

MindEdge LearnWell Design Video Transcription

MindEdge learning serves colleges and universities by successfully engaging students through innovative technology. Our online courses are an affordable way to improve outcomes in your classes. All MindEdge courses have a range of activities, from games and assessments, to discussion forums, and a collaborative writing pad resource. If your students prefer to print, they can do that too. You will always have full visibility into your student engagement and performance with MindEdge's integration options, data tracking, and dashboard. Accessibility is a long-standing MindEdge priority and all content is developed with your entire student body in mind. Adaptive learning segments target common pain points, allowing struggling students to drill down to find more exercises, more videos, and more opportunities to practice. The MindEdge mobile app allows for on-the-go learning and offline capabilities for the long train ride or the weekend camping trip. MindEdge content editors are available for a full range of services and consultations to ensure courses align with your learning outcomes and our IT staff can assist with integrating into your learning management system for optimal grade syncing and data tracking. Replace your traditional textbooks with our courses. Contact us today to discuss your needs.
