description.

**Step 4** Choose Set from the Request Type list.

**Step 5** Use this syntax in the Request field:  
**init.startService\_shell=yes&mib.save=1&mng.exit=1.**

**Step 6** Click Submit to save your work.

**Step 7** Deploy this troubleshooting access command to the DMP immediately.

---

### Related Topics

- [Disabling DMP Troubleshooting Access](#)

## Disabling DMP Troubleshooting Access

### Procedure

---

Step 1 Choose Digital Media Players > Advanced Tasks.

Step 2 Click System Tasks in the list of defined tasks, and then click  Add New Application.

Step 3 Enter a name and, optionally, a description.

Step 4 Choose Set from the Request Type list.

Use this syntax in the Request field:

**init.startService\_shell=no&mib.save=1&mg.exit=1.**

Step 5 Click Submit to save your work.

Step 6 Deploy this troubleshooting access command to the DMP immediately.

---

## Upgrading the Firmware or Kernel on DMPs

You can transfer a DMP kernel file or firmware image from your media library to a DMP and send commands to install it on the flash memory card inside the DMP.

### Before You Begin

- Add the firmware image or kernel file to your media library.
- Stop all events and commands that are running on the DMPs to be upgraded.
- Enable troubleshooting access on the DMPs to be upgraded.

### Procedure

---

Step 1 Choose Digital Signage > Digital Media Players > Advanced Tasks.

Step 2 Click DMP Firmware Upgrade.

Step 3 Click  Add New Application.

Step 4 Enter a unique name and, optionally, a description.

Step 5 Check the Is Kernel Upgrade? check box if the asset is a kernel file. Otherwise, if the asset is a firmware image, uncheck this check box.

Step 6 Click the parent category for this asset in the Media Categories object selector.

Step 7 Click the row that describes this asset in the Available Content table.

Step 8 Click Submit to save your work as a deployable action. Alternatively, click Cancel to discard your work.

Step 9 Deploy your work:

- Use the Actions list to deploy it immediately.
- Use the Play now feature to deploy it immediately.
- Use the Play in Future feature to schedule a future deployment.

Step 10 After the deployment is finished:

- a. Disable troubleshooting access on the DMPs that you upgraded.

- b. Restart the DMPs that you upgraded.

---

## Planning for and Responding to Emergencies

When emergencies of any kind affect sites where you deploy digital signage, you can use DMP displays to alert your viewers, warn them about dangers that might affect them, and direct them to safety. Or you can provide other kinds of information to them as you see fit. Until you stop playing emergency messages, they override all events that were scheduled to run automatically.

It is important to remember that emergency message insertions in your schedule will override *only* the events that are scheduled to run automatically. Furthermore, such insertions will override these events on *only* the DMPs that the emergency message insertion affected. All other DMPs in your network will abide by their schedule, without disruption.

Emergency conditions might prevent messages from playing on your DMP displays.

---

**Note** Consider very carefully which DMM-DSM users should have permission to work with your schedule and manage your DMP groups. Although all of the "Play in Future" features are suspended (for affected DMPs only) while an emergency is in progress, none of the "Play Now" features or "DMP Manager" features are suspended. Therefore, it is possible for a careless user or malicious user with sufficient permissions to start another event manually on the DMPs where an emergency message should play.

---

If policies in your organization require of you that one or more screen zones must show assets that are editable, you can stage the editable assets remotely on one of your external deployment servers instead of staging them locally on your DMPs. Then, the people in your organization who are entrusted to edit these assets can change them — to update the emergency message, for example — in real time.

After an emergency has stopped and normal scheduling has resumed on a DMP group and its children, any playlist or presentation that was scheduled for playback at that time will start from the beginning.

- [Creating Deployment Packages for Emergencies](#)
- [Provisioning Emergency Assets Immediately to DMP Local Storage](#)
- [Scheduling the Future Staging of Emergency Assets to DMP Local Storage or to External Servers](#)
- [Starting Playback of an Emergency Message](#)
- [Stopping Playback of an Emergency Message](#)

## Creating Deployment Packages for Emergencies

### Before You Begin

- Populate the playlist or design the presentation whose assets you will transfer to your DMPs.

### Procedure

---

**Step 1** Define a deployment task for DMS-CD to provisioning emergency assets to DMP local storage.

Alternatively, do the following to define a file transfer task that you can deploy:

- a. Choose **Digital Media Players > Advanced Tasks**, and then click **File Transfer to DMP or Server**.
- b. To create a new file transfer task, click  **Add New Application**.
- c. After the page is refreshed, do the following to define behaviors for, and save, the file transfer task:
  1. Enter a specific name, such as "Fire" or "Flash Flood," for the type of emergency. You might want to use a less specific name, such as "Emergencies," if this task will transfer the assets for multiple presentations or playlists, or if your organization uses one playlist or presentation for emergencies of all kinds.
  2. From the DMP Publishing Protocol list, choose FTP or HTTP, and then check the **Emergency/Alarm** check box.
  3. If the assets are part of a saved presentation, click **Presentations** in the Applications list. Alternatively, if the assets are part of a saved playlist, click **Playlists**.
  4. After the page is refreshed, click in the Available Applications list the name of the presentation or playlist whose assets should be transferred, and then click  **Select Applications**.
  5. (Optional) To transfer the assets for multiple playlists and presentations, repeat the preceding step.
  6. To save this task, so that it becomes available for deployments, click **Submit**.

---

**Note** Even though you created and saved a file transfer task, you have not used it yet. Your DMPs will not have local copies of the emergency assets until *after* you run this task successfully.

---

Step 2 Provision the emergency assets to your DMPs.

---

#### Using the Actions List to Provision Emergency Assets Immediately

##### Before You Begin

- Create and save deployable messages for playback during emergencies.

##### Procedure

---

Step 1 Click the DMP Manager tab and then, in the DMP Groups tree, click the name of the group whose member DMPs should have local copies of the emergency assets.

Step 2 In the Actions list, scroll down to the name of the deployment task or the file transfer task that you created, and then click that name.

Step 3 Click Go to issue the command immediately that transfers copies of the assets to your DMPs, and to create as many Go-to URL entries (all using the prefix "Alarm") as the number of presentations and playlists that you chose.

---

#### Using the Play Now Feature to Provision Emergency Assets Immediately

##### Before You Begin

- Create and save deployable messages for playback during emergencies.

##### Procedure

---

Step 1 Choose Schedules > Play Now.

Step 2 From the Select an Event Type list, choose System Tasks and then click Select System Tasks.

Step 3 Do one of the following after the Select Event dialog box opens:

- If you created a DMS-CD deployment task for this emergency, click Deployment Package in the Type column, and then click the name of the task in the Application Name column.
- If you created a file transfer task for this emergency, click File Transfer to DMP or Server in the Type column, and then click the name of the task in the Application Name column.

Step 4 Click OK to confirm your selection and close the Select Event dialog box.

Step 5 Click the name in the DMP Groups tree of the group whose member DMPs should have local copies of the emergency assets.

Step 6 Click Submit to issue the command immediately that transfers copies of the assets to your DMPs, and to create as many Go-to URL entries (all using the prefix "Alarm") as the number of presentations and playlists that you chose.

## Scheduling the Future Staging of Emergency Assets to DMP Local Storage or to External Servers

### Before You Begin

- Create and save deployable messages for playback during emergencies.

### Procedure

---

Step 1 Choose **Schedules > Play in Future**.

Step 2 From the calendar, choose the year, month, and day when the assets should be transferred. The timeline is updated automatically, so that it shows the schedule for that day.

Step 3 Choose **Advanced Tasks** from the **Add an Event** list, which is located under the timeline.

Step 4 Use features of the **Schedule Task** dialog box to choose the DMPs or the external servers.

- Click **Select Group**, and then click the name of the group whose members should have local copies of the emergency assets.
- Click **OK** to confirm your selection and close the **Select DMP Group** dialog box.

Step 5 Choose the task:

- Click **Select Advanced Tasks**.
- Do one of the following after the **Select Advanced Tasks** dialog box opens:
  - If you created a file transfer task for this emergency, click **File Transfer to DMP or Server** in the **Types** list, and then click the name of the task in the **Application Name** column.
  - If you created a DMS-CD deployment task for this emergency, click **Deployment Package** in the **Types** list, and then click the name of the task in the **Application Name** column.

---

**Note** You cannot use DMS-CD to deploy to an external server. DMS-CD supports deployments to DMPs only.

---

- Click **OK** to confirm your selection and close the **Select Advanced Tasks** dialog box.

You can use the provided controls to adjust the start and stop time for this task. Remember to allow sufficient time for the transfer to complete. The amount of time required can vary according to the cumulative file size of the selected assets, the capacity of your network, any congestion in your network, and possibly other factors. Emergency conditions might prevent messages from playing on your DMP displays.

Do not use any of the provided controls for repeating a task.

Step 6 Click **Save** to confirm your selections and close the **Schedule Task** dialog box.

Step 7 Click **Save All** to save your work in the schedule before you try to publish it.

Step 8 Click **Publish All** to transmit the deployment according to the schedule that you defined.

---

## Starting Playback of an Emergency Message

### Before You Begin

- Create and save deployable messages for playback during emergencies.

- Provision assets for the emergency message to DMP local storage or a network server.

#### Procedure

---

**Step 1** Do one of the following:

- Choose **Digital Media Players > Emergencies**.
- Choose **Schedules > Emergencies**.

**Step 2** Click **Start Emergency**.

**Step 3** From the **Select Emergency** list, choose the playlist or presentation that your DMPs should play during the type of emergency that is now in progress.

Entries that you see in the **Select Emergency** list are derived from file transfer tasks that you saved after checking the **Emergency/Alarm** check box. You cannot add the "ALARM" prefix manually to the name of a (Go to) URL task to make the task appear in the **Select Emergency** list. Nor can you delete the "ALARM" prefix manually from the name of a (Go to) URL task to exclude the task from the **Select Emergency** list.

**Step 4** Expand the **Select DMP Group** tree, click the entry for the DMP group whose member DMPs should all announce the emergency, and then click **Start**.

If you choose a DMP group that has child groups, the child groups and their member DMPs are also selected automatically.

While this emergency is in-progress, the event-scheduling features at **Schedule > Play in Future** will be suspended temporarily for whichever group and children you chose. However, your other DMP groups will not be affected. You still can schedule events for those other groups. Later, after you stop this emergency, the event-scheduling features at **Schedule > Play in Future** will be restored for the group and children that you chose.

**Step 5** To confirm your selections and start playback immediately of your emergency presentation or emergency playlist, click **OK**. (Emergency conditions might prevent messages from playing on your DMP displays.) Alternatively, to discard your selections without playing any assets for any emergency, click **Cancel**.

A message tells you whether you submitted the emergency successfully. After you dismiss the message, the page is refreshed. If you submitted the emergency, the DMP group that you chose in [Step 4](#) is colored red in the **Select DMP Group** tree.

**Tip** You can submit an emergency to a DMP group while it is showing a playlist or presentation that describes some other emergency. There is no need to explicitly stop playback of the current emergency message before you start another one.

---

#### Stopping Playback of an Emergency Message

##### Before You Begin

- Start playback of an emergency message.

#### Procedure

---

**Step 1** Do one of the following:

- Choose **Digital Media Players > Emergencies**.
- Choose **Schedules > Emergencies**.

**Step 2** Click **Stop Emergency**.

**Step 3** Expand the **Select DMP Group** tree, click the DMP group that is colored red, and then click **Stop**.

If you choose a DMP group that has child groups, the child groups and their member DMPs are also selected automatically.

**Step 4** To confirm your selections, which will stop playback of your emergency message and restore normal scheduling for the DMP group (and children) that you chose, click **OK**. Alternatively, to discard your selections without stopping the emergency, click **Cancel**.

A message tells you whether you stopped the emergency successfully. After you dismiss the message, the page is refreshed. If you stopped the emergency, the DMP group that you chose in [Step 3](#) is no longer colored red in the **Select DMP Group** tree.

---

If you selected a DMP group whose member DMPs were not showing emergency messages, these DMPs will stop and then restart their playback of whatever asset they are scheduled to show.

If separate emergencies were in effect simultaneously across multiple DMP groups and you stopped the emergency for only one group, remember that the event-scheduling features at **Schedule > Play in Future** still are

suspended for all groups where emergencies remain in effect.

#### Related Topics

- [Starting Playback of an Emergency Message](#)

### Scheduling Time Slots for Media and Events on DMPs

**Tip** Network congestion or other performance problems at a DMP deployment site might cause the assets that you deploy to pause, stop, or play at unacceptably low speeds. To work around this problem, troubleshoot network performance at the deployment site and consider upgrading its network or applying policies to shape and prioritize its traffic.

In DMM-DSM, you can schedule events to start manually ("Play Now") or run automatically ("Play in Future"). Topics in this section tell you how to deliver to your DMPs and servers the assets and commands that you saved in DMM-DSM, as well as the TV channels and VoDs that you saved in DMM-ETV.

- [Using Play Now to Deploy Assets or Commands Immediately to DMPs](#)
- [Working with Future Deployments](#)
- [Preempting a Recurring Event for a One-time Event](#)
- [Using Deployment Reports](#)

**Note** To learn how to configure DMM-DSM support for ACNS and WAAS, see [Configuring the Settings to Use ACNS or WAAS](#).

### Using Play Now to Deploy Assets or Commands Immediately to DMPs

In DMM-DSM and DMM-ETV, you can schedule any command, event, presentation, playlist, TV channel, electronic program guide, VoD, or anything else for deployment to DMPs. You can deploy immediately to one DMP or to multiple DMPs that all use the same one DMP group as their parent.

- Note** • In this release, we do not support immediate deployments to external (FTP) servers.
- We recommend that you avoid using immediate deployments with ACNS, due to the amount of time required to distribute assets throughout your network and to its edge. If you do so despite this recommendation, DMM-DSM always uses the default ACNS channel. You cannot select any other channel.
  - We recommend that you avoid using immediate deployments with WAAS, due to the amount of time required to distribute assets throughout your network and to its edge.

#### Before You Begin

- You must already have created and saved what you will deploy. See [Working with Assets and Categories in Your Media Library](#). See also [Using Advanced Tasks](#).
- You must already have created the DMP group whose member DMPs should receive the deployment. See [Managing and Grouping Your DMPs](#).

#### Procedure

**Step 1** Choose **Schedules > Play Now**.

**Step 2** From the Event Type list, choose **Digital Signage**, **Enterprise TV**, or **System Tasks**, depending on which of these is the deployment type.

The option that you choose from the Event Type list causes a button to be shown. Its name is derived from your choice.

**Step 3** To choose specifically what should be deployed to your DMPs, click this button.

A dialog box opens, from which you can choose specifically what to deploy. The name and elements of this dialog box will vary, depending on which option you chose from the Event Type list.

**Step 4** Click the name of the instruction or asset to be deployed, and then do one of the following:

- To confirm your selection and close the dialog box, click **OK**.
- To discard your selection and close the dialog box, click **Cancel**.

**Step 5** In the DMP Groups object selector, click the name of a DMP group to see a list of its member DMPs.

**Step 6** In the list of DMPs, Ctrl-click the name of each DMP that should receive the deployment.

**Step 7** Do one of the following:

- To confirm your selections and deploy the element immediately, click **Submit**.

- To discard your work for this deployment, click **Cancel**.

---

### Related Topics

- [Using the Actions List to Deploy Assets or Instructions Immediately to DMPs](#)
- [Working with Future Deployments](#)

### Using the Actions List to Deploy Assets or Instructions Immediately to DMPs

#### Procedure

---

**Step 1** Choose Digital Media Players > DMP Manager.

**Step 2** Do either of the following:

- Navigate in the DMP Groups object selector, expanding its levels as necessary until you find in its hierarchy the parent group for a DMP that should receive assets or instructions. Then, click the name of this DMP group in the object selector.
- Choose an option from the Filter list to restrict which DMPs the DMP List table describes.

**Step 3** (Optional) If DMP data in the table straddles multiple pages, use pagination controls above the table to move between pages.

**Step 4** Choose which DMPs in the DMP List table should receive the assets or instructions that you will deploy.

**Step 5** Choose an action from the Action list, above the DMP List table.

**Step 6** Click **Go**. The specified action starts immediately.

---

### Related Topics

- [Using Play Now to Deploy Assets or Commands Immediately to DMPs](#)
- [UI Reference: Top-Level Settings to Manage DMPs and DMP Groups](#)
- [Scheduling Time Slots for Media and Events on DMPs](#)

### Working with Future Deployments

You can schedule future time slots for elements that you will deploy once or repeatedly to:

- One registered DMP, if it belongs to a DMP group which does not contain any other DMPs.
- Multiple registered DMPs that all use the same one DMP group as their parent.
- All of your registered external (FTP) deployment servers; the schedule treats all of your registered external servers identically.

You can schedule a deployment to occur at any time and recur any number of times (within reason), and you can schedule any number of deployments. The schedule can manage multiple deployments simultaneously and — assuming that a DMP has a fast network connection and you send deployments to it that are not mutually exclusive — a DMP can receive multiple deployments simultaneously.

**Tip** You can view two types of summary for any scheduled deployment. See:

- [Understanding Tooltips in the Schedule Timeline](#)
  - [Viewing Status Messages Inline for Deployed Events in the Schedule Timeline](#)
- 

This section contains these topics:

- [Best Practices for Managing and Maintaining the Schedule](#)
- [Understanding Future Deployments for Presentations](#)
- [Understanding Time Zones in the Schedule](#)
- [Scheduling the Time Slot for a Future Event](#)

### Best Practices for Managing and Maintaining the Schedule

Avoid placing entries in your schedule that recur often and persist for an unreasonably long time, and also avoid all other practices that might cause your schedule to become too large. Otherwise, DMM might not generate your manifest files quickly enough and your ACNS CDM or root CE might time out. We recommend that you apply this rough algorithm:

- An entry that recurs daily should persist in your schedule for no more than 3 days.
- An entry that recurs weekly should persist in your schedule for no more than 3 weeks.

- Almost never schedule event instances that extend more than 60 days into the future. The exceptions to this rule are:
  - An entry that recurs monthly can persist in your schedule for as long as 3 months.
  - An entry that recurs annually can persist in your schedule for as long as 3 years.

Furthermore, we recommend these additional best practices:

- Avoid deploying assets to any given DMP more than once per day. Ideally, all deployments should occur outside your normal business hours. You can schedule a deployment package that contains assets for more than one presentation if the target DMP has sufficient local storage to save the entire package. Applied outside normal business hours, this simple method reduces your dependence on daytime deployments, which might otherwise disrupt your digital signage temporarily.
- Avoid having any more than approximately 200 events (of all kinds, combined) saved in your schedule at any one time.
- Avoid having any more than approximately 100 presentations saved in DMD at any one time. If your presentations database grows too large, you might be prevented from designing, saving, and deleting presentations, and the start time might be disrupted for your scheduled events.
- Instead of creating a presentation that is similar to one that used to be in your schedule, simply modify the old presentation and reschedule it.
- Avoid extending the playback window for your customer-facing presentations and playlists beyond the actual hours when customers will see them.
- If you are not sure when or how many times a task or presentation occurs in your schedule, you can use the Schedule Reports feature.

### Understanding Future Deployments for Presentations

You can deploy only one presentation at a time if the assets that it uses should be stored directly on your DMPs. To check the free space on the SD memory card in a DMP, choose **Digital Media Players > DMP Manager**, and then look in the DMP List table for the amounts of free space in internal and external storage. Alternatively, log in to the local instance of DMPDM, and then click **Internal Storage**. If you want a particular presentation to play during stage-one failover on a DMP, the combined file size of all its assets must not be any more than:

- 0.9 GB (900 MB) on a DMP 4300G.
- 1.9 GB on a DMP 4305G.
- 3.8 GB on a DMP 4400G.

---

**Caution** Do not delete the scheduled deployment job for a presentation to stop it from playing on your DMPs. If you delete the deployment job, your DMPs will continue to use the presentation as if you did nothing. This happens because each deployment job includes an instruction to stop, but you delete that instruction when you delete the deployment job that contains it. To stop your DMPs from using a presentation in this case, create and deploy an advanced task to *stop all applications*. See the "[System Tasks](#)" row in [Table 3-29](#).

---

**Note** It is important that you understand all of the possible limitations and effects of deploying to an FTP server, as well as the exact circumstances that lead to these effects. Files are sometimes unplayable or deleted automatically; subdirectories are sometimes created automatically; and values that you enter in DMM-DSM are sometimes changed automatically.

- Video files do not play at all if you deploy a presentation to an FTP server when the presentation uses MPEG files that are:
    - Requested through Microsoft Proxy Server.
    - Requested through Microsoft Internet Security and Acceleration Server.
  - When your media library in DMM-DSM is the source for a file that you deploy as part of a presentation, and when you select an FTP server as the target to receive that file, DMM-DSM transfers copies of the relevant file to *all* of the FTP servers that you have registered. After the transfer is completed, DMM-DSM *deletes* the original file from its media library, and then changes the relevant presentation so that it uses a URL instead of a local path. The URL that DMM-DSM enters automatically is specific to whichever FTP server you registered first.
  - When an HTTP URL is the source for a deployed file, and when the pathname on the source server contains subdirectories that do not exist on the target FTP server, DMM-DSM automatically creates the required subdirectories on the FTP server.
- 

### Understanding Time Zones in the Schedule

Future time slots that the schedule describes will always designate hours in boldface numerals according to the UTC time zone offset for the locale where your DMM appliance is installed. If you are working from any other time zone when you view the schedule, this offset will differ from the offset for your locale and the difference might be confusing. Furthermore, the offset might be confusing even if you and your DMM appliance are together in one time zone but you want to schedule time slots for a DMP that is in some other time zone.

In either scenario, you can cause the schedule to designate hours from two time zones simultaneously. One of these time zones is always the one for your DMM appliance. To choose the second time zone (whether it is for your locale or the locale of a DMP), select a named UTC offset option, such as "America/Los Angeles," from the untitled list above the schedule.

The schedule is updated immediately to show designated hours from the second time zone that you selected, in addition to the designated hours that it always shows for your DMM appliance:

- Small, plain numerals designate hours for the UTC-offset locale that you selected.
- Large, boldface numerals designate hours for the locale where your DMM appliance is installed.

### Scheduling the Time Slot for a Future Event

---

**Tip** Displayed times for deployments in the schedule are relative to the time zone where you deployed your DMM appliance, not the time zone where you deployed any DMP, and not the time zone for any other locale. You set the time zone value for your DMM appliance when you used AAI to configure it and you can use AAI to correct the time zone value if it is wrong.

- To learn how to set or reset the time zone, see the "Administering a DMM Appliance" chapter in *Appliance Administration Guide for Cisco Digital Media System 5.1.x* on Cisco.com.
- To understand how the schedule represents time zones, see [Understanding Time Zones in the Schedule](#).
- If the user interface for the schedule does not load correctly in your browser, see *Release Notes for Cisco Digital Media System 5.1.x* on Cisco.com.

---

### Before You Begin

- You must already have created and saved the elements that you will deploy. See [Working with Assets and Categories in Your Media Library](#).
- You must already have created the DMP group that should receive a deployment. See [Managing and Grouping Your DMPs](#).

### Procedure

---

**Step 1** Choose Schedules > Play in Future.

**Step 2** From the calendar, choose the year, month, and day when the deployment should start.

The timeline is updated automatically, so that it shows the schedule for that day.

**Step 3** From the Event Type list, under the timeline, choose the deployment type.

**Step 4** When the Schedule Task dialog box opens, complete these steps:

- a. Click **Select Group**, click the group name for the DMPs or the external (FTP) deployment servers that should receive this deployment, and then click **OK**.
- b. Click the **Select <event\_type> Tasks** button, click the name of the specific event to be deployed, and then click **OK**.
- c. To designate the start and stop times for this event:
  - In the **Start Time** area — For the deployment date that you chose in [Step 2](#), enter the hour (numeric, in the range from 1 to 12) and minute (numeric, in the range from 00 to 59) when DMPs should start this event, and then enter either **AM** or **PM** as the period.
  - In the **Stop Time** area — Use the same method to specify when DMPs should stop this event.

**Step 5** From the Repeat list, choose the recurrence interval for this event. The intervals are:

- Never
- Every Day
- Every Week
- Every Month
- Every Year

**Step 6** To save your selections, click **Save All**.

- 
- Note** • If you do not click **Save All**, the schedule discards your selections immediately after you refresh your browser or load any other page.
- You must click **Save All** even if you do not plan to deploy the event right away. Later, when you are ready to deploy the event, click **Publish All**.

---

**Step 7** (Optional) To make copies of an event in the schedule, so that it recurs as many times as you want and at any interval that you specify:

- a. Click the event description on the timeline, and then choose **Add an Event > Duplicate All**.
- b. Click the first **Select** button to choose the group whose event will be copied, and then click **OK**.
- c. Click the second **Select** button to choose the group that should receive the copy, and then click **OK**.
- d. Click **Save**.

**Step 8** To transmit the deployment according to the schedule that you defined — and synchronize it if you use ACNS or WAAS — click **Publish All**.

---

### Understanding Tooltips in the Schedule Timeline

Whenever your pointer hovers over a event in the timeline, the schedule shows a tooltip. Information in the tooltip describes the current status of the corresponding event and summarizes its most important attributes. Information in the tooltip is organized as follows:

Table 3-30 Schedule Timeline Tooltips

Category	Description
Status	<p>One of the following:</p> <ul style="list-style-type: none"> <li>• <b>New</b> — You made selections to define a new deployment. However, because you have not yet clicked Save, the schedule will discard your selections if you refresh your browser or load any other page in it.</li> <li>• <b>Saved</b> — You made selections to define a new deployment and you clicked Save. You created a permanent record for the deployment, but have not scheduled it yet to run.</li> <li>• <b>Published</b> — You made selections to define a deployment, you saved your selections, and the deployment is scheduled to run at the times that you specified.</li> <li>• <b>Scheduled</b> — The deployment is occurring now.</li> <li>• <b>Finished</b> — The deployment occurred at the scheduled time and is now stopped.</li> </ul>
App	The selection that you made from the Applications list.
Group	The selection that you made from the DMP Groups list.
From	The date and time when the deployment is (or was) scheduled to start.
To	The date and time when the deployment is (or was) scheduled to stop.
Repeat	The number of times that the deployment is scheduled to recur.
Start Cmd Result (Total/OK/Failed)	<p><i>N/N/N</i>, where:</p> <ul style="list-style-type: none"> <li>• The first <i>N</i> is a color-coded (black) numeral that counts the total number of times that DMM-DSM tried to deploy the command to start the designated task.</li> <li>• The second <i>N</i> is a color-coded (green) numeral that counts the number of times that DMM-DSM succeeded in deploying the command to start the designated task.</li> <li>• The third <i>N</i> is a color-coded (red) numeral that counts the number of times that DMM-DSM failed to deploy the command to start the designated task.</li> </ul>
Stop Cmd Result (Total/OK/Failed)	<p><i>N/N/N</i>, where:</p> <ul style="list-style-type: none"> <li>• The first <i>N</i> is a color-coded (black) numeral that counts the total number of times that DMM-DSM tried to deploy the command to stop the designated task.</li> <li>• The second <i>N</i> is a color-coded (green) numeral that counts the number of times that DMM-DSM succeeded in deploying the command to stop the designated task.</li> <li>• The third <i>N</i> is a color-coded (red) numeral that counts the number of times that DMM-DSM failed to deploy the command to stop the designated task.</li> </ul>

#### Viewing Status Messages Inline for Deployed Events in the Schedule Timeline

Whenever you let your pointer hover over a scheduled deployment in the timeline, DMM-DSM describes the current status of the corresponding deployment and summarizes its most important attributes. Information in the popup is organized as follows:

Table 3-31 Elements to Describe the Current Status of Scheduled Events

Category	Description
Application Name	The selection that you made from the Applications list.
Application Type	<p>Either Digital Media Designer (see <a href="#">Working with Presentations, Templates, and Presentation Playlists for Digital Signage</a>) or one of the following (see <a href="#">Using Advanced Tasks</a>):</p> <ul style="list-style-type: none"> <li>• (Go to) URL</li> <li>• Deployment Package</li> <li>• DMP Audio/Video Settings</li> <li>• DMP Discovery (autoregistration)</li> <li>• DMP Display Controls</li> <li>• DMP Failover Retry</li> <li>• DMP Firmware Upgrade</li> </ul>

	<ul style="list-style-type: none"> <li>• DMP Startup URL</li> <li>• File Transfer to DMP or Server</li> <li>• System Tasks</li> </ul>
From	The date and time when the deployment is (or was) scheduled to start.
To	The date and time when the deployment is (or was) scheduled to stop.
How Often	The number of times that the deployment is scheduled to recur.
Status	<p>One of the following:</p> <ul style="list-style-type: none"> <li>• <b>New</b> — You made selections to define a new deployment. However, because you have not yet clicked Save, DMM-DSM will discard your selections if you refresh your browser or load any other page in it.</li> <li>• <b>Saved</b> — You made selections to define a new deployment and you clicked Save. DMM-DSM created a permanent record for the deployment, but has not scheduled it yet to run.</li> <li>• <b>Published</b> — You made selections to define a deployment, you saved your selections, and DMM-DSM has scheduled the deployment to run at the times that you specified.</li> <li>• <b>Scheduled</b> — The deployment is occurring now.</li> <li>• <b>Finished</b> — The deployment occurred at the scheduled time and is now stopped.</li> </ul>
Group	The selection that you made from the DMP Groups list.
Start Command Summary (Total/OK/Failed)	<p><i>N/N/N</i>, where:</p> <ul style="list-style-type: none"> <li>• The first <i>N</i> is a color-coded (white) numeral that counts the total number of times that DMM-DSM tried to deploy the command to start the designated task.</li> <li>• The second <i>N</i> is a color-coded (green) numeral that counts the number of times that DMM-DSM succeeded in deploying the command to start the designated task.</li> <li>• The third <i>N</i> is a color-coded (red) numeral that counts the number of times that DMM-DSM failed to deploy the command to start the designated task.</li> </ul>
Stop Command Summary (Total/OK/Failed)	<p><i>N/N/N</i>, where:</p> <ul style="list-style-type: none"> <li>• The first <i>N</i> is a color-coded (white) numeral that counts the total number of times that DMM-DSM tried to deploy the command to stop the designated task.</li> <li>• The second <i>N</i> is a color-coded (green) numeral that counts the number of times that DMM-DSM succeeded in deploying the command to stop the designated task.</li> <li>• The third <i>N</i> is a color-coded (red) numeral that counts the number of times that DMM-DSM failed to deploy the command to stop the designated task.</li> </ul>

In addition, a status bar at the bottom of the popup window counts the number of errors associated with the described deployment.

### Preempting a Recurring Event for a One-time Event

In some cases, you might want to show a presentation one time, or for a limited time, that overlaps with a recurring deployment.

For example, you might schedule a presentation to run from 9:00 a.m. to 6:00 p.m. every weekday in the month of March, but want to show a different presentation on the second Tuesday in March. The problem in this scenario is that your DMP cannot prioritize contradictory events that are scheduled to start simultaneously. However, there are three possible methods that you might use to schedule a preemption. In this scenario, you can do any of the following:

Method 1	<ol style="list-style-type: none"> <li>1. Schedule and deploy a recurring event for the first uninterrupted span of dates.</li> <li>2. Schedule and deploy the one-time event.</li> <li>3. Schedule and deploy a copy of the first recurring event for the second uninterrupted span of dates.</li> </ol>

Method 2	<p>Create two DMP groups. In this scenario, we will call them Group_A and Group_B.</p> <ul style="list-style-type: none"> <li>For Group_A, schedule an event that recurs throughout the entire span of dates.</li> <li>For Group_B, schedule the one-time event.</li> </ul> <p>Then complete these steps:</p> <ol style="list-style-type: none"> <li>When the one-time event should begin, move your DMPs from Group_A to Group_B.</li> <li>When the one-time event should end, move your DMPs back to Group_A, and then select Schedules &gt; Play Now.</li> <li>In the DMP Groups object selector, click the Group_A name to see its member DMPs in the untitled table.</li> <li>In the untitled table, Ctrl-click each DMP that should start again to show the recurring presentation.</li> <li>Choose Select an Event Type &gt; Digital Signage and then click Select Digital Signage.</li> <li>Click the presentation name and then click OK.</li> </ol>
Method 3	<ol style="list-style-type: none"> <li>Schedule the recurring event to run every weekday, as you would expect, from 9:00 a.m. to 6:00 p.m.</li> <li>Use one-time scheduling to start an advanced task, such as the (Go to) URL task if the event is a live video stream, at 9:05 a.m, so that it interrupts the recurring event instead of conflicting with its start time, and then schedule this one-time event to stop at 6:00 p.m.</li> </ol> <p>In this method, the one-time event cannot be a presentation; it must be an advanced task. The recurring task will begin again, as expected, the next day.</p>

### Using Deployment Reports

You can view, configure, and export "proof-of-play" reports for the presentations and tasks that you have deployed in your digital signage network.

#### Procedure

- 
- Step 1 Choose Schedules > Reports.
  - Step 2 Check the check boxes for the relevant DMP groups.
  - Step 3 Enter date range values in the From field and the To field.
  - Step 4 From the Report Type list, select the report type.
  - Step 5 Click Go.
- 

### Using Administrative Options

This section contains these topics:

- [Configuring User Rights and Permissions for Digital Signage and Enterprise TV](#)
- [Limiting User Permissions](#)
- [Configuring DMM-DSM Server Settings](#)
- [Configuring the Settings to Use ACNS or WAAS](#)
- [Configuring the Settings to Deploy to External Servers](#)

### Configuring User Rights and Permissions for Digital Signage and Enterprise TV

In DMM-DSM, you can manage access rights and permission levels for administrators and members of the Digital Signage user group that is managed at a higher level in DMS-Admin. The rights and permissions that you manage in DMM-DSM are ones that pertain to digital signage and Enterprise TV.

**Tip** To understand the high-level concepts and workflow for managing user accounts, access rights, and permission levels, see [Understanding User Management Concepts and Workflow, page 2-6](#).

---

#### Before You Begin

To see and use the Settings tab, you must be logged in as an administrator.

#### Procedure

- 
- Step 1 Choose Settings > User Accounts, and then choose the options that meet your requirements.
  - Step 2 Click Submit.
- 

### Related Topics

- [Table 3-32](#)

Table 3-32 Elements for Configuring DMM-DSM User Accounts

Element	Description
Users List	
<i>Choose an account whose digital signage or Enterprise TV access rights and permission levels you will edit. When you click a username, DMM-DSM automatically shows the Change User pane for the corresponding user account.</i>	
Change User pane	
<i>A worksheet where you edit attributes of the selected user account.</i>	
Name	A unique username. The name is unique in the sense that you have not used it as the name for any other user account that you created in DMM-DSM. You must enter the username.
Description	Optional, brief description of the user account and its purpose.
Password   Repeat	The password for the user account. You must enter a password, and then reenter it.
Administrator	The check box to check if this account belongs to an administrator. When a user account belongs to an administrator, the corresponding user is granted full permissions to create, read, write, and delete every object type without limitation. Otherwise, uncheck this check box. After you uncheck it, you must manually change the permissions for each user role and each object type that pertain to this user account. Because we recommend that you follow a best practice in which you create only a few users, this check box is checked by default each time that you add a user account.
Role	The list of user role types. Each type of role is associated with some of the features in DMM-DSM. Choose a role to see or change the corresponding permissions for the user whose account you are adding or editing. After you choose a role, you can set the permissions to create, read, write, and delete objects that are relevant to that role. Depending on the role that you choose, an object might be a registered DMP, a registered FTP server, a category in your digital media library, an application that you configured, or the target device (DMP or FTP server) to receive a scheduled deployment. <ul style="list-style-type: none"> <li>• <b>DMP Manager</b> — A user with permissions to manage every DMP in your digital signage network, only the DMPs within particular DMP groups that you specify, or no DMPs whatsoever.</li> <li>• <b>Content Manager</b> — A user with permissions to manage every category in your media library, only the particular categories that you specify, or none of the categories.</li> <li>• <b>Application Manager</b> — A user with permissions to work with every application type, only the particular application types that you specify, or no applications of any kind.</li> <li>• <b>Publisher Manager</b> — A user with permissions to schedule media deployments to all of your registered DMPs and external (FTP) deployment servers, only the particular DMPs and FTP servers that you specify, or none of the registered DMPs or FTP servers.</li> </ul>
untitled table	
<i>Rows in the untitled table describe user account permissions.</i>	
Objects	Contains the Create, Read, Write, and Delete buttons. To see or edit any one of these types of permissions as it applies to the specified user, you must first click the corresponding button. If you uncheck both the All check box and the Selected check box in the column under a button, DMM-DSM automatically shows the words "No permissions" in red, to signify that the user does not have any permissions of that type in relation to the objects that are relevant to the role that you selected from the Role list.
All	Contains the check box that you select to assign global permissions to the user, so that he or she can always create, see, edit, and delete objects that pertain to whichever user role you selected from the Role list. Click the relevant button, and then check the corresponding check box in the All row.
Selected	Contains the check box that you select to assign limited permissions to the user, so that he or she can create, see, edit, and delete only a subset of the objects that pertain to the user role that you selected from the Role list. Click the relevant button, select the corresponding check box in the Selected row, and then choose the subset where the user permissions should apply. Depending on the object type, you might choose the subset by clicking its name in an object selector or clicking its name in a table; DMM-DSM automatically shows either an object selector or a table from which to choose the subset.

## Limiting User Permissions

You can restrict the permissions that you grant to particular user accounts in DMM-DSM. For example, you might grant a user the permission to use only the advanced tasks that you choose or to deploy presentations to only the DMPs that you choose.

The list of "applications" that this section describes includes two applications (called "Enterprise TV" and "Enterprise TV VoD") in addition to the full list of advanced tasks. Each Enterprise TV user must have at least read-only permission to the "Enterprise TV" application, which pertains to the electronic program guide.

**Tip** To understand the high-level concepts and workflow for managing user accounts, access rights, and permission levels, see [Understanding User Management Concepts and Workflow, page 2-6](#).

### Before You Begin

To see and use the Settings tab, you must be logged in as an administrator.

### Procedure

**Step 1** Choose Settings > User Accounts.

**Step 2** In the Users list, click a username to highlight it. DMM-DSM automatically shows the Change User pane for the corresponding user account, where you can edit the permissions that apply to the user.

**Step 3** Choose options to limit any or all of the permissions that you will grant to the user.

If you do not understand your options, see [Table 3-32](#) or consider the examples in these scenarios:

- [Scenario 1: User Who Can Work with Assets for Signage or Enterprise TV but Cannot Schedule Time Slots](#)
- [Scenario 2: User Who Can Administer One DMP Group but Cannot Manage Assets](#)
- [Scenario 3: User Who Can Administer One DMP Group, Manage Assets, and Schedule Time Slots](#)
- [Scenario 4: User Who Can Schedule Time Slots for One DMP Group But Has No Other Rights](#)

By limiting permissions in specific ways, similar to the ways that these examples demonstrate, you can assign highly specialized combinations of access to any DMM-DSM user. The examples in these scenarios describe some of the commonest types of limited permissions that you might want to assign and tell you how to assign them.

**Step 4** After you have selected the options to meet your requirements, click Submit.

### Scenario 1: User Who Can Work with Assets for Signage or Enterprise TV but Cannot Schedule Time Slots

To restrict user permissions as they should be restricted in this scenario, you would do the following.

1. From the Role list, select **DMP Manager**, check the **All** check box in the Read column, and then uncheck every check box in the Create, Write, and Delete columns.
2. From the Role list, select **Content Manager**, and then check the **All** check box in the Create, Read, Write, and Delete columns.
3. From the Role list, select **Application Manager**, and then check the **Selected** check box in the Create, Read, Write, and Delete columns. Next, do all of the following:
  - Click **Create**, and then — in the table that associates permissions with applications — check only these check boxes: **Digital Media Designer**, **Enterprise TV**, **Enterprise TV VoD**, and **(Go to) URL**.
  - Click **Read**, and then — in the table that associates permissions with applications — check only these check boxes: **Digital Media Designer**, **Enterprise TV**, **Enterprise TV VoD**, and **(Go to) URL**.
  - Click **Write**, and then — in the table that associates permissions with applications — check only these check boxes: **Digital Media Designer**, **Enterprise TV**, **Enterprise TV VoD**, and **(Go to) URL**.
  - Click **Delete**, and then — in the table that associates permissions with applications — check only these check boxes: **Digital Media Designer**, **Enterprise TV**, **Enterprise TV VoD**, and **(Go to) URL**.
4. From the Role list, select **Publisher Manager**, check the **All** check box in the Read column, and then uncheck every check box in the Create, Read, Write, and Delete columns.
5. Click **Submit**.

### Scenario 2: User Who Can Administer One DMP Group but Cannot Manage Assets

To restrict user permissions as they should be restricted in this scenario, you would do the following.

1. From the Role list, select **DMP Manager**, and then check the **Selected** check box in the Create, Read, Write, and Delete columns. Next, do all of the following:
  - Click **Create**. Then, in the object selector, click a DMP group to highlight it.
  - Click **Read**. Then, in the object selector, click and highlight the same DMP group that you highlighted for Create permissions.

- Click **Write**. Then, in the object selector, click and highlight the same DMP group that you highlighted for Create permissions.
  - Click **Delete**. Then, in the object selector, click and highlight the same DMP group that you highlighted for Create permissions.
2. From the Role list, select **Content Manager**, and then uncheck every check box in the Create, Read, Write, and Delete columns.
  3. From the Role list, select **Application Manager**, and then — in the table that associates permissions with applications — check only these check boxes: **DMP Discovery**, **DMP Video/Audio Settings**, **System Tasks**, **DMP Firmware Upgrade**.
  4. From the Role list, select **Publisher Manager**, and then check the **Selected** check box in the Create, Read, Write, and Delete columns. Next, do all of the following:
    - Click **Create**. Then, in the object selector, click and highlight the same DMP group that you highlighted for the DMP Manager role.
    - Click **Read**. Then, in the object selector, click and highlight the same DMP group that you highlighted for the DMP Manager role.
    - Click **Write**. Then, in the object selector, click and highlight the same DMP group that you highlighted for the DMP Manager role.
    - Click **Delete**. Then, in the object selector, click and highlight the same DMP group that you highlighted for the DMP Manager role.
  5. Click **Submit**.

### Scenario 3: User Who Can Administer One DMP Group, Manage Assets, and Schedule Time Slots

To restrict user permissions as they should be restricted in this scenario, you would do the following.

1. From the Role list, select **DMP Manager**, and then check the **Selected** check box in the Create, Read, Write, and Delete columns. Next, do all of the following:
  - Click **Create**. Then, in the object selector, click a DMP group to highlight it.
  - Click **Read**. Then, in the object selector, click and highlight the same DMP group that you highlighted for Create permissions.
  - Click **Write**. Then, in the object selector, click and highlight the same DMP group that you highlighted for Create permissions.
  - Click **Delete**. Then, in the object selector, click and highlight the same DMP group that you highlighted for Create permissions.
2. From the Role list, select **Content Manager**, and then select the **All** check box in the Create, Read, Write, and Delete columns.
3. From the Role list, select **Application Manager**, and then — in the table that associates permissions with applications — check every check box.
4. From the Role list, select **Publisher Manager**, and then check the **Selected** check box in the Create, Read, Write, and Delete columns. Next, do all of the following:
  - Click **Create**. Then, in the object selector, click and highlight the same DMP group that you highlighted for the DMP Manager role.
  - Click **Read**. Then, in the object selector, click and highlight the same DMP group that you highlighted for the DMP Manager role.
  - Click **Write**. Then, in the object selector, click and highlight the same DMP group that you highlighted for the DMP Manager role.
  - Click **Delete**. Then, in the object selector, click and highlight the same DMP group that you highlighted for the DMP Manager role.
5. Click **Submit**.

### Scenario 4: User Who Can Schedule Time Slots for One DMP Group But Has No Other Rights

To restrict user permissions as they should be restricted in this scenario, you would do the following.

1. From the Role list, select **DMP Manager**, check the **All** check box in the Read column, and then uncheck every check box in the Create, Write, and Delete columns.
2. From the Role list, select **Content Manager**, and then uncheck every check box in the Create, Read, Write, and Delete columns.
3. From the Role list, select **Application Manager**, check the **All** check box in the Read column, and then uncheck every check box in the Create, Write, and Delete columns.
4. From the Role list, select **Publisher Manager**, and then check the **Selected** check box in the Create, Read, Write, and Delete columns. Next, do all of the following:
  - Click **Create**. Then, in the object selector, click a DMP group to highlight it.
  - Click **Read**. Then, in the object selector, click and highlight the same DMP group that you highlighted for Create permissions.
  - Click **Write**. Then, in the object selector, click and highlight the same DMP group that you highlighted for Create permissions.
  - Click **Delete**. Then, in the object selector, click and highlight the same DMP group that you highlighted for Create permissions.
5. Click **Submit**.

## Configuring DMM-DSM Server Settings

You must configure DMM-DSM to use the correct Java servlet server and to use one, consistent username and password for administrative access to all of the DMPs that you will manage centrally.

### Before You Begin

To see and use the Settings tab, you must be logged in an administrator.

### Procedure

Step 1 Choose Settings > Server Settings.

Step 2 In the Servlet Server Address field, enter the routable IP address or resolvable DNS hostname for your DMM appliance. It will not be updated automatically if you use AAI to change the IP address of your DMM appliance.

Step 3 In the DMP User Name field, enter the one administrative username that you have configured all of your DMPs to share.

Step 4 In the DMP User Password field, enter the one administrative password that you have configured all of your DMPs to share.

Step 5 Click Save.

### Configuring the Settings to Use ACNS or WAAS

You can configure DMM-DSM to use the content-distribution features of ACNS or WAAS.

**Caution** Never delete an ACNS channel that Cisco DMS uses. If you do, you will not be able to see, select, edit, or delete in your schedule any events that use the deleted channel. Failover (content substitution) occurs on your DMPs when scheduled events call upon missing assets. Before you delete any ACNS channel, be sure that you have deleted from your schedule all events that will be disrupted otherwise.

#### Before You Begin

To see and use the Settings tab, you must be logged in an administrator.

#### Procedure

Step 1 Choose Settings > Media Delivery, and then choose the options that meet your requirements.

Step 2 Click Save.

#### Related Topics

- [UI Reference: Elements for Defining ACNS or WAAS Settings](#)

#### UI Reference: Elements for Defining ACNS or WAAS Settings

Table 3-33 Elements for Using ACNS

Element	Description
Would you like to configure settings for ACNS or WAAS at this time?	Either Yes or No. <ul style="list-style-type: none"> <li>• Yes — You will use either ACNS or WAAS as your content distribution methods.</li> <li>• No — You will not use either of these methods.</li> </ul>
<b>ACNS</b>	
CDM Address	The routable IP address or resolvable DNS hostname of the appliance or services module ("blade") that runs ACNS and Content Distribution Manager software.
Port	The TCP port for login access to CDM. The port number by default is 8443.
User	The username for login access to CDM.
Password	The password that corresponds to the CDM username that you entered.
<b>WAAS</b>	
User	The username for mounting the CIFS share.
Password	The password for mounting the CIFS share.
Share	The name of the CIFS share.
Hostname or IP address	The hostname or IP address of the CIFS share server.

#### Related Topics

- [Configuring the Settings to Use ACNS or WAAS](#)

### Configuring the Settings to Deploy to External Servers

You can configure DMM-DSM to deploy to external servers, but only within these operating parameters:

- The only supported server type is FTP in this release.
- You cannot use the Schedules > Play Now feature with external deployment servers.
- All deployments to your external deployment servers require that you use the Schedules > Play in Future feature.

#### Before You Begin

To see and use the Settings tab, you must be logged in an administrator.

#### Procedure

Step 1 Choose Settings > External Deployment Locations, and then choose options to meet your requirements.

Step 2 Click Save.

### UI Reference: Elements for Configuring External Deployments

Table 3-34 Elements to Configure Deployments to External Servers

Element	Icon and Description	
External Publishing Server List		
<i>Add, select, edit, or delete external deployment (FTP) servers. Click a server to highlight it, so that you can edit or delete it. DMM-DSM automatically shows the Change External Publishing Server pane for the corresponding server, where you can edit its settings.</i>		
Add New External Publishing Server		Shows the Add New External Publishing Server pane, where you can define the settings to use a new server.
Delete External Publishing Server		Deletes the server that you highlighted.
{Add New   Change} External Publishing Server		
<i>Add or edit attributes of the external servers that you use for deployments. Each of your external publishing servers must run the necessary services to function both as an http server and as an ftp server. In addition, the root-level directory for ftp must be equal to or under the root-level directory for http. For example, you might use /wwwroot for http and /wwwroot/ftproot for ftp.</i>		
Host	The routable IP address or resolvable DNS hostname of the external deployment (FTP) server. You must enter this value.	
Port	The port number to use. You can use any port number, but the default is 21.	
Server Type	FTP.	
Remote Directory	Corresponding to the same server directory structure that you reference when you enter an HTTP Mapping value (see the row below this one), enter the root-level deployment directory to use on your external publishing server when your communications protocol is ftp. For example, you might enter only a forward slash (/).	
HTTP Mapping	Corresponding to the same server directory structure that you reference when you enter a Remote Directory value (see the row above this one), enter the root-level deployment directory to use on your external publishing server when your communications protocol is http. For example, you might enter /ftproot.	
HTTP Port	Enter the port number to use on the external deployment server. You can use any port number. If you do not enter a port number, the default is to use port 80.	

User Name	Enter the FTP username. It is acceptable to use the name <i>anonymous</i> .
Password   Confirm Password	You must enter the FTP password, and then reenter it.

## Common Scenarios for Using DMM-DSM

This section describes common scenarios for using DMM-DSM.

- [Uploading Files to a DMP for Local Storage and Immediate Deployment](#)

### Uploading Files to a DMP for Local Storage and Immediate Deployment

You can create a presentation that shows video files from a playlist, and then transfer the presentation and its assets to the local Secure Digital (SD) flash memory card in a DMP for playback on its attached DMP display.

**Note** • The total amount of available file space for local storage is:

- 0.9 GB (900 MB) on a DMP 4300G.
- 1.9 GB on a DMP 4305G.
- 3.8 GB on a DMP 4400G.

Consider these SD memory card capacities carefully when you make designs for use during stage-one failover. The combined file size for all assets in such designs cannot exceed the storage capacity of the SD card. To check the free space on the SD memory card in a DMP, log in to its local instance of DMPDM, and then click **Internal Storage**. To understand failover, see the "Understanding Content Substitution (Failover)" topic in *User Guide for Cisco Digital Media Player Device Manager 5.1.x* on Cisco.com.

- A presentation cannot play *any* file with a file size greater than 1.9 GB on a DMP, regardless of its model type. This size is constrained by the limits of streaming.

### Before You Begin

To learn how to create a playlist in Digital Media Designer, so that you can show the playlist as part of a presentation, see [Creating and Organizing Presentation Playlists](#).

### Procedure

**Step 1** To create an advanced task that will transfer the assets for your playlist anywhere in your digital signage network, choose **Digital Media Players > Advanced Tasks > File Transfer to DMP or Server**, and then do the following:

- Click  **Add New Application**, and then enter a name for the new file transfer task in the Name field; for example, you might enter the name *LocalPublishing*.  
You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
- In the Applications list, click **Presentation or Playlist**.
- In the Available Content table, click a row to highlight the presentation, and then click  **Select Applications**. Doing this moves the highlighted presentation to the Selected Content table, so that its assets become available for deployment.
- To save your work, click **Submit**.

**Step 2** To deploy the file transfer task to a DMP or DMP group, select **Schedules > Play Now**, and then do the following:

- From the DMP Groups object selector, select the DMP or DMP group that should receive the deployment.
- From the Actions list, select the name of the advanced task that you configured and saved for this file transfer operation, and then click **Go**.

DMM-DSM deploys the assets and commands immediately to the DMPs that you selected, and the targeted DMPs restart automatically.

**Note** • After they restart, your DMPs will **not** show the newly received presentation automatically on their attached DMP displays. The presentation will not play unless stage-one failover occurs or until you deploy the (Go to) URL task that DMM-DSM generated automatically when you deployed assets to the SD memory card.

- After you create and deploy any "File Transfer to DMP or Server" task to save the assets from a DMD presentation to the SD memory card inside a DMP, DMM-DSM automatically creates a (Go to) URL task.

The name by default for the (Go to) URL task is "LOCAL - <name\_of\_presentation>" unless you checked the Emergency/Alarm check box, in which case it is "ALARM - <name\_of\_presentation>."

If any of your DMPs should show the presentation at any time other than during stage-one failover, you must deploy the corresponding (Go to) URL task to those DMPs. See [Scheduling Time Slots for Media and Events on DMPs](#).

- After you delete a presentation for which DMM-DSM automatically generated a corresponding (Go to) URL task, you must also delete that (Go to) URL task.

## Integrating Third-party Applications with DMM-DSM

Cisco Digital Signage is an open and standards-based platform, and Cisco DMS ecosystem business partners and technology development partners are building new methods to extend what your DMPs can do. Contact a Cisco sales representative to learn more about potential new uses for your DMPs, such as:

- Smart signage:
  - Way-finding signs that use RFID.
  - Audience-measuring signs that use video analytics for gaze recognition.
- Conference room management.
- Line queuing.
- Representing dynamic data in real time, such as international currency rates.
- Regional call center signs that correlate real-time caller statistics with service level targets globally.
- Environmentally protected outdoor signage.
